

**The Human Health Impact of Fluoroquinolone Resistant  
Campylobacter Attributed to the Consumption of Chicken**

**Food and Drug Administration  
Center for Veterinary Medicine**

**Document Date:  
October 18, 2000**

**Revised:  
January 5, 2001**

## Table of Contents

Acknowledgements

Introduction.....I-1 to I-13

Overview of Document.....O-1 to O-9

### **Section 1**

Nominal mean reportable *Campylobacter* culture confirmed cases .....1-1 to 1-12

### **Section 2.**

Nominal mean *Campylobacter* cases in the U.S.....2-1 to 2-7

### **Section 3**

Nominal mean number of fluoroquinolone resistant *Campylobacter* cases attributable to chicken, seeking care, treated with a fluoroquinolone and therefore affected by the fluoroquinolone resistance.....3-1 to 3-20

### **Section 4.**

Estimating the quantity of fluoroquinolone-resistant *Campylobacter* contaminated chicken meat consumed .....4-1 to 4-6

### **Section 5.**

Using the model to measure the level of risk.....5-1 to 5-21

Appendix A. Distributions used in uncertainty analysis.....A-1 to A-9

Appendix B. List of Assumptions and Limitations of Data.....B-1 to B-5

References.....R-1 to R-8

## Acknowledgements

We have received assistance and comments from numerous individuals and agencies, and we specifically recognize the following individuals who made significant contributions to this risk assessment.

\*David Vose

†Katherine Hollinger

†Mary Bartholomew

†Sharon Thompson

†Carole Andres

†Deborah Brooks

†Kathy Hemming
