CRANBERRIES

Cranberry production in Massachusetts totaled 1.97 million barrels in 2006, a 39 percent increase from the previous year's production. Growers harvested 14,000 acres, 100 fewer than in 2005. This year's crop yield averaged 140.9 barrels per acre an increase of 40 barrels per

acre from a year earlier. Most Massachusetts cranberry farmers reported a good growing year. Timely rain showers fell throughout the growing season which reduced the necessity to irrigate. Cool nights in early October helped cranberries turn color. Cranberry size was reported as medium, while the condition of the crop was reported as good-to-excellent.

Weighted average of co-op and independent sales. Co-op prices represent pool proceeds less returns for processing non-cranberry products, capital stock dividends, capital stock retains and other retains.

^{2/} A barrel weighs 100 pounds.

^{3/} Fresh and processed prices not available prior to 2000.
