

TJNAF Fourth Quarter CY 2004

Quarterly ORPS Performance Analysis

The most recent quarterly analysis for the DOE Occurrence Reporting and Processing System (ORPS) was performed on December 22 and 23, 2004. The analysis consisted of a review of both reportable and non-reportable events during the past 12-month period. Note - Jefferson Lab is in a holiday shutdown period from December 24, 2004 through January 2, 2005.

Examples of internal events reviewed beside ORPS reportable events include recordable injuries, first aid cases, line self assessment reports, independent EH&S/operational assessments, Price-Anderson reports submitted to the DOE Noncompliance Tracking System (NTS), daily accelerator operating summaries, and event reports submitted for internal Lessons Learned consideration. This quarterly analysis did not identify any trends or recurring issues from the past 12-month period requiring ORPS reporting.

Fourth Quarter CY 2004 (October - December) Internal Events Reviewed

ORPS Reports - 0

Price-Anderson Reports - 0

Recordable Injuries/Illnesses - 0

First Aid Cases - 9

Line Self Assessments - 5

Independent Quarterly Assessments - 1

Radiation Safety Reports - 3

Daily Accelerator Operating Summaries - 73

Notable Event Reports (reports submitted for internal lessons learned consideration) - 3
