

## MILK PRODUCTION

When combining all six states, New England ranked eleventh in the nation for milk production with almost three percent of the United States milk supply in 2000. Milk production in New England during 2000 totaled 4.66 billion pounds slightly less than 1999's total production of 4.69 billion pounds. The annual average number of milk cows was 267,800 which was down three

percent from the 1999 average. Annual production per cow averaged 17,417 pounds of milk in 2000 which set another new record high for milk rate per cow in New England. Cash receipts from the sale of milk during 2000 totaled 643 million dollars, almost 12 percent below the previous year's amount. New England dairy producers received an average \$13.96 per hundredweight (cwt) for all milk sold to plants in 2000, a \$1.75 per cwt decrease from the previous year.

<sup>1/</sup> Milk sold to plants and dealers as whole milk and equivalent amounts of milk for cream. Includes milk produced by dealers' own herds and small amounts sold directly to consumers. Also includes milk produced by institutional herds. <sup>2/</sup> Percentage of milk sold that is eligible for fluid use (grade A for fluid use in most states). Includes fluid-grade milk used in manufacturing dairy products. <sup>3/</sup> Cash receipts divided by milk or milkfat in combined marketings.
