National Incident Radio Support Cache (NIRSC) Users Guide:

The 2006 all-risk season supported fires, law enforcement, forest pest management, military communications, support to National Communication System (ESF2), ongoing technical support to the EPA, as well as several overseas projects in Honduras and Australia.

While it wasn't the largest season for incident communication resources orders, there were some challenges.

- * The Cache operated 100% VHF narrowband for the third year
- * 207 Starter Systems and 900 issues were deployed from the National Cache
- * 600 hours and 1300 missions of infrared detection and mapping flights
- * Both Infrared aircraft were equipped with Phoenix Infrared Systems

It is important that all personnel involved in incident communications keep themselves up-to-date on the changes in equipment and technology. As an example, all National Cache VHF systems are operating in the narrowband analog mode. Several courses are scheduled for this year. I recommend that any Communications Unit Leaders that have not been out for a few years, or Communications Unit Leaders and Communications Technicians who would like some first hand experience with the equipment, give Mark Hilton, Chief, Branch of Technical Training a call at 208-387-5707 and reserve a slot in one of our seminars.

I thank all of you for the work that you do in incident communications. Your role is vital and brings together all the functions under the Incident Command System. Thanks for your dedication and hard work.

If you have any questions for the National Incident Interagency Communications Division, please feel free to call me at 208-387-5485 or the Communications Duty Officer at (208) 387-5644 or the toll free number at 1-877-775-3451.

E-mail: sjenkins01@fs.fed.us.

Sincerely,

/s/ **Stephen M. Jenkins**

Stephen M. Jenkins
Chief
National Interagency Incident Communications Division

This publication is revised annually by the National Interagency Incident Communications Division, National Interagency Fire Center at Boise, Idaho.

INTRODUCTION

This booklet is designed to aid in the evaluation of incident communications needs for users of the National Incident Radio Support Cache (NIRSC).

To use this guide:

1. Read the descriptions of incident communications conditions. Find those most closely reflecting your needs.
2. Each description corresponds to one or more drawings showing general and special purpose equipment applications. Match the condition to the drawing and verify the equipment specified will meet your needs.
3. When ordering equipment from the NIRSC, use the NFES catalog numbers indicated on the drawings or in the descriptions section of this booklet. The NFES numbers must appear on your Resource Order. One request number per kit only.
4. The National Interagency Incident Communications Division Communications Duty Officer (NIICD-CDO) is available 24 hours per day year around. NIICD-CDO personnel provide ordering and planning assistance and are an information resource for field communications personnel. At a minimum, communications personnel should check in with the NIICD-CDO upon arrival at incident to provide assignment location and phone number. All provided information is logged and updated daily.

NOTE: Those communications personnel not familiar with NIRSC equipment or who are not experienced are required to contact the NIICD-CDO for assistance. See NIICD ASSISTANCE NUMBERS (p. 3) for phone listings.

NEW FOR 2007

Changes are being made to NFES 4312 Command Repeater Kits. As these units are refurbished, all of the UHF Link Hardware and necessary ancillary link equipment, will be pre-installed. These kits will now be known as NFES 4312 Command Repeater/Link. NFES 4253 UHF Link Kits will still be available in limited numbers. NFES 4390 Starter Systems that are currently pre-positioned DO NOT have link hardware in their NFES 4312 Command repeaters. Contact the NIICD-CDO when ordering NFES 4253 UHF Link Kits.

Radio passwords have been changed to all zeroes for the 2007 Fire Season.

All NIFC VHF-FM frequencies continue to be in narrowband configuration.

NIICD has 10 Technisonic TDFM-136 aviation VHF-FM radios configured specifically for homeland security/law enforcement support. These radios are P25 digital compliant. However, they are not capable of being encrypted. The only difference between these 10 homeland security radios and the remaining NIICDs TDFM-136 radios is that the homeland security radios are NVG compliant.

MAFFS Base Station kits now have 10 King EPH radios.

NIRSC ASSISTANCE NUMBERS

The numbers listed below are for your general use for assistance from the staff at the National Interagency Incident Communications Division (NIICD) and the National Incident Radio Support Cache (NIRSC) at NIFC.

CDO:Phone:(208) 387-5644 for incident related business only. All other calls to the NIICD should be directed to individual division numbers

Toll Free: 1-877-775-3451
Fax: (208) 387-5892

For specific assistance from the National Interagency Incident Communications Division, use the following numbers: area code (208)

DIVISION NUMBERS:

Branch of Communications Maintenance:	387-5856
Branch of Communications Operations:	387-5947
	387- 5858
Branch of Engineering and Development:	387-5720
Branch of Infrared:	387-5647
Branch of Rework:	387-5645
Branch of Avionics:	387-5648
Branch of Technical Training:	387-5707

NATIONAL AIR FREQUENCY GUIDELINES

These guidelines are intended to clarify the use of the National VHF-FM Air Frequencies and the VHF-AM (Victor) frequencies. Each is authorized for specific uses, even though they are listed as “national”.

AIR GUARD FREQUENCY

There is one common air guard frequency - 168.6250. It is found on the last channel of all NIRSC radios. This frequency is authorized for:

1. Emergency air-to-air initial contact.
2. Emergency ground-to-air communications.
3. Initial call, recall and redirection.

NATIONAL FLIGHT FOLLOWING

There is one common national flight following frequency - 168.6500.

This frequency is authorized for:

1. Flight-following, dispatch, and/or re-direction of aircraft.
2. Air-to-ground and ground-to-air administrative traffic.

(This frequency is not authorized for ground-to-ground traffic.)

VHF-FM

In the NIRSC radios, national VHF-FM air frequencies are located in GROUP 3. These frequencies have specific uses. Prior to use, you **MUST** contact the NIICD-CDO.

VHF-AM (Victor)

There are FIVE national AM frequencies. The use of these frequencies is restricted to air operations only, **no exceptions!** These frequencies are assigned to specific functions. For additional VHF-AM frequencies, the COML should make requests through the next higher authority. In multi-incident situations, this contact would be the Communications Coordinator (COMC). If no COMC has been assigned, contact the NIICD-CDO. The NIICD-CDO is authorized to obtain additional VHF-AM frequencies for the GACCs (Geographic Area Coordination Center) which will then assign those frequencies.

NOTE: All Aviation Frequencies Will Be Ordered Through the Dispatch Ordering System to the NIICD-CDO.

FOREST HEALTH PROTECTION PROJECTS

The NIRSC supports the Forest Health Protection Program with basic communications equipment. The NIRSC can be contacted with requirements or needs to customize an order to ensure it will be properly placed with the NIFC National Interagency Coordination Center (NICC).

All requests for equipment must be submitted through the local dispatch office and the Geographic Coordination Center, then to NIFC-NICC. Preliminary letters will be accepted by the NIRSC for informational purposes only, as will e-mail messages to sjenkins01@fs.fed.us. ***Equipment will not be issued against the letter or e-mail.*** A Resource Order, placed through the formal ordering process, is necessary.

The NIICD-CDO will assist FHP users with system design information, layout and ordering, in order to meet the specific requirements of each particular project. Users are requested to contact the NIRSC at least 1-2 months in advance of a project(s) to allow for sufficient design, implementation and ground shipping of equipment.

The following equipment is available from the NIRSC:

- 4381 VHF radios (16/kit)
- 4312 Command Repeater/Link
- 4300 Ground Aircraft Base Kit (base station only)
- 4330 Remote Kit

The above NFES items are the standard kits to support FHP projects. Other types of equipment are available if the project has unusual requirements. These other kits are described under the section EQUIPMENT DESCRIPTIONS in this catalog.

Radios are issued in kits of 16 each, but can be supplemented with individual radios if needed. It is preferred that radios be ordered in kit lots of 16. The radios will come with full, reusable clamshells which use AA batteries, plus one change of AA batteries for each radio. Please return the reusable clamshells with the kit. If you require additional batteries, above what is provided in the kit, place a resource order for NFES# 0030, AA batteries, or purchase the batteries locally.

The radios will be pre-programmed with NIRSC command/tactical frequencies. However, given sufficient time, the NIRSC will custom program frequencies in each channel. The repeater frequencies must remain as they are assigned.

The FHP equipment in the NIRSC must be shared with many FHP users. It is requested that required time frames for project use be kept to a minimum. When the project is completed, please expedite shipment of the equipment back to the NIRSC. The requesting user will pay for shipping to and from the NIRSC. There is a charge for equipment repair and parts. Costs for use of the equipment include replacement of batteries and lost kit accessories or capitalized equipment.

GENERAL INFORMATION ABOUT RADIO BATTERIES

When ordering batteries, round the order to the next full STD PK. (See Standard Pack -- STD PK--entry in the Radio Battery Matrix or see listing in the GENERAL SECTION of the NFES Catalog under Battery, Radio.)

Alkaline batteries are not considered hazardous waste, except in California. These batteries should be disposed of at the incident.

All of the radio batteries utilized in the NIRSC are of alkaline technology. Alkaline batteries should have a shelf life of two years with only about 10% degradation in power. The batteries, for our application, can probably be stored in our application for four years, however the life will be noticeably shorter.

Repeater batteries should last 5-7 days under heavy usage. Radio batteries should easily last a shift (usually 12 hours).

Battery life with the clamshell-type battery will depend entirely upon the AA cells installed, and the type of radio used. The new P25 radios use more batteries than the analog radios.

Using a voltmeter to determine the state of an alkaline battery can yield very inconsistent results. A battery that no longer works on a repeater and has not had a load placed on it for a few days may read good on a voltmeter (a voltmeter does not apply the proper current load). To test the batteries in a repeater with a voltmeter put the repeater in transmit condition to apply a load to the batteries to get a correct reading.

UHF/VHF Repeaters -- replace batteries if the voltage is at 10.5 volts with the transmitter operating. Starting voltage is about 15 volts with the transmitter operating.

RADIOS -- The transmit LED is the best indicator of battery life. If the light holds bright for 3 seconds while transmitting, the battery should be in good shape. Don't rely on the battery gauge on the Racal radio since it is designed for use with the Lithium-Ion rechargeable battery.

RADIO/REPEATER BATTERY MATRIX

CLAMSHELLS: NFES #5083 for ICOMS (12/box) Return KIT clamshells!
 NFES #1034 for KINGS (12/box) Return KIT clamshells!
 NFES #4165 for RACAL (each) Return KIT clamshells!
 NFES #4231 for EFJOHNSON 5100 (each) Return KIT clamshells!
 NFES #4541 for MOTOROLA XTS-3000/DATRON
 GUARDIAN 25 (each) Return KIT clamshells!

Frequently used batteries are listed below by type and NFES #.

NFES#	0030	1023	1233
VOLTAGES	1.5V	7.5V	6V (Hotshot)
STD. PK.	24/PG	4/BX	4/BX
RADIOS			
ICOM (clam)	10		
KING (clam) 9-cell (VHF/UHF)	9		
RACAL (clam)	10		
XTS-3000/5000, EFJ 5100, DATRON GUARDIAN 25 (clam)	12		
KITS			
GRND A/C 4370, 4300	80	4	
P.A. 4410			2
REMOTE 4330		2	2
REPEATERS & LINKS 4248, 4253, 4312, 4281		4	

**MOST BATTERY DISPOSAL SHOULD BE HANDLED AT THE
 INCIDENT TO SAVE SHIPPING COSTS.**

COMMUNICATIONS COORDINATOR (COMC)

Duties and Responsibilities

1. Manages the allocation of communications resources at the Geographic Area level. This includes communications equipment, communications personnel and associated supplies. The COMC reports to the NIICD-CDO and directly supports the assigned Geographic Area. COMC's will not be assigned to specific incidents or to Area Command. Orders for this position should originate from the requesting Geographic Area. The order then will go to NICC who will then forward the order to the NIICD-CDO to be filled.

Situations may occur when communications coordination is required between multiple Geographic Areas. Under these circumstances a COMC may be assigned to a NICC resource order to provide overall coordination and support to COMC's assigned to the affected Geographic Areas.

2. Manages the frequency resources for all incidents under assigned jurisdiction. This includes all frequencies for ground tactical, command, logistics, and air operations.

NOTE: During complex situations, the COMC will request additional qualified personnel to be assigned as field COMC's. Any situation involving large air operations will require that the Communications Coordinator (COMC) request an Aviation Frequency Coordinator just for air operations.

3. Maintains an accurate inventory of all communications equipment assigned to complex(es) under their control. This includes equipment assigned to all incidents within the complex(es).

4. Keeps current on the availability of communications resources for future Geographic Area and National requirements. The COMC should be current on procedures needed to obtain such resources. Maintains daily contact with NIICD-CDO.

NOTE: This may entail pooling Communications Technicians (COMT) from existing incidents to better utilize this resource.

5. Provides problem solving recommendations and advice on communications issues to the respective Geographic Area Coordinators, the Area Coordinators, the Area Command Teams managing an incident complex, and/or to incident management teams within a complex or an incident. National as well as geographic area priorities will be considered when making recommendations and/or providing advice.

6. Provides the incidents with assistance in obtaining specialized communications equipment.

NATIONAL INCIDENT RADIO SUPPORT CACHE

The information outlined below must be considered when ordering and using NIRSC equipment. All NIRSC frequencies, both UHF and VHF, must be cleared for use BEFORE shipment is made. Frequencies are cleared by the NIICD-CDO.

STARTER SYSTEMS (NFES #4390):

A starter system consists of 10 boxes of assorted equipment, and is ordered as a system. A starter system contains 1 VHF repeater/link and 1 UHF repeater. Generally the frequency assignments for these repeaters will be one of the standard VHF command assignments (C1 through C7) and one of the standard UHF assignments (L1 through L7).

When ordering a starter system, appropriate frequency assignments must be obtained by contacting the NIICD-CDO or the appropriate COMC when assigned. The resource order will indicate which frequency pair has been assigned as in the following example (C4/L4). When possible please provide a Latitude and a Longitude for each repeater set up in the field. Starter Systems may not always contain 10 kits and 8 sets of masts (due to equipment availability).

NOTE: In areas with extreme frequency congestion, the NIICD-CDO or COMC will advise incidents/COMCs of available frequencies.

LOGISTICS SYSTEM:

A Logistics System is a part of every Starter System. It consists of 1 UHF Logistics Repeater and 1 kit of 16 UHF Logistics radios. If you do not need logistics equipment, you MUST order command equipment by individual kit catalog numbers.

ADDITIONAL REPEATER:

When needed for an incident, the request will be evaluated and supported with another single frequency repeater. Order as a single resource item:

Command Repeater/Link - NFES #4312; Logistics Repeater - NFES 4248.

USER'S GUIDE (NFES #0968):

The User's Guide is located in all Command Repeater/Link Kits (NFES #4312) and can also be ordered through the Great Basin Warehouse (GBK).

COMMUNICATIONS DUTY OFFICER:

The NIICD-CDO, as much as possible, will maintain compatibility of new equipment orders with equipment already on an incident.

DEMOB:

All cache equipment must be returned to the NIRSC after each incident, for re-work.

FIELD ASSISTANCE:

The NIICD-CDO will coordinate field assistance for incidents. The NIICD-CDO can be contacted at(208) 387-5644 or toll free 1-877-775-3451.

(4305) MAST, ANTENNA

The following kits come with at least one set of three masts.

- 4248 Log Repeater
- 4312 CMD Repeater/Link (2 sets)
- 4330 Remote
- 4253 UHF link
- 4300 Ground VHF-AM Base Station
- 4281 Crossband Link Kit (2 sets)
- 4370 Aircraft Link (2 sets)
- 4390 Starter System (7 sets)
- 4630 Satellite Iridium Remote Kit
- 4800 Portable IR Downlink Kit
- MAFFS Base Station (3 sets)

The NIRSC tries to keep a good supply of these masts on hand to support our kits. However, many do not get returned from incidents and we have to replace them. Shipping them individually is not recommended. It is highly recommended that they be returned with the kits they went out with.

Do not return masts that are bent, squashed, badly out of round or otherwise not readily reusable.

EQUIPMENT DESCRIPTIONS

4244 Logistics Radio Kit

This radio kit is designed to be used for incident support personnel, e.g., Plans, Logistics, Finance. This kit contains 16 UHF radios. The radios operate independently or in conjunction with UHF Repeater Kit NFES# 4248.

Kits contain radios which have all NIRSC frequencies, including all simplex and repeat pair frequencies.

NIRSC frequencies must be cleared for use by the NIICD-CDO. Frequency charts are in the kit.

The following frequency scheme indicates the channel on which the repeater frequencies will be found:

REPEATER	RADIO CHANNEL
L1 Logistics Repeater	Group 1 Ch 2
L2 Logistics Repeater	Group 1 Ch 4
L3 Logistics Repeater	Group 1 Ch 6
L4 Logistics Repeater	Group 1 Ch 8
L5 Logistics Repeater	Group 1 Ch 10
L6 Logistics Repeater	Group 1 Ch 12
L7 Logistics Repeater	Group 1 Ch 14

King Radios

The NIRSC has kits of 210 channel EPV radios. These radios have 15 groups of 14 channels. Groups are accessed by turning the radio on, then, when GRP appears on the display, press the number on the front pad for the group desired. If radio shows a channel number, press #, then press number on the front pad for group desired.

Refer to the kit frequency charts for additional information.

The EPV radios have a TA toggle switch on top. This is the talk-around switch. NIRSC recommends NOT USING this switch. When activated, the radio receives and transmits on the receive frequency.

These radios are password protected. The NIICD-CDO will give the authorization code to communications personnel upon request.

NOTE: All NIRSC UHF King Radio Kits will use the 9-cell battery clamshells. Do not use more than 9 cells!

EF Johnson Model 5133

These radios have 16 groups of 16 channels. Groups are accessed by turning the radio on and pressing the front toggle switch either up or down.

Refer to the kit frequency charts and diagrams for additional information.

4248 Logistics Repeater

The Logistics Repeater must be used in conjunction with a Logistics Radio Kit, NFES #4244, or the Remote Kit NFES # 4330 with appropriate UHF radio installed in the remote. Additionally the Logistics Repeater kit NFES #4248 is to be used to link two or more Command Repeater/Link NFES #4312s together. It is a battery operated portable repeater kit. (See drawings # 7 & 8, pages 34 & 35).

Uses include:

- ICP to Expanded Dispatch Center
- Helibase to ICP
- Ground Support Unit
- Outlying service functions to the Incident Communications Center (ICC)
- Staging area to ICP
- Helispots to ICP
- Non-fire related incidents can utilize these kits in command/tactical situations.

Resource Orders should indicate which frequency is needed, (L1, L2, etc.).

NIRSC frequencies must be cleared for use by the NIICD CDO.

Logistics repeaters have the following frequency designators:

REPEATER	RADIO CHANNEL
L1 Logistics Repeater	Group 1 Ch 2
L2 Logistics Repeater	Group 1 Ch 4
L3 Logistics Repeater	Group 1 Ch 6
L4 Logistics Repeater	Group 1 Ch 8
L5 Logistics Repeater	Group 1 Ch 10
L6 Logistics Repeater	Group 1 Ch 12
L7 Logistics Repeater	Group 1 Ch 14

4253 UHF Link

The UHF Link kit is used to link UHF-FM and VHF-FM together to extend area coverage for large incidents. Coordinate with the COMC or NIICD-CDO before ordering.

4281 Crossband Link Kit

The crossband link is designed to provide support for special operations on an incident that requires UHF frequency to VHF frequency conversion. This unit is in a Daniels rack with both a UHF transmitter and receiver and a VHF transmitter and receiver and can be programmed with special frequencies. Please contact the NIICD-CDO for ordering, designing and frequency coordination. This unit is not a repeater.

4300 Ground VHF-AM Base Station Kit

The Ground VHF-AM Base Station kit is a portable 760-channel VHF-AM base station. This kit cannot be linked or remoted. Kits are used primarily as a base station to contact aircraft on Forest Health Protection projects and on incidents. Base stations will transmit 7 watts, are capable of 10 pre-set channels, will scan, and operate using 115 Vac or 12 VDC through an automobile accessory plug-in. Four (4) handheld ICOM VHF-AM radios are included, as well as T-cards for radio check-out.

If this kit is to be used as an FAA portable control tower, the NFES 4300 order MUST be placed by the incident COML for the FAA controller.

4312 Command Repeater w/Link

Stand Alone Repeater Configuration:

The Command Repeater must be used in conjunction with a Command/Tactical Radio Kit, NFES #4381. The kit is a battery operated portable repeater designed for mountainous terrain and/or extended area coverage applicable to incident operational requirements. NIRSC Command repeater/Links will link to other VHF/UHF Repeaters using the UHF Link Modules included in the NFES 4312 kit. Repeaters should be ordered by NFES #. NIRSC frequencies must be cleared for use BEFORE shipment is made. Call the NIICD-CDO for clearance. The NIICD-CDO (208) 387-5644 will assign a frequency if not indicated on the Resource Order.

All Command Repeater/Links are single channel. If an additional repeat frequency is necessary, a separate Command Repeater/Link must be ordered. Orders will be filled based on priority need. Frequencies must be coordinated to reduce interference problems. All repeaters are capable of being tone-controlled (decode only). A tone-controlled repeater will operate as a normal repeater (carrier squelch) when not in the tone mode. Call the NIICD-CDO for more information on tone-control applications.

NIRSC Channel Plan: Radios are configured to match up with repeaters as follows:

Radio	Radio
ALL	ALL
Cmd Repeater C1 Group 1 Ch 6	Cmd Repeater C5 Group 2 Ch 6
Cmd Repeater C2 Group 1 Ch 8	Cmd Repeater C6 Group 2 Ch 8
Cmd Repeater C3 Group 1 Ch 10	Cmd Repeater C7 Group 2 Ch 10
Cmd Repeater C4 Group 1 Ch 12	

Note: If a special repeater is being sent to your incident the COML will need to program the radios with the frequencies.

Note: Verify that the UHF Modules are in the “OFF” position when used as a stand alone command repeater.

Repeater and Link Configuration:

The UHF Link is used to link UHF-FM and VHF-FM together to extend area coverage for large incidents.

Uses include:

It can be used to link two (2) or more VHF-FM Command Repeater/Links (NFES# 4312), using NIRSC frequencies.

It can be used to link one (1) or more VHF-FM Command Repeater/Links in configuration with a UHF Repeater to establish communications with the incident operations area back to an ICP located in difficult terrain.

The Command Repeater/Link (NFES# 4312) contains two (2) UHF modules (1-RX and 1-TX), that are permanently installed into the (NFES# 4312) Daniels repeater backplane along with two (2) RF cables that connect the modules to the antenna relay. A UHF whip antenna and a UHF Yagi antenna with 20 foot RF cables are included in the Command Repeater/Link NFES# 4312 shipping container to expedite all installation options.

4330 Remote Kit

The Remote kit can be used with VHF-FM (tactical) and UHF-FM (logistics) radios. Use of this kit, in conjunction with NIRSC radios, allows a remote base station to be installed up to a half mile away from the ICP, camp, helibase, etc. If more field wire is obtained, runs up to several

miles can be made.

The radio, chassis and battery are enclosed in a steel box which is removable from the shipping container. This allows for placement of the box at the base of the antenna while running only a wire pair to the desk set location. VHF and UHF King radios are included in the chassis box, eliminating the need for multiple interface cables.

Several antenna options are available including omni-directional UHF and VHF antennas and a breakdown UHF Yagi directional gain antenna.

4370 Ground Aircraft Radio/Link Kit

This Daniels kit is a portable, battery operated, all in one, VHF-AM aircraft base station and UHF-FM link. All aircraft kits operate as a base station or as a crossband link. There are two sets of antennas (VHF-AM and UHF-FM) for use in the link configuration. All kits include four (4) handheld ICOM VHF-AM radios.

The Ground Aircraft Radio/Link uses a 12 Volt DC power source. The unit can be operated from the supplied alkaline batteries (@ 15 Volts) or from an external 12 Volt DC power source (i.e. heavy duty car battery, DC power supply, or solar panels). If a 12 Volt DC power supply is used, it should have a minimum 5 amp continuous duty capability. Additional ICOM radios can be ordered to supplement a full kit. Call the NIICD-CDO for ordering assistance. Supplies are limited, therefore orders will be filled on a priority basis.

4381 Command Radio Kit

This VHF Radio kit is designed for use in command and tactical operations of an incident. Each kit contains sixteen (16) handheld radios. All radios are configured with all tactical, command and national air frequencies. The radios in each kit are the same manufacturer and model.

The issue document that you receive with these kits will reference a subkit, i.e. (4353) issued with the kit. This subkit is not a separate item and therefore not visible or trackable. It is used to capture costs of the accessories for the different radios that you receive. It is for NIRSC use only. Frequency charts are included in the kit, as well as T-cards for radio checkout.

Boxes are labeled on the outside to indicate the type of radios contained inside according to the following convention:

4381-K _ _ _ (K = King, R = Racal, J = EF Johnson, D = Datron Guardian 25, M= Motorola, KD=King DPHx)

NIRSC frequencies must be cleared for use BEFORE shipment is made. Call the NIICD-CDO for clearance.

The following lists the repeater frequency designation with the corresponding radio channel assignment.

Radio	Radio
ALL	ALL
Cmd Repeater C1 Group 1 Ch 6	Cmd Repeater C5 Group 2 Ch 6
Cmd Repeater C2 Group 1 Ch 8	Cmd Repeater C6 Group 2 Ch 8
Cmd Repeater C3 Group 1 Ch 10	Cmd Repeater C7 Group 2 Ch 10
Cmd Repeater C4 Group 1 Ch 12	

Command/Tac Radios:

Command/Tac radios are programmed by the NIRSC to be compatible with each system in which they are included. King EPH series radios are 210 channel and are capable of operating in either wide or narrowband mode. The Racal, Datron, and the EF Johnson are 256 channel radios capable of operating in either wide or narrowband mode as well as digital.

The King EPH radios have 15 groups of 14 channels. The King DPH Radios have 25 groups of 16 channels. The Racal, EF Johnson, and Datron Guardian 25 have 16 groups of 16 channels. All radios are password protected and cannot be field programmed without an authorization code. The NIICD-CDO will supply the authorization code only to communications personnel.

The NIRSC recommends that users limit the number of scanned channels to 3 and to use the HIGH POWER TX mode sparingly. These options will increase the load on the batteries which will rapidly reduce battery life.

NOTE: 1.) All clamshells included in radio kits must be re-

turned. 2.) The NIRSC King Radio Kits use 9-cell clamshells only!! Do not use more than 9 cells!

4390 Starter System - ICS Command/Logistics Radio System

The starter system is designed to be the initial system to support basic incident communications requirements. The system supplies equipment which will facilitate immediate communications for command, tactical, logistical and ground-to-air needs. The Starter System consists of:

- 1 Command Repeater/Link
- 3 CMD/TAC Radio Kits (total of 48 radios)
- 1 Ground Aircraft Radio/Link Kit (with 4 ICOM radios)
- 2 Remote Kits
- 1 Satellite Iridium Phone Kit (when available)
- 1 Logistics Repeater
- 1 Logistics Radio Kit (total of 16 radios)

A logistics capability is sent with all Starter Systems, i.e., logistics repeater, logistics radio kit. Use of NIRSC frequencies must be cleared by the NIICD-CDO prior to shipment. The NIICD-CDO will assign frequencies if not indicated on the Resource Order.

A NIRSC User's Guide (NFES# 0968) is included in each Command Repeater Kit.

In the case of a multi-branch or multi-incident complex, if several ICS Starter Systems are ordered, or if communications personnel are not familiar with NIRSC equipment, the NIICD-CDO must be contacted for ordering, system planning and frequency coordination assistance.

NIICD-CDO contact numbers:
CDO Phone:(208) 387-5644
Toll Free: 1- 877-775-3451

4410 Public Address Kit

The Public Address kit is primarily used at the ICP or in staging areas which house large numbers of personnel. It allows for the broadcasting of information or paging from a central point. The kits can be powered by either AC or batteries.

4499 Air Attack Kit

The Air Attack kit is built to supplement communications in contracted fixed-wing aircraft for missions ranging from reconnaissance to complex air attack. This kit can fit between the pilot and copilot seats in some aircraft (i.e. Cessna) and slightly behind the front seats in other aircraft. This kit creates an interface between the aircraft's existing audio system/radios and the Air Attack kit radios. All kits have the capability to operate two Technisonic Industries radios. Each kit will have either two TFM-138B or two TDFM-136 radios. There are no external markings on the shipping box as to which type radio is enclosed. Requests for a kit containing a specific model radio are not permitted.

The NFES 4499 Air Attack has a Dual Audio Control (COM/FM1/FM2/AUX1/AUX2/SC) for the pilot and co-pilot/ATGS, connectors for two AUX-FM type portable radio adapters, and two passenger headset adapters. Kit headset jacks are 600-ohm impedance using standard audio and mic type connectors. The pilot and copilot/ATGS utilize case mounted headset. Both passengers can operate all radios through the copilot/ATGS's transmitter selector. The "SC" position is simulcast transmission on both COM (aircraft VHF-AM) and FM1. Each kit includes two passenger headset adapters, two PT-300 PTT adapters, two BNC barrel connectors (for AUX-FM antenna connections), and instructions. Two (2) externally mounted VHF antennas are also required for operation.

For non-fire related incidents the VHF-VHF radios could be changed to give the kit a VHF-UHF capability. An external UHF antenna would be necessary on the aircraft. These requests will be done only on a case-by-case basis. Coordination with the NIICD-CDO is required.

This kit will **ONLY** be installed in aircraft meeting the National Air Tactical/ Reconnaissance Standards and passing an avionics inspection by a Forest Service/OAS avionics inspector.

The NFES 4499 Air Attack Aux-FM portable radio adapter connectors accept the same adapter connections used in all helicopters. Contact the

4630 Satellite Iridium Phone Kit

There are 35 Satellite Iridium Phone Kits ready for issue. These kits will be sent out with the 4390 Starter Systems as long as they are available.

4800 Portable IR Downlink Kit

The Portable IR Downlink kit is designated for use **only** by Infrared Interpreters (IRIN). It is used to transfer data from the infrared aircraft flying fire mapping missions to the IRIN on the ground, where delivery time is critical. All Kits (20 ea.) are designed with the novice user in mind. Easy to follow setup instructions are included so that the user need only to set up the antenna, connect a CAT 5 cable to the computer, and turn it on. All data will be transferred by the technician in the aircraft to the “My Documents” directory on the included PC in the ground station.

NIICD-CDO for availability of King & Racal AUX-FM adapter cables.

MAFFS Base Station

There are four (4) MAFFS Base Stations ready for issue. MAFFS stands for Modular Airborne Fire Fighting System and is used in conjunction with Military C-130 Airtanker use. MAFFS Base Stations will only be issued to tanker bases where MAFFS operations are being conducted. A spare base station is available for non-MAFFS use.

This portable kit is a combination 138 to 174 Mhz VHF-FM and 760 channel VHF-AM base station. The kit cannot be linked or remoted. Kits are used primarily for MAFFS Tanker Bases and other sites needing both VHF-FM and VHF-AM communications. The VHF-FM radio is a Technisonic TFM-138B airborne radio capable of transmitting 10 watts, 120 preset channels, simultaneous Air Guard (168.6250) reception, and scanning. The VHF-AM radio will transmit 7 watts, is capable of 10 pre-set channels, and will scan. The TAF-550 operates using 115 Vac or 24 VDC/12VDC through an automobile accessory plug-in (24 VDC and 12 VDC plug-ins are not included with either dedicated MAFFS Base Station). A headset for the TAF-550 is included for noisy environments in addition to a handheld mic.

MAFFS kits also include ten (10) King 210 channel VHF-FM handheld radios, 4 Hi/Low impedance headsets and adapters. The spare base station will not be issued with portable radios, headsets, or adapters.

SET-UP PROCEDURES NIRSC STAND ALONE REPEATERS NFES 4312 & 4248

1. Battery Supply. The battery is configured with a POLARIZED interconnect plug. If it becomes necessary to replace batteries, follow the battery hook-up illustration on page 62. Reversing polarity will result in an inoperative repeater. The repeater kit is shipped with the polarized plug disconnected and should be plugged in before the repeater is turned on.
2. Antenna Installation. Use the high gain antenna provided. Attach the ground planes.
3. Coaxial Cable. DO NOT leave the cable coiled. Run the coaxial cable through the hole provided in the side of the shipping container. Close the lid tightly to prevent weather and rodent damage to the equipment. Put tape over the hole in the box where the coax comes through to prevent rain from entering the box.

Note: Verify that the UHF Modules are in the “OFF” position when used as a stand alone command repeater.

COMMAND/LOGISTICS REPEATER NFES 4312 & NFES 4248 STAND-ALONE INSTALLATION INSTRUCTIONS

SET-UP PROCEDURES NIRSC REPEATER/LINK CONFIGURATION INSTALLATION INSTRUCTIONS

VHF REPEATERS ARE SENT OUT WITH UHF LINK RADIOS (Modules) INSTALLED.

NOTE: A CONFIGURATION DIAGRAM IS PROVIDED WITH EACH UNIT.

1. Erect the UHF Link Antenna (Yagi or Omni) according to the drawing. Attach the coaxial cable through the hole provided in the side of the fiberglass box to the Antenna Link port on the system monitor, using a 90 degree UHF connector (NFES# 4180) at the port.
2. The antenna coax should be fed out of the repeater box through the appropriate port. If done properly, the repeater and link coax's will exit on opposite sides of the repeater box. The repeater box access ports are marked to facilitate proper installation. **DO NOT FEED BOTH THE REPEATER AND LINK COAXS' OUT OF THE SAME ACCESS PORT!**
3. Ensure that the UHF TRANSMITTER AND RECEIVER Module switches are in the correct, "NORM", position.
4. Unless special frequencies are required, the UHF TX and RX frequencies are set by selecting the proper channel number using the TX B and RX B channel Select Switch on the AUDIO CONTROL Module. The Channel Select Switch is the bottom switch on the AUDIO CONTROL Module. The switch changes BOTH the transmit and receive frequencies at the same time. SEE THE CHANNEL/FREQUENCY CHART PROVIDED. "Straight UP" is Channel 1.
5. After installation is complete, test the repeater and link modules using the appropriate portable radios before leaving the site. **NOTE: BACK AWAY FROM THE REPEATER/LINK BOX A MINIMUM OF 25 FEET BEFORE TESTING.**

6. If a... number (208) 387-5644.

COMMAND REPEATER/LINK NFES 4312

LINK CONFIGURATION INSTALLATION INSTRUCTIONS

ADDITIONAL SETS OF 4 EA. NFES#1023 MAY BE INTRODUCED AT THIS LOCATION. ALTHOUGH, IT IS RECOMMENDED THAT AT THIS POINT A DEEP CYCLE RV/MARINE BATTERY AND CHARGER BE PURCHASED AND UTILIZED.

UHF LINK NFES 4253

A COMMAND REPEATER AUDIO CONTROL CARD

GROUND VHF-AM BASE STATION KIT NFES 4300

ANTENNA SETUP: Connect one end of antenna cable to the base station antenna. Erect base station antenna and mast using guy ropes and stakes. Connect the other end of antenna cable to TBS-150 Ground VHF-AM Base Station.

VOLTAGE SELECTION: The TBS-150 can operate on 115 Vac or external 13 VDC power. **NEVER CONNECT BOTH 115 Vac and 13 VDC at the same time.**

For 115 Vac operation: Connect AC power cord into TBS-150 and 115 Vac outlet. Turn TBS-150 AC On/Off switch to ON. Turn 91-DE Power On/Off switch to On.

For external power/cigarette lighter operation: Connect 3 pin/cigarette lighter DC power cable into TBS-150 and supplied batteries or cigarette lighter. Turn 91-DE Power On/Off switch to On. Note: The TBS-150 AC On/Off switch only operates when 115 VAC is used.

MICROPHONE CONNECTION: Connect handmic's 3 pin connector to 91-DE MIC connector. PTT operation is from the handmic. **DO NOT transmit without the antenna connected.**

91-DE RADIO USE: The 91-DE radio is a 760 channel VHF-AM transceiver capable of 10 preset channels plus scanning. Frequency selection is via the keypad. Set Volume knob to mid-range. Adjust squelch knob until squelch just quiets. See enclosed Operating Instructions book for more information.

OTHER INFORMATION: The TBS-150 has 4 fuses: the 91-DE's fuse is a standard 5 amp; the TBS-150's AC fuse is a 2.5 amp MDL; the TBS-150's DC fuse is a mini 5 amp; the DC power cord is an overrated 10 amp fuse and is basically unused with the TBS-150 relying on the mini 5 amp fuse for DC protection.

This kit is designed for base station use only and will not be operated in an aircraft.

GROUND VHF-AM BASE STATION KIT NFES 4300

REMOTE KIT NFES 4330

This Kit consists of one box plus the antenna poles.

1. Remove the remote desk set from the box along with 2 ea. 6 volt Hotshot batteries. If AC power is not available, connect the batteries to the remote desk set using the provided wire assembly (**Fused DC 5 Amp, 3-prong cable**). If AC power is available, use the provided AC-DC transformer to power the remote desk set. Connect the external speaker to the side audio jack for better audio quality.

CAUTION: Observe correct polarity when using batteries. See drawing for correct battery strapping (CPI remote desk set uses + 12 volts).

2. Remove the gray chassis box. Select a location common to the desired service areas that is within range of available communications wire supplied in the kit (**1/4 mile reels**).

3. Erect the appropriate antenna (UHF, VHF, UHF Yagi) and attach the coax cable from the antenna to the coax connector on the outside of the gray chassis box.

4. Connect the remote end of the communications wire pair to the remote chassis terminal lugs on the outside of the gray chassis box (**not polarity dependent**).

5. Open the grey box and determine if the correct radio is pre-mounted, if not connect the King adapter cable to the correct King radio's side connector (UHF or VHF), and strap it into place on top of the black DC termination panel. Connect the male BNC side of the King adapter cable to the female BNC side mount, and connect the male MIL Spec to the corresponding female side mount.

6. Connect power to the remote chassis by the provided 7.5 volt batteries or an external battery source. **Note: a fused DC 5 Amp, 2 prong cable is provided for external power.**
CAUTION: +10.5 to +15 volts is required for King radios.

7. After power up select the correct group and channel that will be used for the incident. Ensure the radio volume knob is set to the **pre-designated mark** on top of the radio, and adjust the squelch.

8. String the communications wire back to the site of the remote desk set. Attach the wires directly to the binding posts on the back of the CPI remote desk set (**not polarity dependent**)

9. Test and verify operation of the remote.

**REMOTE KIT
NFES 4330**

REMOTE KIT
NFES 4330
Deskset Battery Setup

+12 Volt Output between red and black leads

GROUND AIRCRAFT RADIO/LINK KIT NFES 4370

BASE STATION ONLY INSTALLATION

1. Erect the AV-1 aircraft antenna, according to the drawing. Attach the coaxial cable through the hole provided in the left side of the fiberglass kit box to the Antenna A, AM port on the system monitor, using a 90° UHF connector (NFES# 4180) at the port.
2. Connect the battery leads as shown in the drawing. There are several power supply options available (12-15 Volts) and the corresponding cables are included in the kit. To power up the unit, connect the cable from the power source to the cable coming from the unit's subrack (there is no on/off switch).
3. Place the two toggle switches on the audio control module in the down position. Place the VHF/AM transmitter module toggle switch and the VHF/AM receiver module toggle switch in the "NORM" position and make sure that both UHF/FM modules' toggle switches are in the "OFF" position.
4. Connect the microphone to the AM transmitter module. To use the low power internal speaker, switch the system monitor audio toggle switch to the "A" position, place the system monitor rotary function switch in position #2, and turn the rotary volume knob up to the desired level.
To use the external high power speaker, connect the speaker leads to the system monitor "METER" jacks, observing the correct polarity, switch the system monitor audio toggle switch to the "A" position, place the system monitor rotary function switch in position #1, and turn the system monitor rotary volume knob up to the desired level.
5. Set the desired AM frequency by turning rotary Switch A on the audio control module to the assigned channel . This switch controls both the transmitter and the receiver modules. Channels 1 through 6 are preprogrammed with AM simplex frequencies according to the AM frequency chart. **Channel 16** is user-programmable through the modules' front display faces.

To program an authorized frequency into **channel 16** of either the receiver or transmitter module: Turn rotary Switch A on the audio control module to **channel 16**. Then unlock the unit by hitting the "*" button and, before the "LOCKED" display goes blank, hit the "**down arrow button**" button. The display should now show

“UNLOCKED”. Wait for the display to blank, then hit the “**down arrow button**” button. When the display is showing the frequency, press and hold either the “**down arrow button**” or “**up arrow button**” button until the desired frequency is reached. The transmitter and receiver modules must be individually programmed. The unit is ready for base station operation.

GROUND AIRCRAFT RADIO/LINK KIT BASE STATION CONFIGURATION

4370 AM OMNI ANTENNA SETUP

15 VOLT BATTERY CONFIGURATION

GROUND AIRCRAFT RADIO/LINK KIT NFES 4370

AC RADIO/LINK INSTALLATION

1. Before setting up either antenna, keep in mind that maximum antenna separation is mandatory. Be sure that the antennas' coax cables will reach the sides of the AC radio/link kit box and allow for a drip loop.
2. Erect the AV-1 aircraft antenna as shown in the drawing, keeping in mind Step #1. Attach the coaxial cable through the hole provided in the left side of the fiberglass kit box to the Antenna A, AM port on the system monitor, using a 90° UHF connector (NFES #4180) at the port.
3. Erect the UHF omni-directional antenna as shown in the drawing, keeping in mind Step #1. Attach the coaxial cable through the hole provided in the right side of the kit box to the Antenna B, FM port on the system monitor, using a 90° UHF connector (NFES #4180) at the port.
4. Connect the battery leads as shown in the drawing. There are several power supply options available (12-15 Volts) and the corresponding cables are included in the kit. To power up the unit, connect the cable from the power source to the cable coming from the unit's subrack (there is no on/off switch).
5. Place the two toggle switches on the audio control module in the down position. Place both VHF/AM modules' toggle switches and both UHF/FM modules' toggle switches in the "NORM" position. Place the system monitor audio toggle switch in the center (off) position.
6. Set the desired AM frequency by turning rotary Switch A on the audio control module to the assigned channel. This switch controls both the transmitter and the receiver modules. Channels 1 through 6 are preprogrammed with AM simplex frequencies according to the AM frequency chart. **Channel 16** is user-programmable through the modules' front display faces.

To program an authorized frequency into **channel 16** of either the receiver or transmitter module: Turn rotary Switch A on the audio control module to **channel 16**. Then unlock the unit by hitting the "*" button and, before the "LOCKED" display goes blank, hit the

“**down arrow button**” button. The display should now show “UNLOCKED”. Wait for the display to blank, then hit the “**down arrow button**” button. When the display is showing the frequency, press and hold either the “**up arrow button**” or “**down arrow button**” button until the desired frequency is reached. The transmitter and receiver modules must be individually programmed.

7. Set the desired FM frequency by turning rotary Switch B on the audio control module to the assigned channel according to the UHF/FM frequency chart. This switch controls both the transmitter and the receiver modules. The unit is now ready for link operation. Before leaving the site, perform a radio test through both antennas using both an VHF/AM and an UHF/FM handheld radio. Step at least 40-50 feet away from the unit while performing the test.

AUDIO CONTROL CARD FOR GROUND A/C RADIO/LINK

AN AUDIO CONTROL CARD FOR THE 4370 AIRCRAFT LINK

GROUND A/C RADIO/LINK INSTALLATION

AIRCRAFT LINK (4370) ANTENNA SETUP IN LINK CONFIGURATION

PUBLIC ADDRESS KIT NFES 4410

The kit consists of one 20 Watt amplifier, 2 - 3 speakers designed for outdoor use, and tools and accessories necessary for installation.

1. Connect the amplifier to a power source.
 - A. For 115Vac operation use the power cord provided. An extension cord is provided for added convenience.
 - B. For 12 -15VDC operation, a similar cord is provided but with polarized clips rather than an AC plug. **CAUTION: Observe polarity when operating the amplifier on 12 - 15VDC!**
2. Connect the microphone to "MIC 1" or "MIC 2" on the front panel.
3. Connect the communication wire to the 70V and COM terminals on the rear panel.
4. String the communications wire to the remote speakers and connect the speakers as shown in the diagram. Use the wire nuts provided for these connections.
5. Before turning the amplifier ON, turn all volume controls to minimum. Place the ON-OFF switch to the ON position, rotate the master volume control about halfway. Adjust the correct MIC control until a satisfactory output is obtained. Any further adjustments should be made using the master control.

**PUBLIC ADDRESS KIT
NFES # 4410**

CAUTION: MAKE SURE THAT RED LEAD IS CONNECTED TO POSITIVE (+) BATTERY TERMINAL!

12V DC POWER

AC POWER

AIR ATTACK KIT INFORMATION

NFES 4499

October 26, 2004

The NFES 4499 Air Attack kit is a compact slip-in kit providing multiple VHF-FM radios for missions ranging from simple reconnaissance to complex Air Attack. The kit has two VHF-FM radios, two AUX-FM connections and supports up to four operators. The kit operates on either 14 VDC or 28 VDC. A storage compartment in the kit holds no equipment.

1. Kit Security: The NFES 4499 Air Attack kit must be secured for safe flight using the kit's two silver "D" handles and the supplied adjustable straps. Secure the kit to any ridged structure in the cockpit (using common sense and keeping safety in mind).

2. Voltage Selection: The NFES 4499 Air Attack kit has automatic voltage selection for 14 VDC or 28 VDC. Automatic voltage selection is dependent upon the aircraft's power connector supplying the correct voltage to the Air Attack kit.

3. Aircraft Power & Audio Connections: Aircraft must have an MS3112E12-3S (female) power connector in the aircraft (ground on pin B, and 14 volts on pin C or 28 volts on pin A). Only 14 or 28 VDC need be wired in the aircraft, **never wire both**. Attach power jumper cable from kit to MS3112E12-3S power connector in aircraft. Attach audio/mic jumper cable from kit to pilot's audio and mike jacks. Aircraft mike jack must have PTT capability.

4. Antenna Connections: Aircraft must have a minimum of two broadband VHF-FM aviation antennas installed (Comant type CI-177 or equal) using RG-58 A/U or better coax cable terminated with male BNC connectors. Connect the first two aircraft VHF-FM antenna cables to the kit's RADIO 1 ANT and RADIO 2 ANT connectors. A third or fourth aircraft VHF-FM antennas are for the AUX-1 and AUX-2 connections.

5. TFM-138B/TFDM-136 Radio Use: Operation and programming instructions are provided with the kit. Visit NIICD's website for up to date radio instructions at: <http://www.fs.fed.us/fire/niicd/documents.html>

FM 1 main/guard (upper radio) and FM 2 main (lower radio) may be reprogrammed to suit user needs. FM 2 guard preset is locked out and must never be re-programmed. FM 2 guard is dedicated to Air Guard operation (168.6250), the emergency frequency.

6. AUX-FM Connections: Two AUX-FM connectors are located at the rear of the kit. These connectors allow handheld radios to be operated through the kit's audio selector panels as AUX1 and AUX2. The user must supply a handheld radio and matching AUX-FM adapter cable. Use the supplied female BNC barrel connectors to mate the AUX-FM radio adapter to aircraft antenna cable for AUX-FM operation. Any type handheld radio using any frequency band may be used (dependent upon the installed aircraft antenna's frequency band capability).

7. Audio Selector Panel: The TAC-250 is a dual audio selector panel for the pilot (left) and ATGS (right). Two observer positions operate off the ATGS's audio selector panel. Attach observer headset adapter cord assemblies at the rear of the kit. Observer positions have the same radio receive, transmit, and VOX capability as selected by the ATGS's audio selector panel.

Transmitter Radio Selections:

1. COM is for the aircrafts' audio system via the kits' audio/mic jumper cable.
2. FM1 is for the upper VHF-FM radio (beside the TAC-250).
3. FM2 is for the lower VHF-FM radio.
4. AUX1 is for the AUX-FM 1 connector.
5. AUX2 is for the AUX-FM 2 connector.
6. SC is for simulcast transmissions using COM and FM1 radios. SC transmits on both radios simultaneously.

The pilot's audio selector panel has transmit priority over the ATGS's audio selector panel when they both have the same radio selected on their respective transmitter selector switches.

Keep in mind there are three transmitter selector switches: (1) TAC-250 transmitter selector knob; (2) TFM-138B/TDFM-136 radio MAIN & GUARD switch; and the (3) aircrafts' audio selector panel switch.

Receiver Audio Selections:

1. COM is for the aircrafts' audio system via the kits' audio/mic jumper cable.
2. FM1 is for the upper VHF-FM radio (beside the TAC-250).
3. FM2 is for the lower VHF-FM radio.
4. AUX1 is for the AUX-FM 1 connector.
5. AUX-FM 2 has no receiver selector (transmitter selector must be set on AUX2 to hear AUX2 audio).
6. SC "simulcast" uses COM and FM1 receive toggle switches.

Audio Level: A receiver is automatically selected when its' companion transmitter is selected on the audio selector panel. Receive (RX) volume level is the inner knob with VOX volume level being the outer knob.

VOX (Voice Activated Intercom): For no intercom, rotate the VOX knob fully CCW. Rotating VOX knob CW adjusts VOX activation level accordingly. VOX volume level is the outer knob with RX volume level being the inner knob.

NORMAL/EM/ISOL Switch: (1) NORMAL provides normal operation of VOX and amplified radio audio to all headset positions. (2) EM is emergency. The EM position operates in the same manner as the NORMAL position. (3) ISOL isolates the pilot's audio from the ATGS and both observers. The pilot will not be able to hear the ATGS or observers; however, the ATGS and observers will be able to hear the pilot and have normal intercom among themselves.

8. Other Information: Radio programming "D" connectors are located in the front of the kit. Both pilot and ATGS MIC jacks' have PTT capability using supplied PT-300 adapters. 28 VDC power input uses

7.5 amp circuit breaker and normally draws 3 amps transmitting. 14 VDC power input uses the 15 amp circuit breaker and normally draws 8 amps transmitting.

Keep in mind there are three (3) transmitter selector switches: TAC-250 transmitter selector knob; TDFM-136/TFM-138 radio MAIN & GUARD switch; and the aircraft's audio selector panel switch.

AIR ATTACK KIT NFES 4499

SATELLITE IRIDIUM PHONE KIT NFES 4630

Satellite Iridium Phone Setup Directions

11/15/2004

1. Remove outdoor antenna from box and attach to 1st mast section. Make certain that the antenna has a unobstructed view of the sky.
2. Attach 2ft. cable to antenna and the main cable to the 2ft. section.
3. Slide guy rope collar over 2nd mast section and attach to 1st mast section.
4. Attach 3rd mast section to 2nd mast section, pound in guy anchors and raise mast.
5. Attach N type barrel to main cable then attach 5ft. cable to barrel. Attach the other end of the 5ft. cable to the right side of the docking station.
6. Attach DC power adapter to top of docking station. If AC power is available use AC power adapter.
7. Configure batteries as shown in diagram and attach power cord. *(If you are using vehicle power plug the Iridiums' DC power adapter into the vehicles power receptacle. Attach magnetic antenna directly to the right side of the docking station and place the antenna on the roof of the vehicle.)*
8. Turn phone on using the red button on the lower left side of keyboard.
9. Enter pin 1111 when prompted. Refer to World Comm. Document located in brown envelope. The mini SIM card has already been installed.
10. To place a call press and hold the '0+' key until the '+' appears and then dial as you would a long distance call. To call the phone when it is located in the U.S. the caller must dial '011' and then the 12 digit phone number. If the phone is located outside the U.S. the correct 3 digit international access code must precede the 12 digit phone number.

Do not attempt to remove phone from docking station!
Do not separate antenna cables!

COIL THEM AND PLACE
THEM IN THE LID OF THE
LARGE FIBERGLASS BOX.

PORTABLE IR DOWNLINK KIT INFORMATION

NFES 4800

This portable IR downlink kit is designed for use only by Infrared Interpreters (IRIN)!! It is used to transfer data from the Infrared Aircrafts flying fire mapping missions to the IRIN on the ground in situations where delivery time is critical. All kits (20 ea) are designed with the novice user in mind. Easy to follow setup instructions are included so all the user need do is setup the antenna, connect a CAT5 cable to the computer, and turn it on. All data will be transferred by the technician in the aircraft to the “My Documents” directory on the included PC in the ground station.

This unit is designed to operate on 115Vac 60 Hz systems so the user will need to find a suitable power source. The data links utilize the 902-928 MHz public spectrum which has a 1 Watt power limitation, but since this is for **EMERGENCY USE ONLY** the National Interagency Incident Communications Division (NIICD) has been granted a license to use up to 5 Watts of power. Since this can cause severe interference in the public spectrum, this unit is to be utilized only when necessary and then turned off once transfer of data is complete. ****NOTE:** Do not shut this unit down until communications has been established to the aircraft and you have been notified that all data has been transferred.

The PC included in the kit is for use by the IRIN for the manipulation and viewing of the Infrared Imagery. Most applications needed by the IRIN are included, but in the event more applications are needed, administrative rights to install software/drivers have been installed. The procurement and installation of approved software is the IRIN’s responsibility. A CD-R/W drive has been included in the PC so user created data can be removed. Procurement of suitable media is the responsibility of the IRIN. When the units are returned to NIFC, the hard drives will be restored to their original condition. Any data on the units will be completely and irretrievably erased. Data storage and archival operations are to be performed by the IRIN.

Kits can be delivered by the Infrared Aircraft but **ONLY** after an appropriate Resource Order for an NFES # 4800 has been placed and approved by the incident. Once the Infrared Aircraft is no longer needed over the incident, the units must be **PROMPTLY** returned to NIFC for refurbishment. The PC included in the kit is **NOT** to be used for other purposes.

**MAFFS KIT
THIS KIT HAS NO NFES NUMBER IT IS ORDERED BY
NAME ONLY**
