

APPENDIX B: Processed Country Inventories (Revision: 3/28/2008)

The following inventories show all of the countries currently defined within the post-processing scripts used in SAGE. Flight results (fuel burn and emissions) are attributed to these countries based on the departure and arrival airport locations as discussed in Section 3.1. The modal categories are provided below:

Ground: Ground-based movements including taxi times and delays

<=3000: Airborne movements at or below 3000 ft above AFE

>3000: Movements above 3000 ft

Total: All movements

Based on these definitions, LTO and cruise results are derived as:

LTO = “Ground” + “<=3000”

Cruise = “>3000”

Table B-1. Selected Country Fuel Burn and Emissions Inventory for 2000

Selected Country	Mode	Distance (nm)	No. of Flights	Fuel Burn (Kg)	CO (Kg)	HC (Kg)	NOx (Kg)	CO ₂ (Kg)	H ₂ O (Kg)	SOx (Kg)
