

Docket # 00D-1598, 00N 1396
From Heidi Grant

Dear FDA Commissioner -

It is time that we start airing on the side of caution and slow down efforts towards biotech. We truly do not know ~~the side effects~~ and potential problems that may arise if such genetically altered products are not put to the test of time and scrutiny they deserve. Furthermore, what happens if these problems do arise after we've spread such seeds all over and they've mixed and hybridized with organics. There will be no going back. Please, let's proceed more slowly. I think we will decide ultimately that GMO's are no good for us or the environment. ~~Thanks,~~
Heidi
