

**LOGICAL IFTHEN****PURPOSE**

Carry out the logical if-then of 2 variables where true values are coded as 1 and false values are coded as 0.

**DESCRIPTION**

Logical if-then means that the result is false when the first input value is true and the second input value is false. Otherwise, the result is true. For example, the logical if-then of the 4-element variable 1 1 0 0 and the 4-element variable 1 0 1 0 is the 4-element variable 1 1 0 1. The logical sequence T F T F T T F F F T F T (T = true, F = false) can be coded as a "logical" variable as follows:

```
LET Y = DATA 1 0 1 0 1 1 0 0 0 1 0 1
```

For long sequences, you can use the SERIAL READ command. The IND function can be helpful in converting a numeric variable that is not coded with 0 and 1's to one that is.

**SYNTAX**

```
LET <v3> = LOGICAL IFTHEN <v1> <v2> <SUBSET/EXCEPT/FOR qualification>
```

where <v1> is the first variable;

<v2> is the second variable;

<v3> is the resultant variable;

and where the <SUBSET/EXCEPT/FOR qualification> is optional and rarely used in this context.

**EXAMPLES**

```
LET Y3 = LOGICAL IFTHEN Y1 Y2
```

**DEFAULT**

None

**SYNONYMS**

None

**RELATED COMMANDS**

LOGICAL AND	=	Carries out a logical and.
LOGICAL OR	=	Carries out a logical or.
LOGICAL NAND	=	Carries out a logical negative and.
LOGICAL XOR	=	Carries out a logical xor.
LOGICAL IFF	=	Carries out a logical if-and-only-if.
LOGICAL NOT	=	Carries out a logical not.

**APPLICATIONS**

Mathematics

**IMPLEMENTATION DATE**

87/10

**PROGRAM**

```
LET Y1 = DATA 1 1 0 0
LET Y2 = DATA 1 0 1 0
LET Y3 = LOGICAL IFTHEN Y1 Y2
SET WRITE DECIMALS 0
WRITE Y1 Y2 Y3
```
