

## **Fuels Management**

This sessions offers an overview of the petroleum industry following the life-cycle of oil from production fields, through pipelines, refineries, terminals, service stations, tankers, and rail and truck transport. Past, present, and future trends in the industry will be discussed in detail, with specific examples of response and remediation projects.

The federal regulatory framework is highlighted, with special emphasis on how and why activities are coordinated with state and local regulators. The session will include an open discussion of EPA's regulatory approach to solving the environmental problems associated with the industry.
