

**EXPINTN****PURPOSE**

Compute the exponential integral of order n.

**DESCRIPTION**

For positive x, the exponential integral of order n is defined as:

$$E_n(x) = \int_1^{\infty} \frac{e^{-xt}}{t^n} dt \quad x > 0 \quad (\text{EQ Aux-136})$$

**SYNTAX**

LET <y> = EXPINTN(<x>,<n>)

<SUBSET/EXCEPT/FOR qualification>

where <x> is a non-negative number, variable, or parameter;

<n> is a positive integer number, parameter, or variable;

<y> is a variable or a parameter (depending on what <x> and <n> are where the computed integral values are stored; and where the <SUBSET/EXCEPT/FOR qualification> is optional.

**EXAMPLES**

LET A = EXPINTN(0.1,2)

LET A = EXPINTN(2,4)

LET X2 = EXPINTN(X,N)

**NOTE 1**

If n is 1, then x cannot be zero. For n > 1,  $E_n(0) = 1/(n-1)$ .

**NOTE 2**

DATAPLOT uses the routine EXINT from the SLATEC Common Mathematical Library to compute this function. SLATEC is a large set of high quality, portable, public domain Fortran routines for various mathematical capabilities maintained by seven federal laboratories.

**DEFAULT**

None

**SYNONYMS**

None

**RELATED COMMANDS**

EXPINT1	=	Compute the exponential integral of order 1.
EXPINTE	=	Compute the principal value of the exponential integral.
ERF	=	Compute the error function.
SININT	=	Compute the sine integral.
COSINT	=	Compute the cosine integral.
LOGINT	=	Compute the logarithmic integral.
