

FARM NUMBERS

The New England farm count for 2006 totaled 27,950 farms, unchanged from 2005. In 2006, New England land in farms totaled 3.99 million acres compared with 4.01 million acres the previous year. An estimated 20,000 acres were lost from agriculture in both Maine and Vermont from a year earlier; however, number of farms remained unchanged in those states. Maine accounted for the most area devoted to farmland in the region in 2006 with 1.36 million acres, followed by Vermont with 1.24 million acres.

The average size of a farm in New England was 143 acres in 2006, ranging from 71 acres per farm in the highly populated state of Rhode Island to 197 acres per farm in the dairy state of Vermont. New England farm operations with less than \$10,000 in sales totaled 18,540 farms in 2006, or 66 percent of all farms operating, unchanged from a year earlier.

The definition of a farm has remained the same since 1974: any place which produced and sold, or normally would have produced and sold, \$1,000 worth of agricultural products during the year. Activities included as agriculture, however, have undergone modifications in recent years. In the years since 1997, commodities are defined as agriculture based on the 1997 North American Industry Classification System (NAICS) as jointly developed by the United States Office of Management and Budget, Statistics Canada, and the Mexican Institute of National Statistics. Land in farms includes crop and livestock acreage, wasteland, woodland, pasture, land in summer fallow, idle cropland, land enrolled in the Conservation Reserve Program and other set aside or commodity acreage programs. It excludes public, industrial, and grazing association land and nonagricultural land. For further details concerning the farm definition history, please access the NASS website www.nass.usda.gov.

^{1/} Any establishment from which \$1,000 or more of agricultural products were sold or would normally be sold during the year. Commodities are defined as agriculture based on the 1997 North American Industry Classification System (NAICS).

^{2/} Beginning in 1998 Farm Operations and Land in Farms were recalculated to the 2002 Census of Agriculture to account for under coverage (i.e. farms that were not on the mailing list). Years prior to 1998 were not reweighted.

^{3/} Average farm real estate value of land and buildings.

^{4/} Average cropland value is only available for the six New England states, combined.

^{5/} Average pasture value is only available for the six New England states and Delaware, combined.
