

**SININT****PURPOSE**

Compute the sine integral.

**DESCRIPTION**

The sine integral is defined as:

$$\text{Shi}(x) = \int_0^x \frac{\sinh(t)}{t} dt \quad (\text{EQ Aux-304})$$

**SYNTAX**

LET <y> = SININT(<x>)

<SUBSET/EXCEPT/FOR qualification>

where <x> is a number, variable, or parameter;

<y> is a variable or a parameter (depending on what <x> is where the computed cosine integral values are stored; and where the <SUBSET/EXCEPT/FOR qualification> is optional.

**EXAMPLES**

LET A = SININT(0.1)

LET A = SININT(-0.1)

LET X2 = SININT(X)

**NOTE**

DATAPLOT uses the routine SICIEI written by Irene Stegun and Ruth Zucker of NIST (see the REFERENCE section below).

**DEFAULT**

None

**SYNONYMS**

None

**RELATED COMMANDS**

COSHINT	=	Compute the hyperbolic cosine integral.
COSINT	=	Compute the cosine integral.
SINHINT	=	Compute the hyperbolic sine integral.
EXPINTN	=	Compute the exponential integral of order N.
LOGINT	=	Compute the logarithmic integral.
DAWSON	=	Compute Dawson's integral.
