PEARS

Cool, wet weather during bloom resulted in very poor pollinating conditions for the 2007 Connecticut **pear** crop. Warmer temperatures and timely rains followed in May, providing good growing conditions. Late June storms brought hail,

causing significant damage in some orchards. July and August were drier than previous months. Harvest was

complete by mid-October, in line with last year and normal. Crop specialists rated fruit size "average" and the pear crop in good to fair condition throughout the growing season. Utilized pear production in Connecticut totaled 1,000 tons in 2007, unchanged from the previous year. The value of the 2007 pear crop was estimated at \$1.3 million, 18 percent above the previous year's level.

PEARS: Production and Value, 1998 - 2007

| State and Year | Production | | Utilized Price | Value of |
|----------------|--------------------|-----------------------|----------------|---------------------|
| | Total ¹ | Utilized ² | per Ton | Utilized Production |
| | Tons | | Dollars | 1,000 Dollars |
| Connecticut | | | - | • |
| 1998 | 1,100 | 1,100 | 775 | 853 |
| 1999 | 1,050 | 950 | 775 | 736 |
| 2000 | 1,250 | 1,250 | 562 | 703 |
| 2001 | 480 | 480 | 644 | 309 |
| 2002 | 500 | 500 | 858 | 429 |
| 2003 | 1,300 | 1,270 | 1,000 | 1,270 |
| 2004 | 900 | 900 | 800 | 720 |
| 2005 | 1,000 | 1,000 | 952 | 952 |
| 2006 | 1,000 | 1,000 | 1,100 | 1,100 |
| 2007 | 1,000 | 1,000 | 1,300 | 1,300 |

¹ Total production is the quantity actually harvested plus quantities which would have been acceptable for fresh market or processing but were not harvested because of economic or natural reasons.

² Utilized production is the amount sold plus the quantities used at home or held in storage.
