

TABLE 1. A SUMMARY OF ATLANTIC MARINE MAMMAL STOCK ASSESSMENT REPORTS FOR STOCKS OF MARINE MAMMALS UNDER NMFS AUTHORITY THAT OCCUPY WATERS UNDER USA JURISDICTION. The “SAR revised” column indicates 2000 stock assessment reports that have been revised relative to the 1999 reports (Y=yes N=no). If abundance, mortality or PBR estimates have been revised, they are indicated with the letters “a”, “m” and “p” respectively.

1. Total mortality includes 57 harbor porpoises from the Canadian sink gillnet and herring weir fisheries.
2. Mortality data are not separated by species; therefore, species-specific estimates are not available. The mortality estimate represents both Atlantic and Pantropical spotted dolphins
3. Estimates may include sightings of the coastal form.
4. This estimate may include both the dwarf and pygmy sperm whales.
5. This estimate includes Cuvier's beaked whales and undifferentiated *Mesoplodon* spp. beaked whales.
6. This is the average mortality of undifferentiated beaked whales (*Mesoplodon* spp.) based on 5 years of observer data. This annual mortality rate includes an unknown number of Cuvier's beaked whales.
7. This estimate may include both long-finned and short-finned pilot whales.
8. Mortality data are not separated by species; therefore, species-specific estimates are not available. This mortality estimate represents both long-finned and short-finned pilot whales. Total annual mortality includes Nova Scotia 94-96 average of 9 long-finned pilot whales.
9. This is the average mortality of right whales based on 5 years of observer data (0.0) and additional fishery impact records (0.6).
10. This is the average mortality of humpback whales based on 5 years of observer data (0.25) and additional fishery impact records (2.4).
11. This is based on a review of NMFS anecdotal records from 1994-1998, that yielded an average of 0.8 human caused mortality - 0.6 ship strikes, 0.2 fishery interactions.
