Introduction

The U.S. Department of Housing and Urban Development's Office of Policy Development and Research contracted with ICF International to develop a revised codebook for the American Housing Survey (AHS) for 1997 and later. Since the original creation of this codebook, ICF International has made periodic updates to reflect new data releases and changes to the AHS.

Updated versions of this codebook will continue to be released as the AHS is further modified and as more effective ways of presenting current information are found. For such purposes, feedback on the codebook's use is both welcomed and appreciated.

Contact about this codebook

Comments or questions about this codebook should be sent to:

Kevin Blake
Project Manager
ICF International
9300 Lee Highway
Fairfax, VA 22031
kblake@icfi.com
Phone: 703-934-3407
Fax: 703-934-3740

Other information

Some background information on the AHS is included in Appendix A. More information can be found on HUD USER at: <http://www.huduser.org/datasets/ahs.html> or at the Census Bureau at: <http://www.census.gov/hhes/www/ahs.html>.

Acknowledgements

In developing this Codebook, ICF International has greatly benefited from the knowledge, information, and comments from people at both HUD and Census. In particular, ICF would like to thank:

- Ronald J. Sepanik, HUD
- David A. Vandenbroucke, HUD
- Thomas Blatt, Census
- Carolyn Lynch, Census
- Barbara Williams, Census

We are indebted to David Yao of HUD for his original data file structure diagram (under the section on Data Structure) and David Vandembroucke for making it available to us.

The primary ICF staff on this project were: Kevin S. Blake, Pooja Patel, Mariana Carrera, Gregory J. Watson, Joshua Leftin, and Rebecca Kellerson.

How To Use the Codebook

This codebook focuses on the AHS as it has been conducted since 1997. The codebook contains several resources to help users locate information on specific variables and learn more about each subject covered in the survey and the codebook. Variables are divided into 16 sections based on subject matter. The table of contents lists these sections and the page numbers on which they start. The variable listing in each section is preceded by a summary of what's available as well as helpful notes for users. An alphabetical listing of variables, section references, and data modules is located after the section on data structure. The Appendices include background information on the AHS, detailed definitions of terms used in the survey, and supplemental information on technical matters important to using the data. In addition, an index is located at the end of the codebook with page references for every variable and other important topics.

For information on the AHS before 1997, please refer to the other Codebooks cited under Additional Resources at the end of this Introduction section.

Each variable listing contains the following information. The FRENT variable is used as an example:

Variable Name	FRENT
Brief description of variable	Frequency of rent payment
Response codings. "B", "D", "R", ".", and blank, are different types of missing value codings.	1:52 1-52 times per year 53 53 times or more B Not applicable
This entry describes the question. This long description should be viewed as a reasonably accurate, although not exact rendering. The long description was created off of the basic questions filling in text as appropriate. However, this text may change based the exact questionnaire skip patterns and housing unit circumstances. To determine the exact questions asked, users must refer to the Questionnaire code on the HUD User website, and manually simulate the application of the instrument for the particular household.	<i>Long description:</i> How often is the rent payment for this unit due?
Identification of variable as Character or Numeric in the data set. In most cases, Census treats any variable with 2 or more digits as numeric.	<i>Type:</i> Numeric

Lists Edit Flag variable, if applicable. The Edit Flag variable reports if there was an edit or allocation made to the original variable, and what type of change was made for that observation.	<i>Edit flag variable:</i>	JFRENT
If variable is allocated, which matrix provides information. Appendix B provides descriptions of the process and the matrices used. Allocations occur to fill in missing values.	<i>Allocation Matrix:</i>	Matrix E
Whether or not variable is topcoded. "Topcoded" refers to whether or not the extreme outlier values were adjusted to preserve respondent confidentiality. The <i>Notes</i> section contains a description of how a variable is topcoded.	<i>Topcoded:</i>	No
Module in which variable is located. Module refers to the computer file where the raw data resides. In 2001, the information in househld, toppf, and weight files were combined into one new file called newhouse. The <i>Module 1999 and earlier</i> line is omitted if the variable is new in 2001. The <i>Module 2001 and later</i> line is omitted if the variable is no longer included in the data.	<i>Module 1999 and earlier:</i>	houshld
	<i>Module 2001 and later:</i>	newhouse
Unit of observation is what level the data is collected on. This is typically the household or individual level.	<i>Unit of observation:</i>	HOUSEHOLD
List of survey years and type when variable is present in the past three surveys.	<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N
Notes are included to clarify a definition, highlight important changes in wording or respondents across years and other facts that may affect the comparability or reliability of the question. Only included if applicable.	<i>Notes:</i>	

<p>This is an “English translation” of the Census blanking edits to indicate when values are “out of universe” or not present subject to certain conditions. The exact code restricting universes can be found in Appendix B.</p>	<p><i>Conditions not in universe:</i> 1 : [(URE interview or vacant interview) AND [(Held for occasional use throughout the year, or other not for rent, rented sold, for sale, or seasonal, or migratory)] ; OR 2 : [(URE interview or vacant interview) AND [For sale only or Sold, but not yet occupied] ; OR 3 : [(NOT occupied interview or URE interview or vacant interview)] ; OR 4 : [Occupied interview and Owned] AND [Respondent has homeowner's insurance] ; OR 5 : [Occupied interview and Owned] AND [Respondent does not have homeowner's insurance] ; OR 6 : [Occupied interview] AND [Occupied without payment]</p>
---	---

Some questions are asked in all surveys, some are not. This codebook shows when each question was asked in the national and metropolitan surveys since 1997. Even within a survey, be careful of homes where a question was not applicable, such as vacant, demolished, and newly built homes. The codebook shows codes for each of these situations. For example, code R in SATPOL (whether respondents are satisfied with police patrol in their neighborhoods) indicates the respondent refused to answer, while code B indicates not applicable, because the respondent was not asked the question, for example.

The codebook includes more detailed information on the following to help researchers use the data:

- *Weighting:* The introduction to Sample Status, Weights, Interview Status provides variables used for weighting and explains cases of zero weighted units.
- *Allocation:* To preserve the integrity of the survey data, the Census Bureau allocates, i.e. assigns, values to observations for certain missing variables. The codebook contains a chapter on allocation variables. In addition, Appendix B contains the matrices that Census uses to assign values when responses are missing.
- *Universes:* The codebook includes approximations based on Census’s blanking edits in the Q-Code as to when questions are not asked. These have been translated into more reader friendly terminology under variable descriptions and the complete codings are included in Appendix C.
- *Modules:* The alphabetical and by section variable lists also identify the module in which the data for a particular variable are located.

Users can also take advantage of several features of Adobe Reader or Acrobat to make using the codebook easier and faster. These suggestions are made based on Adobe Reader 5.0. If you are using an older version, the most recent version of the free Adobe Reader can be downloaded for free from <http://www.adobe.com>.

- *Searching:* Variables can be quickly located using the search function, which can be accessed by either clicking on the “binoculars” icon on the tool bar or pressing Control + F. To direct your search to a particular variable and its description if you know the variable name, include an equals sign after the variable. For example, to find the coding for the variable BANK, whether the first mortgage was borrowed from a bank, type BANK = (note there are two spaces after the variable name before =) into the find box.
- *Copying:* Information can be copied out of the codebook into another software package. This is useful for creating other documentation or to put variable definitions and codings into other programs. The text selection option can be used to copy text from this codebook into another document or software program. The location of the text selection tools varies with the version of Acrobat Reader. In version 5.0, there is a toolbar icon with the letter “T” and a dotted box next to it. Clicking on that will give you the text selection tool. Clicking on the drop-down arrow next to it will give the choice of that tool or the column selection tool. Column select allows you to specify a region of the screen to select, instead of having to select whole lines. These tools can also be accessed by pressing V and Shift + V, respectively.
- *Extracting pages:* Adobe Acrobat contains a function that allows users to extract pages from document. (Unfortunately, this feature is not available in Adobe Reader.) The extract pages function is located under the “document” menu on the toolbar.

Data Structure and File-Flattening

Data Structure

The “raw state” of the AHS data is a collection of files, each containing data in a different format or layout. Each record type corresponds to one or more module(s) in the data collection instrument or processing. This file format corresponds roughly to the actual data collection process. The files in 2001 are:

HOMIMP	Questions about upgrades and remodeling
JTW	Journey to work or commuting information
MORTG	Mortgage information
NEWHOUSE	Household-level information, data recodes, unit characteristics, and weighting information
OWNER	Questions just for owners of rental properties
PERSON	Individual person level information

RATIOV Verification of income to cost when the ratio of income to cost is outside of certain tolerances. (Note: This file is present beginning with the 1998 AHS metro sample. This file is not present in 1997.)

RMOV Recent mover information

The file NEWHOUSE was added in 2001, combining previous modules HOUSEHLD, TOPPUF, and WEIGHT. This change allows users to perform a greater number of household-level analyses without having to merge the component data files together. Prior to 2001, the information in NEWHOUSE is kept in three separate files. The modules are:

HOUSEHLD Household-level information (on internal Census Bureau data, this file is called "houshld")

TOPPUF General unit characteristics and data recodes

WEIGHT Weighting information

The files are available in both SAS and ASCII formats. The ASCII files are not a Census Bureau product. The ASCII versions have the same multi-file layout as the SAS versions, but differ in the coding of missing values. For a description of missing value codes in both file formats, please see the subtitle "Missing Values" at the beginning of Allocation Variables chapter.

The general structure of the collection of files in 1997 is different from the 1995 file structure and earlier versions. The 1997 files are more analogous to a relational database, so it is not possible to simply merge the files together to create the flat file. Each file is based on the unit of observation for that file. For example, the file about the housing unit structure has one observation for each housing unit. The file about the people who live in the housing unit has one observation for each person in the household; if there are multiple persons in the household, there will be multiple observations. As a result, the files have different numbers of observations depending on base unit of observation.

Unit of Observation

There are five basic categories for "Unit of Observation" which are described briefly in the following table.

Unit of Observation	Description
Household	This variable applies to everyone in the household <u>or</u> the characteristics of the housing unit.
Person	This variable applies to an individual in the household.
JTW/Person	This variable, on Journey to Work (Commuting), is at the person level.
MOVERS/Person	This variable refers to an item dealing with movement of the household in whole or in part, and also potentially household formation.
Home Improvement	This variable refers to upgrades/modifications made to the structure, usually part of the list of potential changes.

Single File Version

Some users of the AHS use the data in the format of the different modules, while others use a “single file” or “flat file” version similar to the format used in 1995 and earlier. These users have generally created the single file version by using a SAS program developed by ICF that is distributed with the data. Variables which are converted (have their names changed) in the creation of the single file version are noted in the codebook text.

For a more complete description of the single file format, please see the Documentation of Changes in the 1997 AHS document available on HUD User.

Conditions not in universe

Many users, as well as HUD, have requested that information on the universes applying to certain variables be included in the codebook. This is unfortunately a very difficult task because it requires tracking through the exact question flow and then all of the edits imposed by the Census Bureau later.

However, a reasonable approximation is to look at Census’s “blanking edits,” conditions where Census made certain that variables were not in the universe. This is intended to be a “plain English” version. The goal of is to have text that says: “Owners are excluded” as opposed to “[Tenure ne 1].” The “plain English” version is included with the variable description. The exact coding is present in an appendix.

This concept is still very much a work in progress.

Users are cautioned that the “true” out-of-universe conditions may be larger than the “conditions not in universe” derived from the blanking edits.

Allocation Matrices

In certain circumstances, the Census Bureau will “allocate” missing values based on other information. To do this, they use standard matrices of information.

An appendix describing each matrix and the allocation process is included.

Discussion of the File-Flattening Program

Users can use the raw information in its current state, develop their own programs to read the data in and convert it, or convert the data into a format that is similar to the older format. ICF Consulting has also developed a conversion program that combines the different data files into a flat-file format that is similar to that of the 1995 dataset. The final format is a SAS dataset with a similar structure to the original flat file with each observation equal to one housing unit. That program can be found on the HUD USER Web site (www.huduser.org) under the links for AHS data. The program is also included in the distribution of the data in SAS format from the HUD

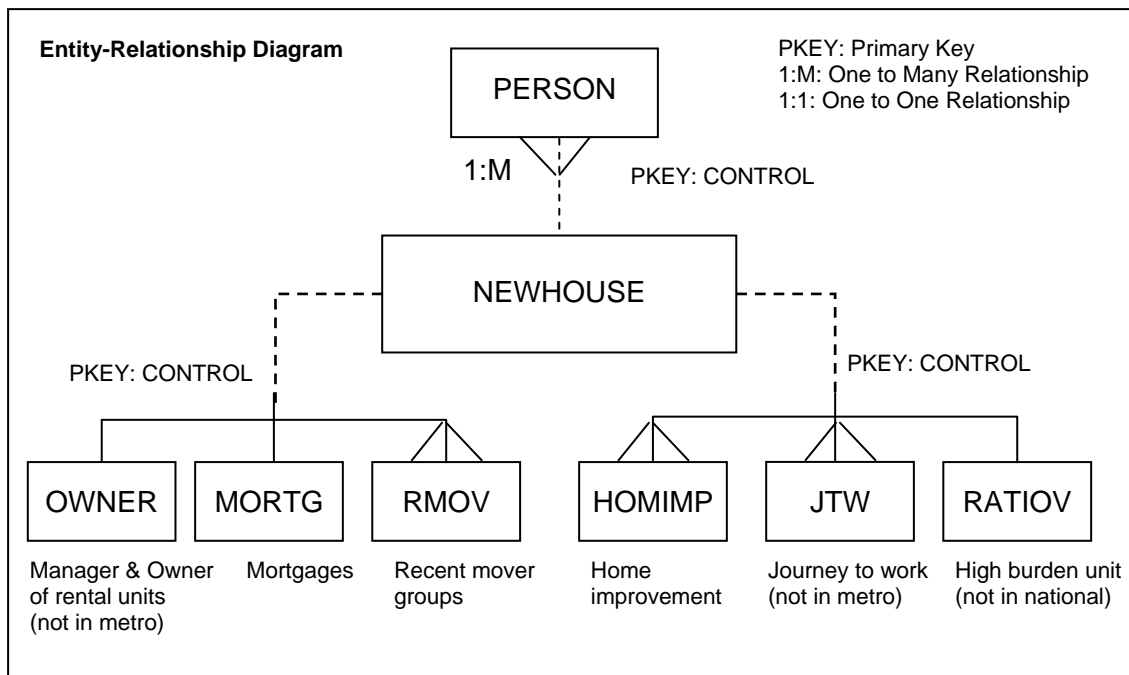

USER Web site. Currently, the conversion program is written in SAS and works only in SAS. AHS users who are not using SAS will need to convert the programs to the system they are using or use a program developed by another AHS user. The AHS electronic mailing list exists, in part, to facilitate such exchanges. The Census Bureau and HUD do not officially support the flat file format.

Notes on Merging Individual Files

This section describes the data structure for the AHS when using the data in its “native” distribution format – not converted to a flat file. There are also some brief examples of how certain data can be merged together for common tasks. These examples only provide a short summary of the logic behind merging the files together and not the exact code. Additional examples are included in Appendix H.

Basic Diagram

The following diagram provides the basic overview of how the different component files of the AHS merge together. This is based on the 1999 and later distributions of the AHS.

As can be seen from the diagram, the “NEWHOUSE” file serves as the core file which other data are then merged onto. Users should note that multiple variables are needed to merge on certain data, and it is not always the same data. Users should also note that some of the other files are only present in the National or the Metro distributions.

The most important variable for merging is the CONTROL variable, which is present in all of the files. This variable is the control code for the housing unit. CONTROL is a 12-digit variable

unique to each housing unit in the national survey data. In the metropolitan survey data, CONTROL is only unique to a housing unit inside of an SMSA. Therefore, files from the metropolitan surveys must be merged by using SMSA CONTROL in order to correctly match housing units' characteristics across files.

Each file has its own level of observation. The following table shows the file, level of observation, and the variables needed to merge on, and to what file it should be merged. The word "(multiple)" next to the merging variable indicates that there are multiple observations with the same values for the merging variable inside of a single household.

File Matching Key

File	Unit of observation	Merging variables ¹	To what:
HOMIMP	Home improvements, upgrades, and alternations	CONTROL (multiple)	NEWHOUSE
HOUSEHLD	Household	CONTROL	TOPPUF
JTW	Individual commuting patterns	CONTROL (multiple) PLINE	PERSON
MORTG	Mortgages	CONTROL (multiple)	NEWHOUSE
NEWHOUSE	Household	CONTROL	all other files
OWNER	Owners of rental properties	CONTROL	NEWHOUSE
PERSON	Persons comprising household	1. CONTROL (multiple) 2. CONTROL (multiple) MOVGRP (multiple) 3. CONTROL (multiple) PLINE	1. NEWHOUSE 2. RMOV 3. JTW
RATIOV	Special cases, household level	CONTROL	NEWHOUSE
RMOV	Groups of persons inside of a household who are recent movers	CONTROL (multiple) MOVGRP (multiple)	PERSON
TOPPUF	Housing unit	CONTROL	all other files
WEIGHT	Household	CONTROL	TOPPUF

¹CONTROL codes for housing units for the AHS Metro Survey data are only unique within each SMSA. Therefore the SMSA variable must also be used when merging these data files. When using metropolitan data, substitute "SMSA CONTROL" for every occurrence of "CONTROL".

The column that lists into which file the data may be merged should be used as guidance only. There are other valid possibilities. For example, TOPPUF and HOUSEHLD can be thought of interchangeably for merging purposes.

When combining the data, extreme care must be taken. The basic level of observation is generally the housing unit, and improper merging or improper use of weights will lead to inaccurate results.

Merging Variables: In order to keep all of the responses for a particular housing unit together, users must merge or join files using the variables described in the table on the following page. Failure to use the correct merging variables will lead to incorrect merging and combining of data from different households or housing units together.

Weights: Weights are assigned only at the household level; there are no person-level weights present in the AHS. The standard weight variable, WEIGHT, is calculated based on 1980 geography as were all AHS weights from 1985 onwards. So that tabulations using the 2001 microdata can be matched to the published tables, the Census Bureau and HUD added a variable, WGT90GEO, to the 2001 AHS microdata. This new weight is calculated based on 1990 metropolitan geography. Both weights sum to national control totals for total number of units for 2001.

Householder: The householder is not necessarily the first member listed for the household or even the person with the lowest PLINE value. The householder is determined through the REL variable. REL values of 1 or 2 identify the householder.

Number of Observations per Housing Unit for a Module: Only the NEWHOUSE in 2001 and later, and HOUSEHLD, TOPPUF, and WEIGHT before 2001, module have exactly one observation for every housing unit in the AHS. Other modules may have none, one, or more than one observation for each housing unit. Certain modules have fewer total observations, such as the HOMIMP module because of the relatively few cases doing home improvements. Some have more, such as the PERSON module because often more than one person lives in a household.

Merging or Joining: When combining data from the different modules, users must be careful to retain the data in a valid format. An overriding goal during the creation of the file-flattening program was to allow all the data to be analyzed at a housing unit level while still allowing the flexibility to examine the data at a greater level of detail, such as the person level.

Validating Combining of Files: Users are strongly encouraged to check their merging or joining of data by comparing their results against summary statistics generated with the public use file (PUF), which is available from the HUD USER Web site. Those summary statistics will match exactly. Users may also wish to compare against results published in the printed AHS report, but there is a chance that those will not match exactly due to the Census Bureau's use of internal data.

Merging and Missing Values: When combining data, users should be certain that they understand how the statistical package they are using treats situations where a one-to-one correspondence in observations for the two data sets does not exist. The basic issue is how the program carries values from one observation to the next. Different statistical packages handle this in different ways depending on the options used. Some statistical packages will carry the value through while others will create a missing value based on the merge. For example, if the NEWHOUSE module has one observation and the PERSON module has more than one matching observation, does the merging technique apply the values from the NEWHOUSE set to every matching observation in the PERSON set, or just to the first matching person?

Additional AHS resources

The U.S. Department of Census American Housing Survey website (<http://www.census.gov/hhes/www/ahs.html>) contains more AHS-related resources. These include the Field Representatives Manual, weighting specifications, recode specifications, edit specifications, and historical changes.

The AHS website on HUDUSER (<http://www.huduser.org>) contains the computer code for the 1997 survey instrument, user supplied programs, metropolitan data, and other data resources.

The HUD USER Web site also has a page to distribute user-contributed programs developed using the AHS. These user-contributed programs can be found at <http://www.huduser.org/datasets/ahs/ahsprev.html>. No warranties about the suitability of these programs are provided by HUD. If you wish to contribute to this library of programs, please send them to: Dav Vandenbroucke at David.A.Vandenbroucke@hud.gov

Variables Listed Alphabetically

ACCESS	Direct access to unit	Unit
ACCESSB	Entry system required to access building	Unit
ACCESSC	Entry system required to access community	Neighborhood
ADDTN2	Percentage of 2nd mortgage used for additions/improvements	Housing Cost
ADDTNS	Percentage of 1st mortgage used for additions/improvements	Housing Cost
AFUEL	Type of fuel used for air conditioning	Utilities
AFUR	Forced air furnace as supplemental heating equipment	Utilities
AGE	Age of person	Household Composition
AGERES	Age restricted development	Unit
AIR	Room air conditioner	Unit
AIRSYS	Central air conditioner	Unit
ALMV	All movers lived in same previous residence	Recent Movers
AMMORT	Amount of 1st mortgage when acquired	Housing Cost
AMMRT2	Amount of 2nd mortgage when acquired	Housing Cost
AMMRT3	Amount borrowed by 3rd mortgage	Housing Cost
AMMRT4	Amount borrowed by 4th & other mortgages	Housing Cost
AMPM	Time usually leave for work - am or pm	Commuting
AMRTZ	Years needed to pay off 1st mortgage	Housing Cost
AMRTZ2	Years needed to pay off 2nd mortgage	Housing Cost
AMTE	Average monthly cost of electricity	Utilities
AMTF	Annual cost of other fuels	Utilities
AMTG	Average monthly cost of gas	Utilities
AMTI	Annual cost of homeowners insurance	Housing Cost
AMTM	Amount of other charges included in 1st mortgage	Housing Cost
AMTM2	Amount of other charges included in 2nd mortgage	Housing Cost
AMTO	Annual cost of fuel oil	Utilities
AMTT	Annual cost of garbage & trash	Housing Cost
AMTW	Annual cost of water & sewage	Housing Cost
AMTX	Annual real estate tax payment	Housing Cost
ANCHOR	Method used to anchor mobile home	Mobile Homes
ANYCAR	Wall-to-wall carpeting in any area of unit	Unit
ANYPNT	Any painting done on inside of unit	Unit
ANYRUG	Any rugs or carpeting in unit	Unit
APPLY	How got to live in public housing	Household Composition
APTAD	Space added to apartment	Upgrade and Remodeling
APTCH	Type of change to apartment	Upgrade and Remodeling

APTCM	Apartment combined with other apartment	Upgrade and Remodeling
APTFL	Number of floors in the apartment itself	Unit
APTSP	Apartment split into several apartments	Upgrade and Remodeling
ARM	1st mortgage changes due to interest rate	Housing Cost
ARM2	2nd mortgage changes due to interest rate	Housing Cost
ARMASK	1st mortgage changes for other reason	Housing Cost
ARMASK2	2nd mortgage changes for other reason	Housing Cost
ASSTSERV	Manager provides personal care assistance	Unit
ATBSUN	Number of unfinished attics/basements in unit	Unit
BADPER	People in neighborhood are bothersome	Neighborhood
BADPRP	Undesirable neighborhood/property bothersome	Neighborhood
BADSRV	Poor city/county services are bothersome	Neighborhood
BADSTEP	Loose/broken/missing steps in common stairs	Unit Quality
BANK	1st mortgage borrowed from bank	Housing Cost
BANK2	2nd mortgage borrowed from bank	Housing Cost
BATHS	Number of full bathrooms in unit	Unit
BBLDG	Type B noninterview building	Sample status, weights, interview status
BDCARP	Wall-to-wall carpeting in bedroom	Unit
BDSTPQ	Loose/broken/missing steps in common stairs	Unit Quality
BEAF78	Unit built before/after 1978	Lead Based Paint
BEDRMS	Number of bedrooms in unit	Unit
BEDX	Number of bedrooms with wall-to-wall carpeting	Unit
BIGP	Area of peeling paint larger than 8 x 11	Lead Based Paint
BIGPEL	Peeling paint outside larger than door	Lead Based Paint
BILLF	Type of billing for other fuels	Utilities
BILLFE	Other fuels billed with electricity	Utilities
BILLFG	Other fuels billed with gas	Utilities
BILLFO	Other fuels billed with fuel oil	Utilities
BILLFT	Other fuels billed with garbage/trash	Utilities
BILLFW	Other fuels billed with water/sewage	Utilities
BILLG	Type of billing for gas	Utilities
BILLGE	Gas billed with electricity	Utilities
BILLGF	Gas billed with fuel oil	Utilities
BILLGO	Gas billed with other fuels	Utilities
BILLGT	Gas billed with garbage/trash	Utilities
BILLGW	Gas billed with water/sewage	Utilities
BILLO	Type of billing for fuel oil	Utilities
BILLOE	Fuel oil billed with electricity	Utilities
BILLOF	Fuel oil billed with other fuels	Utilities
BILLOG	Fuel oil billed with gas	Utilities

BILLOT	Fuel oil billed with garbage/trash	Utilities
BILLOW	Fuel oil billed with water/sewage	Utilities
BILLT	Type of billing for garbage & trash	Utilities
BILLTE	Garbage/trash billed with electricity	Utilities
BILLTF	Garbage/trash billed with other fuels	Utilities
BILLTG	Garbage/trash billed with gas	Utilities
BILLTO	Garbage/trash billed with fuel oil	Utilities
BILLTW	Garbage/trash billed with water/sewage	Utilities
BILLW	Type of billing for water & sewage	Utilities
BILLWE	Water/sewage billed with electricity	Utilities
BILLWF	Water/sewage billed with other fuels	Utilities
BILLWG	Water/sewage billed with gas	Utilities
BILLWO	Water/sewage billed with fuel oil	Utilities
BILLWT	Water/sewage billed with garbage/trash	Utilities
BDMNT	Satisfaction with building maintenance	Unit Quality
BLEAK	Water leak in basement	Unit Quality
BLOON	1st mortgage's last payment biggest	Housing Cost
BLOON2	2nd mortgage's last payment biggest	Housing Cost
BOARDU	Type B unit boarded up	Sample status, weights, interview status
BSINK	Unit has a bathroom sink	Unit Quality
BUILT	Year unit was built	Unit
BURNER	Unit has working built-in cooking burners	Unit
BUSIN	Number of offices/business rooms in unit	Unit
BUSPER	# rooms used for business/personal use	Unit
BUYE	Pay for electricity separately	Utilities
BUYE2	Pay for electricity separately	Utilities
BUYF	Pay for other fuels separately	Utilities
BUYF2	Pay for other fuels separately	Utilities
BUYG	Pay for gas separately	Utilities
BUYG2	Pay for gas separately	Utilities
BUYI	Household has homeowners insurance	Housing Cost
BUYO	Pay for fuel oil separately	Utilities
BUYO2	Pay for fuel oil separately	Utilities
BUYT	Pay for garbage/trash separately	Housing Cost
BUYT2	Pay for garbage/trash separately	Housing Cost
BUYW	Pay for water/sewage separately	Housing Cost
BUYW2	Pay for water/sewage separately	Housing Cost
CABNX	Number of cabinets replaced/repared	Upgrade and Remodeling
CABREP	Replaced/repared any cabinets in unit	Upgrade and Remodeling
CAMF	Frequency of assoc/mobile home park fee	Mobile Homes

CAMFQ	Frequency of assoc/mobile home park fee	Mobile Homes
CANVAR	Term of 1st mortgage can vary	Housing Cost
CANVR2	Term of 2nd mortgage can vary	Housing Cost
CARS	Number of cars kept for use by household members	Commuting
CASH	Amount of cash received from 1st mortgage	Housing Cost
CASH2	Amount of cash received from 2nd mortgage	Housing Cost
CELLAR	Unit has a basement	Unit
CFUEL	Fuel used most for cooking	Utilities
CITSHP	U.S. Citizenship	Household Composition
CLIMB	Number of floors from main entrance to apartment	Unit
CMSA	1980 design CMSA code	Geography
COKST	Cook stove used as supplemental heating equipment	Utilities
COMMRECR	Community recreational facilities available	Neighborhood
COMMSERV	Community services provided	Neighborhood
CONDO	Unit is condominium or cooperative	Unit
CONFEE	Monthly condo/homeowner's association/mobile home fee	Housing Cost
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
COOK	Unit has working cookstove or range/oven	Unit
COUNTY	County code	Geography
CPRICE	Cost of construction plus value of land	Housing Cost
CRACKS	Open cracks wider than dime	Unit Quality
CRIMEA	Neighborhood has neighborhood crime	Neighborhood
CRIMEB	Neighborhood crime bothersome	Neighborhood
CRIMEC	Crime so bad you want to move	Neighborhood
CROPSL	Receive farm income	Income
CSTMNT	Annual cost for routine maintenance	Housing Cost
CUSHOM	How owner obtained unit	Household Composition
DAFUR	Forced air furnace - DK if supplemental/parallel	Utilities
DATE	Interview date	Sample status, weights, interview status
DCOKST	Cookstove - DK if supplemental/parallel heat equipment	Utilities
DEGREE	Average heating/cooling degree days	Utilities

DELECT	Built-in electric unit-DK if supplemental/parallel	Utilities
DENS	Number of dens/libraries/tv rooms in unit	Unit
DFIRE	Type C-30/31 severely damaged by fire	Unit Quality
DFLOT	Vented room heater - DK if supplemental/parallel	Utilities
DFRPL	Fireplace w/out inserts-DK supplemental/parallel	Utilities
DFRPLI	Fireplace w/ inserts-DK if supplemental/parallel	Utilities
DFUEL	Fuel used by clothes dryer	Utilities
DHOTH	Other type of heat equipment-DK if supplemental/parallel	Utilities
DHPMP	Heat pump - DK is supplemental/parallel heat equipment	Utilities
DINING	Number of dining rooms in unit	Unit
DIRAC	Number of offices having direct access	Unit
DISAS	Type C severely damaged by natural disaster	Unit Quality
DISH	Unit has working dishwasher	Unit
DISPL	Unit has working garbage disposal	Unit
DISTJ	Number of miles traveled to work	Commuting
DLINE1	Line Number of respondent	Household Composition
DOORX	Number of doors replaced/repared	Upgrade and Remodeling
DORREP	Any doors repaired/replaced in unit	Unit Quality
DPLF	Pipeless furnace - DK if supplemental/parallel	Utilities
DRSHOP	Medical office/community store on property	Unit
DRY	Unit has working clothes dryer	Unit
DSTEAM	Steam/hot water system-DK if supplemental/parallel	Unit
DSTOVE	Woodburning stove - DK if supplemental/parallel	Unit
DWNPAY	Main source of downpayment on unit	Housing Cost
EABAN	Abandoned/vandalized buildings within 1/2 blk	Neighborhood
EAGE	Unit about same age as nearby units	Neighborhood
EAPTBL	Apartment buildings within 1/2 block of unit	Neighborhood
EBAR	Windows covered with metal bars	Unit
EBARCL	Buildings w/ bars on windows within 1/2 blk	Neighborhood
EBOARD	Windows boarded up	Unit Quality
EBROKE	Windows broken	Unit Quality
ECOM1	Business/institutions within 1/2 block	Neighborhood
ECOM2	Factories/other industry within 1/2 block	Neighborhood
ECRUMB	Holes/cracks or crumbling in foundation	Unit Quality
EGOOD	No listed conditions seen in/on unit	Unit Quality
EGREEN	Open spaces within 1/2 block of unit	Neighborhood
EHEIGHT	Height of apartment buildings within 1/2 blk	Unit
EHIGH	Apartment buildings 7+ stories tall within 1/2 blk	Neighborhood
EHOLER	Roof has holes	Unit Quality
EJUNK	Trash/junk in streets/properties in 1/2 blk	Neighborhood

ELECT	Electrical units used as supplemental heat equipment	Utilities
ELEV	Working passenger elevator	Unit
ELEVWK	At least one elevator in working order	Unit Quality
ELOW1	Single-family town/rowhouses in 1/2 blk	Neighborhood
ELOW2	Apartment buildings <4 stories tall within 1/2 blk	Neighborhood
EMID	Apartment buildings 4-6 stories within 1/2 block	Neighborhood
EMISSR	Roof missing shingles/other roofing materials	Unit Quality
EMISSW	Outside walls missing siding/bricks/etc	Unit Quality
EMOBIL	Mobile homes within 1/2 block of unit	Neighborhood
EPRKG	Parking lots within 1/2 block of unit	Neighborhood
EPRKGA	Nearby parking lots useable by anyone	Neighborhood
EPRKGR	Nearby parking lots for residents only	Neighborhood
EPRKGS	Nearby parking lots for shoppers/workers	Neighborhood
EROAD	Roads within 1/2 block need repairs	Neighborhood
ESAGR	Roof's surface sags or is uneven	Unit Quality
ESFD	Single family homes within 1/2 block	Neighborhood
ESLOPW	Outside walls slope/lean/slant/buckle	Unit Quality
ETRANS	Railroad/airport/4-lane hwy within 1/2 block	Neighborhood
EVROD	Evidence of rodents in unit	Unit Quality
EVRTES	Unit ever tested for lead paint	Lead Based Paint
EWATER	Bodies of water within 1/2 block of unit	Neighborhood
EXCLUS	Number offices used exclusively for business	Unit
EXPOSE	Type B interior exposed to elements	Unit Quality
EXTLN2	2nd mortgage refinanced to renew/extend	Housing Cost
EXTLON	1st mortgage refinanced to renew/extend	Housing Cost
FAFUR	Fuel used by forced warm-air furnace	Utilities
FAMNUM	Family number	Household Composition
FAMREL	Family relationship	Household Composition
FAMRM	Number of family rooms/great rooms in unit	Unit
FAMTYP	Family type	Household Composition
FCOKST	Fuel used by cookstove	Utilities
FELECT	Fuel used by built-in electric units	Utilities
FFLIN	Fuel used by unvented room heaters	Utilities
FFLOT	Fuel used by vented room heaters	Utilities
FFRPL	Fuel used by fireplace without inserts	Utilities
FFRPLI	Fuel used by fireplace with inserts	Utilities
FHOTH	Fuel used by other supplemental heating equipment	Utilities
FHPMP	Fuel used by electric heat pump	Utilities
FIXED	1st mortgage changes for taxes/insurance	Housing Cost
FIXED2	2nd mortgage changes for taxes/insurance	Housing Cost

FLIN	Heating equipment not vented to outside	Utilities
FLOODPLN	Unit in a flood plain	Unit
FLOORS	Number of stories in building	Unit
FLOT	Heating equipment vented to outside	Unit
FLRENT	Frequency of land/site rent payment	Housing Cost
FMHOTF	Frequency of other mobile home fee payments	Housing Cost
FMR	Fair market rent (average)	Income Limits FY2003
FMRA	Fair market rent (minimum)	Income Limits FY2003
FMRB	Fair market rent (maximum)	Income Limits FY2003
FOOD	Meals included in rent paid to household	Income
FPINS	Fireplace has inserts	Unit
FPLF	Fuel used by built-in pipeless furnace	Utilities
FPLWK	Unit has useable fireplace	Unit
FPORTH	Fuel used by portable electric heaters	Utilities
FREEZE	Unit cold for 24+ hrs was uncomfortable	Unit Quality
FRENT	Frequency of rent payment	Housing Cost
FRPL	Fireplace does not have inserts	Unit
FRPLI	Fireplace has inserts	Unit
FRSIT	First site mobile home ever placed on	Mobile Homes
FRSTHO	Ever owned home before	Household Composition
FRSTOC	Current occupants are first occupants	Unit
FSTEAM	Fuel used by steam/hot water system	Utilities
FSTOVE	Fuel used by woodburning/franklin stove	Utilities
GARAGE	Garage or carport included with unit	Unit
GASPI2	Source of gas heat for vacant units	Utilities
GASPIP	Gas from underground pipes or bottles	Utilities
GATED	Walls/fences surrounding community	Neighborhood
GPM	1st mortgage payments rise on fixed schedule part	Housing Cost
GPM2	2nd mortgage payments rise on fixed schedule part	Housing Cost
GPMW	1st mortgage payments rise on fixed schedule whole	Housing Cost
GPMW2	2nd mortgage payments rise on fixed schedule whole	Housing Cost
GRAD	Educational level of person	Household Composition
GRDMNT	Satisfaction with grounds maintenance	Unit Quality
GTCAS2	2nd mortgage refinanced to receive cash	Housing Cost
GTCASH	1st mortgage refinanced to receive cash	Housing Cost
HALB	Additional half bathrooms in unit	Unit
HALFB	Number of half bathrooms in unit	Unit
HEARHS	How first heard about this unit	Housing Cost
HEBAL1	Outstanding loan against 1st home equity loan	Housing Cost
HEBAL2	Outstanding loan against 2nd home equity loan	Housing Cost

HEBAL3	Outstanding loan against 3rd home equity loan	Housing Cost
HEBAM1	Outstanding balance on 1st home equity loan	Housing Cost
HEBAM2	Outstanding balance on 2nd home equity loan	Housing Cost
HEBAM3	Outstanding balance on 3rd home equity loan	Housing Cost
HECR1	Credit limit on 1st home equity loan	Housing Cost
HECR2	Credit limit on 2nd home equity loan	Housing Cost
HECR3	Credit limit on 3rd home equity loan	Housing Cost
HEINF1	Interest rate on 1st home equity loan - fraction	Housing Cost
HEINF2	Interest rate on 2nd home equity loan - fraction	Housing Cost
HEINF3	Interest rate on 3rd home equity loan - fraction	Housing Cost
HEINW1	Interest rate on 1st home equity loan - whole #	Housing Cost
HEINW2	Interest rate on 2nd home equity loan - whole #	Housing Cost
HEINW3	Interest rate on 3rd home equity loan - whole #	Housing Cost
HEL	Has a home equity loan	Housing Cost
HELC	Has a home equity line of credit	Housing Cost
HELCN	Number of home equity lines of credit	Housing Cost
HELMP1	1st home equity loan lump sum	Housing Cost
HELMP2	2nd home equity loan lump sum	Housing Cost
HELMP3	3rd home equity loan lump sum	Housing Cost
HELUMN	Number of lump sum home equity loans	Housing Cost
HELUMP	Has a lump sum home equity loan	Housing Cost
HENUM	Number of home equity loans	Housing Cost
HEPMT1	1st home equity loan monthly payment	Housing Cost
HEPMT2	2nd home equity loan monthly payment	Housing Cost
HEPMT3	3rd home equity loan monthly payment	Housing Cost
HEQUIP	Main heating equipment	Utilities
HERE	Nonrelative is present	Household Composition
HETYP1	1st home equity loan type	Housing Cost
HETYP2	2nd home equity loan type	Housing Cost
HETYP3	3rd home equity loan type	Housing Cost
HFUEL	Fuel used most for heating unit	Utilities
HHAGE	Age of householder	Household Composition
HHCITSHR	US Citizenship of householder	Household Composition
HHFOOD	Lodger contributes to household for food	Income
HHGRAD	Education level of householder	Household Composition
HHINUSYR	Year householder came to US	Household Composition
HHMAR	Marital status of householder	Household Composition
HHMORT	Lodger contributes to household for mortgage/rent	Income
HHMOVE	Year householder moved in	Recent Movers
HHMOVN	Month householder moved in	Recent Movers

HHMVG	Recent mover group of householder	Recent Movers
HHNATVTY	Country of birth of householder	Household Composition
HHOTH	Lodger contributes to household for other costs	Income
HHPLINE	Line number of householder	Household Composition
HHRACE	Race of householder	Household Composition
HHREL	Relationship of householder to household	Household Composition
HHSEX	Sex of householder	Household Composition
HHSPAN	Spanish origin of householder	Household Composition
HHSPOS	Line number of spouse of householder	Household Composition
HHTEN	Householder is owner/renter of unit	Household Composition
HHUTFU	Lodger contributes to household for utilities	Income
HHWLINEQ	Householder worked at all last week	Household Composition
HISTRY	Status of unit	Sample status, weights, interview status
HJOB	Reports to work at same place each day	Commuting
HOLES	Holes in floor	Unit Quality
HOTH	Other equipment used as supplemental heating equipment	Utilities
HOTPIP	Unit has hot & cold running water	Unit
HOWH	Rating of unit as a place to live	Unit Quality
HOWN	Rating of neighborhood as place to live	Neighborhood
HPMP	Heat pump used as supplemental heating equipment	Utilities
HUHS	What happened to the old unit	Recent Movers
IFBLOW	Fuses blown or circuit breakers tripped	Unit Quality
IFCOLD	Main heating equipment broke down	Unit Quality
IFDRY	Unit completely without running water	Unit Quality
IFFEE	Condo/co-op/assoc/mobile home park fee required	Housing Cost
IFOTHF	Other mobile home fees required	Mobile Homes
IFSEW	Sewage system broke down	Unit Quality
IFTLT	Any toilet breakdowns in last 3 months	Unit Quality
ILEAK	Any inside water leaks in last 12 months	Unit Quality
IMAINT	Receive adequate maintenance	Unit Quality
IMPROV	Funds from 1st home equity loan used for additions/improvements	Housing Cost
IMPRV2	Funds from 2nd home equity loan used for additions/improvements	Housing Cost
INCP	Offstreet parking included	Unit
INCPER	1st mortgage refinanced to increase payment	Housing Cost
INCPR2	2nd mortgage refinanced to increase payment	Housing Cost
INCS	Pay separate rent for land	Housing Cost
INPMT2	2nd mortgage payment includes insurance	Housing Cost
INSPMT	1st mortgage payment includes insurance	Housing Cost
INTF	Interest rate of 1st mortgage - fraction	Housing Cost
INTF2	Interest rate of 2nd mortgage - fraction	Housing Cost

INTW	Interest rate of 1st mortgage - whole #	Housing Cost
INTW2	Interest rate of 2nd mortgage - whole #	Housing Cost
INUSYR	Year came to U.S.	Household Composition
INV20K	Total savings/investments over \$25,000	Income
IPOV	Poverty level income	Income Limits FY2003
ISTATUS	Interview status	Sample status, weights, interview status

OTBUP	Other building on property used as living quarters	Unit
OTHCLD	Unit cold for some other reason	Unit Quality
OTHEST	Anyone home who can estimate nonrelative income	Income
OTHFN	Number of other finished rooms in unit	Unit
OTHLQ	Other living qtrs on property	Unit
OTHLQ1	Other apartments in building	Unit
OTHLQ2	Other apartments in building	Unit
OTHNHD	Other problems bothersome in neighborhood	Neighborhood
OTHPMT	Other charges including in 1st mortgage payment	Housing Cost
OTHREF	1st mortgage refinanced for other reason	Housing Cost
OTHRUN	Number of other unfinished rooms in unit	Unit
OTLEAK	Water leak from other outside source	Unit Quality
OTPMT2	Other charges including in 2nd mortgage payment	Housing Cost
OTREF2	2nd mortgage refinanced for other reason	Housing Cost
OUTPEL	Outside paint peeling or flaking	Lead Based Paint
OUTPNT	Any part of outside of unit painted	Lead Based Paint
OVEN	Unit has a working microwave oven	Unit
OWNHERE	Owner/resident manager lives on-site	Unit

OWNLOT	Household owns the land	Unit
PAFUR	Forced air furnace is parallel supplemental equipment	Utilities
PAPHLT	Received pamphlet about lead paint	Lead Based Paint
PAR	Line number of parent of person	Household Composition
PASS	Number of passengers in carpool	Commuting
PCOKST	Cookstove is parallel supplemental heating equipment	Utilities
PEELAM	Number of other rooms with peeling paint	Lead Based Paint
PEELSZ	Size of area of peeling/flaking paint	Lead Based Paint
PELECT	Built-in electric unit is parallel equipment	Utilities
PER	Number of persons in household	Household Composition
PERSERV	Management provides personal care assistance	Unit
PERSINT	Personal/telephone interview	Household Composition
PERSON	Line number of person	Household Composition
PERSON	Line number of person	Household Composition
PERUS1	Percentage of 1st mortgage loan used for additions/improvements	Housing Cost
PERUS2	Percentage of 2nd mortgage loan used for additions/improvements	Housing Cost
PFLOT	Vented room heater is parallel supplemental equipment	Utilities
PFRPL	Fireplace without inserts is parallel equipment	Utilities
PFRPLI	Fireplace w/ inserts is parallel equipment	Utilities
PHONE	Telephone available for use	Unit
PHOTH	Some other type is parallel supplemental equipment	Utilities
PHPMP	Heat pump is parallel supplemental equipment	Utilities
PILEAK	Inside water leak from leaking pipes	Unit Quality
PINCO2	2nd mortgage covers other units	Housing Cost
PINCOP	1st mortgage covers other units	Housing Cost
PLEAK	Inside water leak from plumbing fixtures	Unit Quality
PLF	Pipeless furnace used as supplemental heating equipment	Utilities
PLINE	Line number of person	Household Composition
PLUGS	Every room has working electrical plug	Unit
PLUMB	Complete plumbing facilities in unit	Unit Quality
PMAMT2	Amount of mortgage insurance included in 2nd mortgage	Housing Cost
PMIAMT	Amount of mortgage insurance included in 1st mortgage	Housing Cost
PMIPMT	1st mortgage payments include private mortgage insurance	Housing Cost
PMOVM	Month of previous move before this one	Recent Movers
PMOVYR	Year of previous move before this one	Recent Movers
PMPMT2	2nd mortgage payments include private mortgage insurance	Housing Cost
PMSA	1990 design PMSA code	Geography
PMT	Monthly payment for 1st mortgage	Housing Cost
PMT2	Monthly payment for 2nd mortgage	Housing Cost
PMT3	Monthly payment for 3rd mortgage	Housing Cost

PMT4	Monthly payment for all other mortgages	Housing Cost
POOR	Household income as percent of poverty line	Housing Cost
PORCH	Unit has porch/deck/balcony/patio	Unit
PORTH	Portable heaters used as supplemental heating equipment	Utilities
PPLF	Pipeless furnace is parallel supplemental equipment	Utilities
PQIDRI	Received interest, dividends, royalty income	Income
PQOTALM	Received VA/unemployment/child support/alimony/other income	Income
PQOTHNR	Other income received by nonrelative	Income
PQRETIR	Received retirement or survivor pension	Income
PQSAL	Wages/salary received by reference person/relative	Income
PQSALNR	Salary received by nonrelative	Income
PQSELF	Received self-employment income	Income
PQSELFNR	Received self-employment income by nonrelative	Income
PQSS	Received Social Security or Railroad Retirement pension	Income
PQSSI	Received Supplemental Security Income	Income
PQWELF	Received SSI, AFDC, other welfare	Income
PQWKCMP	Received SSDI, work. comp., vet. or other disability payments	Income
PRENT	Amount of rent actually paid	Housing Cost
PREOCC	Received unit as gift or purchased it	Household Composition
PROJ	Building owned by public housing authority	Housing Cost
PSTEAM	Steam/hot water system is parallel equipment	Utilities
PSTOVE	Woodburning stove is parallel supplemental equipment	Utilities
PSUDOTCT	Census tract for 1970, 1980 or 1990 containing case	Geography
PUBSEW	Unit connected to public sewer	Unit
PVALUE	Current value of unit	Housing Cost
PVOTHER	Sum of a person's other income	Income
PWT	Pure weight - inverse of prob of selection	Sample status, weights, interview status
QALIM	Received alimony or child support	Income
QBINV	Household has farm or business investments	Income
QBUS	Received income from business/farm/ranch	Income
QDIV	Received dividends from stock	Income
QFS1	Received food stamps in last 12 months	Income
QIDRI	(FAM)Interest/rental/royalty/estate income	Household Composition
QINT	Received interest from savings, cd, etc	Income
QMEN	Any income not already mentioned	Income
QOINV	Household has other investments	Income
QOTALM	(FAM)VA/unemploy/child support/alim/other	Household Composition
QOTHER	Received unemployment/vet payments/other inc	Income
QRENT	Received rental income	Income
QRETIR	(FAM)Received retirement or survivor pension	Household Composition

QSAVNG	Household has savings	Income
QSELF	(FAM)Received self-employment income	Household Composition
QSS	Received social security or pension	Income
QSSI	(FAM)Received supplemental security income	Household Composition
QWELF	Received ssi, afdc, other welfare	Income
QWELF		Income Limits FY2003
QWKCMP	Received workers company or other disability	Income
RAC	Cost of replacements/additions to unit	Upgrade and Remodeling
RACE	Race of person	Household Composition
RACOST		Upgrade and Remodeling
RAD	Cost of alteration/repair	Upgrade and Remodeling
RAH	Household member performed alteration/repair	Upgrade and Remodeling
RAILOK	Railings on common stairs firmly attached	Unit Quality
RAILOK1	Railings on stairs firmly attached	Unit Quality
RAILOK2	All stair railings firmly attached	Unit Quality
RAM	Has reserve annuity or home equity conversion mortgage	Housing Cost
RAMAP	Applied for reverse annuity mortgage	Housing Cost
RAMORT	Heard of reverse annuity mortgage	Housing Cost
RAN	Number of replacements/additions made to unit	Upgrade and Remodeling
RAS	Type of alteration/repair - 1999 version	Upgrade and Remodeling
RAS		Income Limits FY2003
RATS	Rats seen in unit recently	Unit Quality
RAW	Alteration/repair is addition/replacement	Upgrade and Remodeling
RAY	Year alteration/repair completed	Upgrade and Remodeling
RCARP	Receive help w/ transportation expenses	Income
RCLOT	Receive help with clothing expenses	Income
RCNTRL	Rent limited by rent control/stabilization	Housing Cost
RCOST	Receive help with rent payments	Income
RECRM	Number of recreation rooms in unit	Unit
REDMON	Refinanced to reduce monthly payment	Housing Cost
REDPA2	Reason for refinancing reduced payment of 2nd	Housing Cost
REDPAY	Reason for refinancing reduced payment of 1st	Housing Cost
REFI	Mortgage a refinancing of previous mortgage	Housing Cost
REFI2	2nd mortgage a refinancing of 1st mortgage	Housing Cost
REFR	Unit has a working refrigerator	Unit
REGION	Census region	Geography
REGMOR	Number of regular mortgages on unit	Housing Cost
REL	Relationship of person to reference person	Household Composition
REMP	Employed by household	Household Composition
RENEW	Income info required for lease renewal	Housing Cost

RENT	Amount reported for payment period in FRENT	Housing Cost
REPHA	Report income to public housing authority	Income
RESMOR	Amount of 1st mortgage applies only to unit	Housing Cost
RESMR2	Amount of 2nd mortgage applies only to unit	Housing Cost
RESPTYP	Type of respondent	Household Composition
REUAD	Reason unit got added to sample	Sample status, weights, interview status
RGROC	Receive help with grocery bills	Income
RKIDC	Receive help with child care payments	Income
RLEAK	Water leak in roof	Unit Quality
RMEDI	Receive help with medical bills	Income
RMOV	Mover group number	Recent Movers
RNTADJ	Rent adjusted because relationship w/ owner	Housing Cost
RNTDUE	Frequency of lodger's rent payment to household	Income
ROOMS	Number of rooms in unit	Unit
ROOMSA	Rooms used for both business & other	Unit
ROOMSB	Number of rooms used for both business & other	Unit
ROTHE	Received other assistance making ends meet	Income
RUTIL	Receive help with utility bills	Income
S150MV	Vacant/URE unit <= 150 miles of owners res.	Sample status, weights, interview status
SAFUR	Forced air furnace is supplemental heating equipment	Utilities
SAL	Wage & salary income of person	Income
SAMEDU	Same HU as last enumeration	Sample status, weights, interview status
SAMEHH	Same household members live in unit	Household Composition
SAMEHH2	Same household members live in unit (recode)	Household Composition
SATPOL	Neighborhood police protection satisfactory	Neighborhood
SCH	Neighborhood public Elementary school satisfactory	Neighborhood
SCHCLS	Neighborhood public Elementary school within 1 mile	Neighborhood
SCHM	Public Elementary school so bad you want to move	Neighborhood
SCHNO	Nobody in household attends school	Household Composition
SCHOTH	Someone in household attends other type of school	Household Composition
SCHPRI	Someone in household attends private school	Household Composition
SCHPUB	Someone in household attends public school	Household Composition
SCOAL	Supplemental heating equipment uses coal/coke	Utilities
SCOKST	Cookstove is supplemental heating equipment	Utilities
SELECT	Built-in electric units are supplemental heat equipment	Utilities
SELL	Borrowed 1st mortgage from former owner	Housing Cost
SELL2	Borrowed 2nd mortgage from former owner	Housing Cost
SEWDIS	Type of sewage disposal	Unit
SEWDUS	Number of units connected to sewage system	Unit
SEX	Sex of person	Household Composition

SFLIN	Unvented room heaters are supplemental heat equipment	Utilities
SFLOT	Vented room heaters are supplemental heat equipment	Utilities
SFRPL	Fireplace without inserts is supplemental equipment	Utilities
SFRPLI	Fireplace w/ inserts is supplemental heat equipment	Utilities
SGAS	Supplemental heating equipment uses gas	Utilities
SHARAT	Unit shares attic or basement	Unit
SHARFR	Unit shares furnace or boiler	Unit
SHARPF	Unit shares plumbing facilities	Neighborhood
SHOTH	Some other type is supplemental heating equipment	Utilities
SHP	Neighborhood shopping satisfactory	Neighborhood
SHPCLS	Neighborhood stores within 1 mile	Neighborhood
SHPMP	Heat pump is supplemental heating equipment	Utilities
SINHV	Inherited this vacant/URE unit	Unit
SINK	Unit has kitchen sink	Unit
SINVV	Own vacant/URE unit as an investment	Unit
SJUICE	Supplemental heating equipment uses electricity	Utilities
SKERO	Supplemental heating equipment uses kerosene	Utilities
SMPEEL	Peeling paint more/less than 1/2 door	Lead Based Paint
SMSA	1980 design PMSA code	Geography
SNDPNT	Old paint sanded or scraped	Lead Based Paint
SNITEV	Number of nights owner spends at vacant/URE unit	Household Composition
SOIL	Supplemental heating equipment uses fuel oil	Utilities
SOTHER	Supplemental heating equipment uses other fuel	Utilities
SOTHV	Own vacant/URE unit for some other reason	Unit
SPAN	Spanish origin of person	Household Composition
SPLF	Pipeless furnace is supplemental heating equipment	Utilities
SPORTH	Portable heaters are supplemental heating equipment	Utilities
SPOS	Line number of spouse of person	Household Composition
SRECV	Own vacant/URE unit for recreation	Unit
SRENTV	Number of nights vacant/URE unit was rented out	Unit
SSELV	Want to sell vacant/URE unit - not sold yet	Unit
SSTEAM	Steam/hot water system is supplemental heat equipment	Utilities
SSTOVE	Woodburning stove is supplemental heating equipment	Utilities
SSUN	Supplemental heating equipment uses solar energy	Utilities
STATE	FIPS state code	Geography
STATUS	Interview status	Household Composition
STATUS	Interview status	Household Composition
STEAM	Steam system used as supplemental heating equipment	Unit
STORG	Number of storage rooms/pantries in unit	Unit
STOVE	Wood stove used as supplemental heating equipment	Utilities

STRNA	Neighborhood has heavy street noise/traffic	Neighborhood
STRNB	Neighborhood street noise/traffic bothersome	Neighborhood
STRNC	St. noise/traffic so bad you want to move	Neighborhood
SUBFIX	Household got government loan/grant for alterations	Upgrade and Remodeling
SUBMOR	Government program provides 1st mortgage	Housing Cost
SUBMR2	Government program provides 2nd mortgage	Housing Cost
SUBMR3	Government program provides 3rd mortgage	Housing Cost
SUBMR4	Government program provides 4th & other mortgage	Housing Cost
SUBRNT	Government subsidizes rent for unit	Income
SUBRNT1	Government subsidizes rent for unit	Income
SUBRNT2	Government subsidizes rent for unit	Income
SWOOD	Supplemental heating equipment uses wood	Utilities
SXUREV	Vacant/URE unit was previous residence	Sample status, weights, interview status
TADJ	Purchase price changed due to inspection/test	Housing Cost
TALWIR	Aluminum wiring inspected before purchase	Unit Quality
TASB	Unit tested for asbestos before purchase	Unit Quality
TAXPMT	Property taxes included in 1st mortgage	Housing Cost
TELAV	Telephone available elsewhere	Unit
TELHH	Telephone in housing unit	Unit
TEN	This person is owner/renter of unit	Household Composition
TENURE	Owner/renter status of unit	Unit
TERM	Term of 1st mortgage	Housing Cost
TERM2	Term of 2nd mortgage	Housing Cost
TIMEJ	Length of trip to work	Commuting
TIMSHR	Ownership of unit time shared	Unit
TLRMOV	Number of people moved into unit in last 2 years	Recent Movers
TOILET	Unit has a flush toilet	Unit Quality
TPARK	Number of mobile homes in group	Mobile Homes
TPBPAI	Unit tested for lead paint before purchase	Lead Based Paint
TPBPIP	Lead pipes inspected before purchase	Lead Based Paint
TPBSOL	Lead solder inspected before purchase	Lead Based Paint
TRADON	Unit tested for radon before purchase	Unit Quality
TRAN	Method of transportation to work	Commuting
TRASH	Unit has working built-in trash compacter	Unit
TREP	Repairs made because of inspection/test	Unit Quality
TRN	Is the public transportation satisfactory?	Commuting
TRUCKS	Number of vans or trucks for household use	Commuting
TUB	Unit has a bathtub or shower	Unit
TWATER	Water quality tested before purchase	Unit Quality
TXPMT2	Property taxes included in 2nd mortgage	Housing Cost

TXRE	Received real estate property tax rebate	Housing Cost
TYPE	Structure type	Unit
UNITSF	Square footage of unit	Unit
USEGAS	Household uses gas	Utilities
USETRN	Someone in household uses Public transportation	Commuting
USFCAM	Amount of square foot change in unit	Upgrade and Remodeling
USFCHG	Change in square footage of unit	Upgrade and Remodeling
VACANCY	Vacancy status	Unit
VACVAC	Unit for vacation or other short-term use	Sample status, weights, interview status
VALUE	Current market value of unit	Housing Cost
VARM	1st mortgage changes for other reason	Housing Cost
VARM2	2nd mortgage changes for other reason	Housing Cost
VARY	1st mortgage payments change	Housing Cost
VARY2	2nd mortgage payments change	Housing Cost
VCHER	Received voucher to help pay rent	Income
VEHCL	Drive to work alone or with others	Commuting
VOTHER	Total amount of other income	Income
VOTHER		Income Limits FY2003
VOTHER2		Income
WALLX	# inside walls/ceilings repaired/replaced	Upgrade and Remodeling
WALREP	Inside walls/ceilings repaired/replaced	Upgrade and Remodeling
WASH	Unit has a working washing machine	Unit
WATER	Source of water for unit	Unit
WATERD	Source of drinking water	Unit
WATERS	Water safe for drinking & cooking	Unit Quality
WEIGHT	Final weight based on 1980 Census geography	Sample status, weights, interview status
WELDUS	Number of units this water source serves	Unit
WELL	Well drilled or dug	Unit
WFPROP	Unit is waterfront property	Unit
WFUEL	Fuel used most to heat water	Utilities
WGT90GEO	Final weight based on 1990 Census geography	Sample status, weights, interview status
WHAVL	Liked unit because only one available	Recent Movers
WHDSN	Liked unit because of room layout/design	Recent Movers
WHDY	Number of days worked at home	Household Composition
WHEXT	Liked unit because of exterior appearance	Recent Movers
WHFIN	Liked unit for financial reasons	Recent Movers
WHHRB	# hours worked at home (self-employed)	Household Composition
WHHRW	# hours worked at home (wage & salary)	Household Composition
WHKIT	Liked unit because of kitchen	Recent Movers
WHNGET	Year unit bought/obtained/received	Unit

WHOME	Work at home for employer	Household Composition
WHOTH	Liked unit for other reasons	Recent Movers
WHQUL	Liked unit because of construction quality	Recent Movers
WHSIZ	Liked unit because of size	Recent Movers
WHYCD1	Unit cold due to utility interruption	Unit Quality
WHYCD2	Unit cold due to inadeq. heating capacity	Unit Quality
WHYCD3	Unit cold due to inadequate insulation	Unit Quality
WHYCD4	Unit cold due to cost of heating	Unit Quality
WHYCD5	Unit cold because of some other reason	Unit Quality
WHYMOVE	Main reason moved	Recent Movers
WHYRD	Liked unit because of yard/trees/view	Recent Movers
WHYTOH	Main reason this unit was chosen	Recent Movers
WHYTON	Main reason this neighborhood was chosen	Recent Movers
WINREP	Windows repaired or replaced	Upgrade and Remodeling
WINUS	Place of work outside the U.S.	Household Composition
WINX	Number of windows repaired or replaced	Upgrade and Remodeling
WLEAK	Water leak in wall or closed door/window	Unit Quality
WLINEQ	Work at all last week	Household Composition
WMCHPE	Moved here for less expensive rent/maintenance	Recent Movers
WMCHTN	Moved here to own not rent or vice versa	Recent Movers

XREL	Previous unit owner/rented by relative	Recent Movers
XTEN	Tenure of previous residence	Recent Movers
XUNIT	Type of unit of previous residence	Recent Movers
YRMOR	Year 1st mortgage obtained	Housing Cost
YRMOR2	Year 2nd mortgage obtained	Housing Cost
YRRND	Unit suitable for year round use	Unit
ZADEQ	Recoded adequacy of housing	Unit Quality
ZADULT	Number of adults 18+ in household	Household Composition
ZINC	Family income	Income
ZINC2	Household Income	Income
ZINCH	This month's income same as 1 year ago	Income
ZINCN	Expected income in next 12 months	Income
ZMVGRP	Total Number of mover groups in the household	Household Composition
ZONE	Defined area of > 100,000 population	Geography
ZSMHC	Monthly housing costs	Housing

Variables Listed by Topic

BBLDG	Type B noninterview building	Sample status, weights, interview status
BOARDU	Type B unit boarded up	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
CONTROL	Control number	Sample status, weights, interview status
DATE	Interview date	Sample status, weights, interview status
HISTORY	Status of unit	Sample status, weights, interview status
ISTATUS	Interview status	Sample status, weights, interview status
MARKET	Unit for rent only, sale only, or either	Sample status, weights, interview status
MARKT	Unit currently for rent or sale	Sample status, weights, interview status
MOVAC	# months unit has been vacant	Sample status, weights, interview status
NOINT	Noninterview reason	Sample status, weights, interview status
PWT	Pure weight - inverse of prob of selection	Sample status, weights, interview status
REUAD	Reason unit got added to sample	Sample status, weights, interview status
S150MV	Vacant/URE unit <= 150 miles of owners res.	Sample status, weights, interview status
SAMEDU	Same HU as last enumeration	Sample status, weights, interview status
SXUREV	Vacant/URE unit was previous residence	Sample status, weights, interview status
VACVAC	Unit for vacation or other short-term use	Sample status, weights, interview status
WEIGHT	Final weight based on 1980 Census geography	Sample status, weights, interview status
WGT90GEO	Final weight based on 1990 Census geography	Sample status, weights, interview status
CMSA	1980 design CMSA code	Geography
COUNTY	County code	Geography
METRO	Central city / suburban status	Geography
METRO3	Central city / suburban status	Geography
PMSA	1990 design PMSA code	Geography
PSUDOTCT	Census tract for 1970, 1980 or 1990 containing case	Geography
REGION	Census region	Geography
SMSA	1980 design PMSA code	Geography
STATE	FIPS state code	Geography
ZONE	Defined area of > 100,000 population	Geography

ACCESS	Direct access to unit	Unit
ACCESSB	Entry system required to access building	Unit
AGERES	Age restricted development	Unit
AIR	Room air conditioner	Unit
AIRSYS	Central air conditioner	Unit
ANYCAR	Wall-to-wall carpeting in any area of unit	Unit
ANYPNT	Any painting done on inside of unit	Unit
ANYRUG	Any rugs or carpeting in unit	Unit
APTFL	Number of floors in the apartment itself	Unit
ASSTSERV	Manager provides personal care assistance	Unit
ATBSUN	Number of unfinished attics/basements in unit	Unit
BATHS	Number of full bathrooms in unit	Unit
BDCARP	Wall-to-wall carpeting in bedroom	Unit
BEDRMS	Number of bedrooms in unit	Unit
BEDX	Number of bedrooms with wall-to-wall carpeting	Unit
BUILT	Year unit was built	Unit
BURNER	Unit has working built-in cooking burners	Unit
BUSIN	Number of offices/business rooms in unit	Unit
BUSPER	# rooms used for business/personal use	Unit
CELLAR	Unit has a basement	Unit
CLIMB	Number of floors from main entrance to apartment	Unit
CONDO	Unit is condominium or cooperative	Unit
COOK	Unit has working cookstove or range/oven	Unit
DENS	Number of dens/libraries/tv rooms in unit	Unit
DINING	Number of dining rooms in unit	Unit
DIRAC	Number of offices having direct access	Unit
DISH	Unit has working dishwasher	Unit
DISPL	Unit has working garbage disposal	Unit
DRSHOP	Medical office/community store on property	Unit
DRY	Unit has working clothes dryer	Unit
DSTEAM	Steam/hot water system-DK if supplemental/parallel	Unit
DSTOVE	Woodburning stove - DK if supplemental/parallel	Unit
EBAR	Windows covered with metal bars	Unit
EHEIGHT	Height of apartment buildings within 1/2 blk	Unit
ELEV	Working passenger elevator	Unit
EXCLUS	Number offices used exclusively for business	Unit
FAMRM	Number of family rooms/great rooms in unit	Unit
FLOODPLN	Unit in a flood plain	Unit
FLOORS	Number of stories in building	Unit

FLOT	Heating equipment vented to outside	Unit
FPINS	Fireplace has inserts	Unit
FPLWK	Unit has useable fireplace	Unit
FRPL	Fireplace does not have inserts	Unit
FRPLI	Fireplace has inserts	Unit
FRSTOC	Current occupants are first occupants	Unit
GARAGE	Garage or carport included with unit	Unit
HALB	Additional half bathrooms in unit	Unit
HALFB	Number of half bathrooms in unit	Unit
HOTPIP	Unit has hot & cold running water	Unit
INCP	Offstreet parking included	Unit
KEXCLU	Kitchen facilities for household use only	Unit
KITCH	Number of kitchens in unit	Unit
KITCHEN	Complete kitchen facilities in unit	Unit
LAT70S	Year unit built in late 1970s	Unit
LAUNDRY	Number of laundry/utility rooms in unit	Unit
LIVING	Number of living rooms in unit	Unit
LOT	Square footage of lot	Unit
LVCARP	Wall-to-wall carpeting in living room	Unit
MOBILTYP	Manufactured/mobile home type	Unit
MOPERM	# months since occupied as permanent home	Unit
NOOTHRM	No other rooms in unit	Unit
NUMAIR	Number of room air conditioners	Unit
NUNIT2	Structure type	Unit
NUNITS	Number of units in building	Unit
OARSYS	Unit has another central a/c system	Unit
OBEDRM	Number of offices used for bedroom	Unit
ODIN	Number of offices used as dining room	Unit
ODIRAC	Number of offices having direct access	Unit
OKITCH	Number of offices used for kitchen	Unit
OLIVIN	Number of offices used for living room	Unit
OOTHRM	Number of offices used for other room	Unit
OTBUP	Other building on property used as living quarters	Unit
OTHFN	Number of other finished rooms in unit	Unit
OTHLQ	Other living quarters on property	Unit
OTHLQ1	Other apartments in building	Unit
OTHLQ2	Other apartments in building	Unit
OTHRUN	Number of other unfinished rooms in unit	Unit
OVEN	Unit has a working microwave oven	Unit
OWNHERE	Owner/resident manager lives on-site	Unit

OWNLOT	Household owns the land	Unit
PERSERV	Management provides personal care assistance	Unit
PHONE	Telephone available for use	Unit
PLUGS	Every room has working electrical plug	Unit
PORCH	Unit has porch/deck/balcony/patio	Unit
PUBSEW	Unit connected to public sewer	Unit
RECRM	Number of recreation rooms in unit	Unit
REFR	Unit has a working refrigerator	Unit
ROOMS	Number of rooms in unit	Unit
ROOMSA	Rooms used for both business & other	Unit
ROOMSB	Number of rooms used for both business & other	Unit
SEWDIS	Type of sewage disposal	Unit
SEWDUS	Number of units connected to sewage system	Unit
SHARAT	Unit shares attic or basement	Unit
SHARFR	Unit shares furnace or boiler	Unit
SINHV	Inherited this vacant/URE unit	Unit
SINK	Unit has kitchen sink	Unit
SINVV	Own vacant/URE unit as an investment	Unit
SOTHV	Own vacant/URE unit for some other reason	Unit
SRECV	Own vacant/URE unit for recreation	Unit
SRENTV	Number of nights vacant/URE unit was rented out	Unit
SSELV	Want to sell vacant/URE unit - not sold yet	Unit
STEAM	Steam system used as supplemental heating equipment	Unit
STORG	Number of storage rooms/pantries in unit	Unit
TELAV	Telephone available elsewhere	Unit
TELHH	Telephone in housing unit	Unit
TENURE	Owner/renter status of unit	Unit
TIMSHR	Ownership of unit time shared	Unit
TRASH	Unit has working built-in trash compacter	Unit
TUB	Unit has a bathtub or shower	Unit
TYPE	Structure type	Unit
UNITSF	Square footage of unit	Unit
VACANCY	Vacancy status	Unit
WASH	Unit has a working washing machine	Unit
WATER	Source of water for unit	Unit
WATERD	Source of drinking water	Unit
WELDUS	Number of units this water source serves	Unit
WELL	Well drilled or dug	Unit
WFPROP	Unit is waterfront property	Unit
WHNGET	Year unit bought/obtained/received	Unit

YRRND	Unit suitable for year round use	Unit
BADSTEP	Loose/broken/missing steps in common stairs	Unit Quality
BDSTPQ	Loose/broken/missing steps in common stairs	Unit Quality
BDMNT	Satisfaction with building maintenance	Unit Quality
BLEAK	Water leak in basement	Unit Quality
BSINK	Unit has a bathroom sink	Unit Quality
CRACKS	Open cracks wider than dime	Unit Quality
DFIRE	Type C-30/31 severely damaged by fire	Unit Quality
DISAS	Type C severely damaged by natural disaster	Unit Quality
DORREP	Any doors repaired/replaced in unit	Unit Quality
EBOARD	Windows boarded up	Unit Quality
EBROKE	Windows broken	Unit Quality
ECRUMB	Holes/cracks or crumbling in foundation	Unit Quality
EGOOD	No listed conditions seen in/on unit	Unit Quality
EHOLER	Roof has holes	Unit Quality
ELEVWK	At least one elevator in working order	Unit Quality
EMISSR	Roof missing shingles/other roofing materials	Unit Quality
EMISSW	Outside walls missing siding/bricks/etc	Unit Quality
ESAGR	Roof's surface sags or is uneven	Unit Quality
ESLOPW	Outside walls slope/lean/slant/buckle	Unit Quality
EVROD	Evidence of rodents in unit	Unit Quality
EXPOSE	Type B interior exposed to elements	Unit Quality
FREEZE	Unit cold for 24+ hrs was uncomfortable	Unit Quality
GRDMNT	Satisfaction with grounds maintenance	Unit Quality
HOLES	Holes in floor	Unit Quality
HOWH	Rating of unit as a place to live	Unit Quality
IFBLOW	Fuses blown or circuit breakers tripped	Unit Quality
IFCOLD	Main heating equipment broke down	Unit Quality
IFDRY	Unit completely without running water	Unit Quality
IFSEW	Sewage system broke down	Unit Quality
IFTLT	Any toilet breakdowns in last 3 months	Unit Quality
ILEAK	Any inside water leaks in last 12 months	Unit Quality
IMAINT	Receive adequate maintenance	Unit Quality
LEAK	Any outside water leaks in last 12 months	Unit Quality
LTSOK	Hallway lights working	Unit Quality
LTSOK1	Hallway lights working	Unit Quality
LTSOK2	All hallway lights working	Unit Quality
M3ROD	Rodents seen in unit recently	Unit Quality
MAJR1	Starts major maintenance/repairs soon enough	Unit Quality

MAJR2	Solves major problems quickly	Unit Quality
MAJR3	Polite/considerate of home (major repairs)	Unit Quality
MICE	Mice seen in unit recently	Unit Quality
MINR1	Starts minor maintenance/repairs soon enough	Unit Quality
MINR2	Solves minor problems quickly	Unit Quality
MINR3	Polite/considerate of home (minimum repairs)	Unit Quality
NLEAK1	Inside water leak from some other source	Unit Quality
NLEAK2	Source of inside water leak unknown	Unit Quality
NOTSUR	Not sure if rodents were rats or mice	Unit Quality
NOWIRE	Electrical wiring concealed by walls/wiring	Unit Quality
NUMBLOW	# times fuses blown or breakers tripped	Unit Quality
NUMCOLD	# times main heating equipment broke down	Unit Quality
NUMDRY	# times completely without running water	Unit Quality
NUMSEW	Number of sewage system breakdowns	Unit Quality
NUMTLT	Number of toilet breakdowns 6 hours or more	Unit Quality
OMAINT	Buildings & grounds maintained properly	Unit Quality
OTHCLD	Unit cold for some other reason	Unit Quality
OTLEAK	Water leak from other outside source	Unit Quality
PILEAK	Inside water leak from leaking pipes	Unit Quality
PLEAK	Inside water leak from plumbing fixtures	Unit Quality
PLUMB	Complete plumbing facilities in unit	Unit Quality
RAILOC	Railings on common stairs firmly attached	Unit Quality
RAILOC1	Railings on stairs firmly attached	Unit Quality
RAILOC2	All stair railings firmly attached	Unit Quality
RATS	Rats seen in unit recently	Unit Quality
RLEAK	Water leak in roof	Unit Quality
TALWIR	Aluminum wiring inspected before purchase	Unit Quality
TASB	Unit tested for asbestos before purchase	Unit Quality
TOILET	Unit has a flush toilet	Unit Quality
TRADON	Unit tested for radon before purchase	Unit Quality
TREP	Repairs made because of inspection/test	Unit Quality
TWATER	Water quality tested before purchase	Unit Quality
WATERS	Water safe for drinking & cooking	Unit Quality
WHYCD1	Unit cold due to utility interruption	Unit Quality
WHYCD2	Unit cold due to inadeq. heating capacity	Unit Quality
WHYCD3	Unit cold due to inadequate insulation	Unit Quality
WHYCD4	Unit cold due to cost of heating	Unit Quality
WHYCD5	Unit cold because of some other reason	Unit Quality
WLEAK	Water leak in wall or closed door/window	Unit Quality
WTRHRL	Source of inside water leak is broken water heat	Unit Quality

ZADEQ	Recorded adequacy of housing	Unit Quality
ADDTN2	Percentage of 2nd mortgage used for additions/improvements	Housing Cost
ADDTNS	Percentage of 1st mortgage used for additions/improvements	Housing Cost
AMMORT	Amount of 1st mortgage when acquired	Housing Cost
AMMRT2	Amount of 2nd mortgage when acquired	Housing Cost
AMMRT3	Amount borrowed by 3rd mortgage	Housing Cost
AMMRT4	Amount borrowed by 4th & other mortgages	Housing Cost
AMRTZ	Years needed to pay off 1st mortgage	Housing Cost
AMRTZ2	Years needed to pay off 2nd mortgage	Housing Cost
AMTI	Annual cost of homeowners insurance	Housing Cost
AMTM	Amount of other charges included in 1st mortgage	Housing Cost
AMTM2	Amount of other charges included in 2nd mortgage	Housing Cost
AMTT	Annual cost of garbage & trash	Housing Cost
AMTW	Annual cost of water & sewage	Housing Cost
AMTX	Annual real estate tax payment	Housing Cost
ARM	1st mortgage changes due to interest rate	Housing Cost
ARM2	2nd mortgage changes due to interest rate	Housing Cost
ARMASK	1st mortgage changes for other reason	Housing Cost
ARMASK2	2nd mortgage changes for other reason	Housing Cost
BANK	1st mortgage borrowed from bank	Housing Cost
BANK2	2nd mortgage borrowed from bank	Housing Cost
BLOON	1st mortgage's last payment biggest	Housing Cost
BLOON2	2nd mortgage's last payment biggest	Housing Cost
BUYI	Household has homeowners insurance	Housing Cost
BUYT	Pay for garbage/trash separately	Housing Cost
BUYT2	Pay for garbage/trash separately	Housing Cost
BUYW	Pay for water/sewage separately	Housing Cost
BUYW2	Pay for water/sewage separately	Housing Cost
CANVAR	Term of 1st mortgage can vary	Housing Cost
CANVR2	Term of 2nd mortgage can vary	Housing Cost
CASH	Amount of cash received from 1st mortgage	Housing Cost
CASH2	Amount of cash received from 2nd mortgage	Housing Cost
CONFEE	Monthly condo/homeowner's association/mobile home fee	Housing Cost
CPRICE	Cost of construction plus value of land	Housing Cost
CSTMNT	Annual cost for routine maintenance	Housing Cost
DWNPAY	Main source of downpayment on unit	Housing Cost
EXTLN2	2nd mortgage refinanced to renew/extend	Housing Cost
EXTLON	1st mortgage refinanced to renew/extend	Housing Cost
FIXED	1st mortgage changes for taxes/insurance	Housing Cost

FIXED2	2nd mortgage changes for taxes/insurance	Housing Cost
FLRENT	Frequency of land/site rent payment	Housing Cost
FMHOTF	Frequency of other mobile home fee payments	Housing Cost
FRENT	Frequency of rent payment	Housing Cost
GPM	1st mortgage payments rise on fixed schedule part	Housing Cost
GPM2	2nd mortgage payments rise on fixed schedule part	Housing Cost
GPMW	1st mortgage payments rise on fixed schedule whole	Housing Cost
GPMW2	2nd mortgage payments rise on fixed schedule whole	Housing Cost
GTCAS2	2nd mortgage refinanced to receive cash	Housing Cost
GTCASH	1st mortgage refinanced to receive cash	Housing Cost
HEARHS	How first heard about this unit	Housing Cost
HEBAL1	Outstanding loan against 1st home equity loan	Housing Cost
HEBAL2	Outstanding loan against 2nd home equity loan	Housing Cost
HEBAL3	Outstanding loan against 3rd home equity loan	Housing Cost
HEBAM1	Outstanding balance on 1st home equity loan	Housing Cost
HEBAM2	Outstanding balance on 2nd home equity loan	Housing Cost
HEBAM3	Outstanding balance on 3rd home equity loan	Housing Cost
HECR1	Credit limit on 1st home equity loan	Housing Cost
HECR2	Credit limit on 2nd home equity loan	Housing Cost
HECR3	Credit limit on 3rd home equity loan	Housing Cost
HEINF1	Interest rate on 1st home equity loan - fraction	Housing Cost
HEINF2	Interest rate on 2nd home equity loan - fraction	Housing Cost
HEINF3	Interest rate on 3rd home equity loan - fraction	Housing Cost
HEINW1	Interest rate on 1st home equity loan - whole #	Housing Cost
HEINW2	Interest rate on 2nd home equity loan - whole #	Housing Cost
HEINW3	Interest rate on 3rd home equity loan - whole #	Housing Cost
HEL	Has a home equity loan	Housing Cost
HELC	Has a home equity line of credit	Housing Cost
HELCN	Number of home equity lines of credit	Housing Cost
HELMP1	1st home equity loan lump sum	Housing Cost
HELMP2	2nd home equity loan lump sum	Housing Cost
HELMP3	3rd home equity loan lump sum	Housing Cost
HELUMN	Number of lump sum home equity loans	Housing Cost
HELUMP	Has a lump sum home equity loan	Housing Cost
HENUM	Number of home equity loans	Housing Cost
HEPMT1	1st home equity loan monthly payment	Housing Cost
HEPMT2	2nd home equity loan monthly payment	Housing Cost
HEPMT3	3rd home equity loan monthly payment	Housing Cost
HETYP1	1st home equity loan type	Housing Cost
HETYP2	2nd home equity loan type	Housing Cost

HETYP3	3rd home equity loan type	Housing Cost
IFFEE	Condo/co-op/assoc/mobile home park fee required	Housing Cost
IMPROV	Funds from 1st home equity loan used for additions/improvements	Housing Cost
IMPRV2	Funds from 2nd home equity loan used for additions/improvements	Housing Cost
INCPER	1st mortgage refinanced to increase payment	Housing Cost
INCPR2	2nd mortgage refinanced to increase payment	Housing Cost
INCS	Pay separate rent for land	Housing Cost
INPMT2	2nd mortgage payment includes insurance	Housing Cost
INSPMT	1st mortgage payment includes insurance	Housing Cost
INTF	Interest rate of 1st mortgage - fraction	Housing Cost
INTF2	Interest rate of 2nd mortgage - fraction	Housing Cost
INTW	Interest rate of 1st mortgage - whole #	Housing Cost
INTW2	Interest rate of 2nd mortgage - whole #	Housing Cost
LANDC	Land contract for mortgage	Housing Cost
LANPMT	Land rent included with mortgage payment	Housing Cost
LOOKHS	Looked at both houses/mobile home & apartments	Housing Cost
LOOKNS	Looked at other neighborhoods	Housing Cost
LOON	% of 1st mortgage due in last payment	Housing Cost
LOON2	% of 2nd mortgage due in last payment	Housing Cost
LOWIN2	2nd mortgage refinanced to get lower interest	Housing Cost
LOWINT	1st mortgage refinanced to get lower interest	Housing Cost
LPRICE	Purchase price of unit and land	Housing Cost
LRENT	Land/site rent	Housing Cost
LVALUE	Current value of land	Housing Cost
MATBUY	Got 1st mortgage in same year bought unit	Housing Cost
MATBY2	Got 2nd mortgage in same year bought unit	Housing Cost
MCNT	Number of regular mortgages	Housing Cost
MCOM	1st mortgage covers business on property	Housing Cost
MCOM2	2nd mortgage covers business on property	Housing Cost
MFARM	1st mortgage covers farm land	Housing Cost
MFARM2	2nd mortgage covers farm land	Housing Cost
MG	Any mortgages on this property	Housing Cost
MH32	Mobile home on property used for living quarters	Housing Cost
MHOTFE	Amount of other required mobile home fees	Housing Cost
MORTIN	Type of 1st mortgage	Housing Cost
MORTN2	Type of 2nd mortgage	Housing Cost
MRTYP1	Type of 1st mortgage	Housing Cost
MRTYP2	Type of 2nd mortgage	Housing Cost
NEWMOR	1st mortgage new or assumed	Housing Cost
NEWMR2	2nd mortgage new or assumed	Housing Cost

NUMMOR	Number of mortgages including home equity loans	Housing Cost
OTHPMT	Other charges including in 1st mortgage payment	Housing Cost
OTHREF	1st mortgage refinanced for other reason	Housing Cost
OTPMT2	Other charges including in 2nd mortgage payment	Housing Cost
OTREF2	2nd mortgage refinanced for other reason	Housing Cost
PERUS1	Percentage of 1st mortgage loan used for additions/improvements	Housing Cost
PERUS2	Percentage of 2nd mortgage loan used for additions/improvements	Housing Cost
PINCO2	2nd mortgage covers other units	Housing Cost
PINCOP	1st mortgage covers other units	Housing Cost
PMAMT2	Amount of mortgage insurance included in 2nd mortgage	Housing Cost
PMIAMT	Amount of mortgage insurance included in 1st mortgage	Housing Cost
PMIPMT	1st mortgage payments include private mortgage insurance	Housing Cost
PMPMT2	2nd mortgage payments include private mortgage insurance	Housing Cost
PMT	Monthly payment for 1st mortgage	Housing Cost
PMT2	Monthly payment for 2nd mortgage	Housing Cost
PMT3	Monthly payment for 3rd mortgage	Housing Cost
PMT4	Monthly payment for all other mortgages	Housing Cost
POOR	Household income as percent of poverty line	Housing Cost
PRENT	Amount of rent actually paid	Housing Cost
PROJ	Building owned by public housing authority	Housing Cost
PVALUE	Current value of unit	Housing Cost
RAM	Has reserve annuity or home equity conversion mortgage	Housing Cost
RAMAP	Applied for reverse annuity mortgage	Housing Cost
RAMORT	Heard of reverse annuity mortgage	Housing Cost
RCNTRL	Rent limited by rent control/stabilization	Housing Cost
REDMON	Refinanced to reduce monthly payment	Housing Cost
REDPA2	Reason for refinancing reduced payment of 2nd	Housing Cost
REDPAY	Reason for refinancing reduced payment of 1st	Housing Cost
REFI	Mortgage a refinancing of previous mortgage	Housing Cost
REFI2	2nd mortgage a refinancing of 1st mortgage	Housing Cost
REGMOR	Number of regular mortgages on unit	Housing Cost
RENEW	Income info required for lease renewal	Housing Cost
RENT	Amount reported for payment period in FRENT	Housing Cost
RESMOR	Amount of 1st mortgage applies only to unit	Housing Cost
RESMR2	Amount of 2nd mortgage applies only to unit	Housing Cost
RNTADJ	Rent adjusted because relationship w/ owner	Housing Cost
SELL	Borrowed 1st mortgage from former owner	Housing Cost
SELL2	Borrowed 2nd mortgage from former owner	Housing Cost
SUBMOR	Government program provides 1st mortgage	Housing Cost
SUBMR2	Government program provides 2nd mortgage	Housing Cost

SUBMR3	Government program provides 3rd mortgage	Housing Cost
SUBMR4	Government program provides 4th & other mortgage	Housing Cost
TADJ	Purchase price changed due to inspection/test	Housing Cost
TAXPMT	Property taxes included in 1st mortgage	Housing Cost
TERM	Term of 1st mortgage	Housing Cost
TERM2	Term of 2nd mortgage	Housing Cost
TXPMT2	Property taxes included in 2nd mortgage	Housing Cost
TXRE	Received real estate property tax rebate	Housing Cost
VALUE	Current market value of unit	Housing Cost
VARM	1st mortgage changes for other reason	Housing Cost
VARM2	2nd mortgage changes for other reason	Housing Cost
VARY	1st mortgage payments change	Housing Cost
VARY2	2nd mortgage payments change	Housing Cost
YRMOR	Year 1st mortgage obtained	Housing Cost
YRMOR2	Year 2nd mortgage obtained	Housing Cost
ZSMHC	Monthly housing costs	Housing Cost
AGE	Age of person	Household Composition
APPLY	How got to live in public housing	Household Composition
CITSHIP	U.S. Citizenship	Household Composition
CUSHOM	How owner obtained unit	Household Composition
DLINE1	Line Number of respondent	Household Composition
FAMNUM	Family number	Household Composition
FAMREL	Family relationship	Household Composition
FAMTYP	Family type	Household Composition
FRSTHO	Ever owned home before	Household Composition
GRAD	Educational level of person	Household Composition
HERE	Nonrelative is present	Household Composition
HHAGE	Age of householder	Household Composition
HHCITSHIP	US Citizenship of householder	Household Composition
HHGRAD	Education level of householder	Household Composition
HHINUSYR	Year householder came to US	Household Composition
HHMAR	Marital status of householder	Household Composition
HHNATVTY	Country of birth of householder	Household Composition
HHPLINE	Line number of householder	Household Composition
HHRACE	Race of householder	Household Composition
HHREL	Relationship of householder to household	Household Composition
HHSEX	Sex of householder	Household Composition
HHSPAN	Spanish origin of householder	Household Composition
HHSPOS	Line number of spouse of householder	Household Composition

HHTEN	Householder is owner/renter of unit	Household Composition
HHWLINEQ	Householder worked at all last week	Household Composition
INUSYR	Year came to U.S.	Household Composition
LIVEAT	Everyone in household lives or eats together	Household Composition
LONGIT	Characteristics of household in 70/80/90	Household Composition
MAR	Marital status of person	Household Composition
NATVTY	Country of birth	Household Composition
NOSTEP	Entrance accessible w/o steps or stairs	Household Composition
NROWNR	Ownership shared w/ person not living here	Household Composition
NRPAYM	Person not living here help pay mortgage/util	Household Composition
PAR	Line number of parent of person	Household Composition
PER	Number of persons in household	Household Composition
PERSINT	Personal/telephone interview	Household Composition
PERSON	Line number of person	Household Composition
PERSON	Line number of person	Household Composition
PLINE	Line number of person	Household Composition
PREOCC	Received unit as gift or purchased it	Household Composition
QIDRI	(FAM)Interest/rental/royalty/estate income	Household Composition
QOTALM	(FAM)VA/unemploy/child support/alim/other	Household Composition
QRETIR	(FAM)Received retirement or survivor pension	Household Composition
QSELF	(FAM)Received self-employment income	Household Composition
QSSI	(FAM)Received supplemental security income	Household Composition
RACE	Race of person	Household Composition
REL	Relationship of person to reference person	Household Composition
REMP	Employed by household	Household Composition
RESPTYP	Type of respondent	Household Composition
SAMEHH	Same household members live in unit	Household Composition
SAMEHH2	Same household members live in unit (recode)	Household Composition
SCHNO	Nobody in household attends school	Household Composition
SCHOTH	Someone in household attends other type of school	Household Composition
SCHPRI	Someone in household attends private school	Household Composition
SCHPUB	Someone in household attends public school	Household Composition
SEX	Sex of person	Household Composition
SNITEV	Number of nights owner spends at vacant/URE unit	Household Composition
SPAN	Spanish origin of person	Household Composition
SPOS	Line number of spouse of person	Household Composition
STATUS	Interview status	Household Composition
STATUS	Interview status	Household Composition
TEN	This person is owner/renter of unit	Household Composition
WHDY	Number of days worked at home	Household Composition

WHHRB	# hours worked at home (self-employed)	Household Composition
WHHRW	# hours worked at home (wage & salary)	Household Composition
WHOME	Work at home for employer	Household Composition
WINUS	Place of work outside the U.S.	Household Composition
WLINEQ	Work at all last week	Household Composition
ZADULT	Number of adults 18+ in household	Household Composition
ZMVRP	Total Number of mover groups in the household	Household Composition
CROPSL	Receive farm income	Income
FOOD	Meals included in rent paid to household	Income
HHFOOD	Lodger contributes to household for food	Income
HHMORT	Lodger contributes to household for mortgage/rent	Income
HHOTH	Lodger contributes to household for other costs	Income
HHUTFU	Lodger contributes to household for utilities	Income
INV20K	Total savings/investments over \$25,000	Income
LODRNT	Amount lodger pays to household	Income
LODSTA	Lodger pays fixed amount to household	Income
LT25K	Income in last 12 months over \$25,000	Income
OTHEST	Anyone home who can estimate nonrelative income	Income
PQIDRI	Received interest, dividends, royalty income	Income
PQOTALM	Received VA/unemployment/child support/alimony/other income	Income
PQOTHNR	Other income received by nonrelative	Income
PQRETIR	Received retirement or survivor pension	Income
PQSAL	Wages/salary received by reference person/relative	Income
PQSALNR	Salary received by nonrelative	Income
PQSELF	Received self-employment income	Income
PQSELFNR	Received self-employment income by nonrelative	Income
PQSS	Received Social Security or Railroad Retirement pension	Income
PQSSI	Received Supplemental Security Income	Income
PQWELF	Received SSI, AFDC, other welfare	Income
PQWKCMP	Received SSDI, work. comp., vet. or other disability payments	Income

ROTHE	Received other assistance making ends meet	Income
RUTIL	Receive help with utility bills	Income
SAL	Wage & salary income of person	Income
SUBRNT	Government subsidizes rent for unit	Income
SUBRNT1	Government subsidizes rent for unit	Income
SUBRNT2	Government subsidizes rent for unit	Income
VCHER	Received voucher to help pay rent	Income
VOTHER	Total amount of other income	Income
VOTHER2		Income
ZINC	Family income	Income
ZINC2	Household Income	Income
ZINCH	This month's income same as 1 year ago	Income
ZINCN	Expected income in next 12 months	Income
ACCESSC	Entry system required to access community	Neighborhood
BADPER	People in neighborhood are bothersome	Neighborhood
BADPRP	Undesirable neighborhood/property bothersome	Neighborhood
BADSRV	Poor city/county services are bothersome	Neighborhood
COMMRECR	Community recreational facilities available	Neighborhood
COMMSERV	Community services provided	Neighborhood
CRIMEA	Neighborhood has neighborhood crime	Neighborhood
CRIMEB	Neighborhood crime bothersome	Neighborhood
CRIMEC	Crime so bad you want to move	Neighborhood
EABAN	Abandoned/vandalized buildings within 1/2 blk	Neighborhood
EAGE	Unit about same age as nearby units	Neighborhood
EAPTBL	Apartment buildings within 1/2 block of unit	Neighborhood

EBARCL	Buildings w/ bars on windows within 1/2 blk	Neighborhood
ECOM1	Business/institutions within 1/2 block	Neighborhood
ECOM2	Factories/other industry within 1/2 block	Neighborhood
EGREEN	Open spaces within 1/2 block of unit	Neighborhood
EHIGH	Apartment buildings 7+ stories tall within 1/2 blk	Neighborhood
EJUNK	Trash/junk in streets/properties in 1/2 blk	Neighborhood
ELOW1	Single-family town/rowhouses in 1/2 blk	Neighborhood
ELOW2	Apartment buildings <4 stories tall within 1/2 blk	Neighborhood
EMID	Apartment buildings 4-6 stories within 1/2 block	Neighborhood
EMOBIL	Mobile homes within 1/2 block of unit	Neighborhood
EPRKG	Parking lots within 1/2 block of unit	Neighborhood
EPRKGA	Nearby parking lots useable by anyone	Neighborhood
EPRKGR	Nearby parking lots for residents only	Neighborhood
EPRKGS	Nearby parking lots for shoppers/workers	Neighborhood
EROAD	Roads within 1/2 block need repairs	Neighborhood
ESFD	Single family homes within 1/2 block	Neighborhood
ETRANS	Railroad/airport/4-lane hwy within 1/2 block	Neighborhood
EWATER	Bodies of water within 1/2 block of unit	Neighborhood
GATED	Walls/fences surrounding community	Neighborhood
HOWN	Rating of neighborhood as place to live	Neighborhood
LITTER	Litter in neighborhood bothersome	Neighborhood
NEWTRN	Neighborhood Public transportation satisfactory	Neighborhood
NOISE	Noise in neighborhood is bothersome	Neighborhood
NOISN1	Hear neighbors through floor/walls/ceiling	Neighborhood
NOISN2	Loudness of neighbor's noise bothersome	Neighborhood
NOISN3	Timing of neighbor's noise bothersome	Neighborhood
NOPROB	Nothing bothersome in neighborhood	Neighborhood
NORC	Majority of neighbors 55+	Neighborhood
NPROBS	Anything bothersome in neighborhood	Neighborhood
ODORA	Neighborhood has bad smells	Neighborhood
ODORB	Neighborhood smells are bothersome	Neighborhood
ODORC	Smells are so bad you want to move	Neighborhood
OTHNHD	Other problems bothersome in neighborhood	Neighborhood
SATPOL	Neighborhood police protection satisfactory	Neighborhood
SCH	Neighborhood public Elementary school satisfactory	Neighborhood
SCHCLS	Neighborhood public Elementary school within 1 mile	Neighborhood
SCHM	Public Elementary school so bad you want to move	Neighborhood
SHARPF	Unit shares plumbing facilities	Neighborhood
SHP	Neighborhood shopping satisfactory	Neighborhood
SHPCLS	Neighborhood stores within 1 mile	Neighborhood

STRNA	Neighborhood has heavy street noise/traffic	Neighborhood
STRNB	Neighborhood street noise/traffic bothersome	Neighborhood
STRNC	St. noise/traffic so bad you want to move	Neighborhood
AFUEL	Type of fuel used for air conditioning	Utilities
AFUR	Forced air furnace as supplemental heating equipment	Utilities
AMTE	Average monthly cost of electricity	Utilities
AMTF	Annual cost of other fuels	Utilities
AMTG	Average monthly cost of gas	Utilities
AMTO	Annual cost of fuel oil	Utilities
BILLF	Type of billing for other fuels	Utilities
BILLFE	Other fuels billed with electricity	Utilities
BILLFG	Other fuels billed with gas	Utilities
BILLFO	Other fuels billed with fuel oil	Utilities
BILLFT	Other fuels billed with garbage/trash	Utilities
BILLFW	Other fuels billed with water/sewage	Utilities
BILLG	Type of billing for gas	Utilities
BILLGE	Gas billed with electricity	Utilities
BILLGF	Gas billed with fuel oil	Utilities
BILLGO	Gas billed with other fuels	Utilities
BILLGT	Gas billed with garbage/trash	Utilities
BILLGW	Gas billed with water/sewage	Utilities
BILLO	Type of billing for fuel oil	Utilities
BILLOE	Fuel oil billed with electricity	Utilities
BILLOF	Fuel oil billed with other fuels	Utilities
BILLOG	Fuel oil billed with gas	Utilities
BILLOT	Fuel oil billed with garbage/trash	Utilities
BILLOW	Fuel oil billed with water/sewage	Utilities
BILLT	Type of billing for garbage & trash	Utilities
BILLTE	Garbage/trash billed with electricity	Utilities
BILLTF	Garbage/trash billed with other fuels	Utilities
BILLTG	Garbage/trash billed with gas	Utilities
BILLTO	Garbage/trash billed with fuel oil	Utilities
BILLTW	Garbage/trash billed with water/sewage	Utilities
BILLW	Type of billing for water & sewage	Utilities
BILLWE	Water/sewage billed with electricity	Utilities
BILLWF	Water/sewage billed with other fuels	Utilities
BILLWG	Water/sewage billed with gas	Utilities
BILLWO	Water/sewage billed with fuel oil	Utilities
BILLWT	Water/sewage billed with garbage/trash	Utilities

BUYE	Pay for electricity separately	Utilities
BUYE2	Pay for electricity separately	Utilities
BUYF	Pay for other fuels separately	Utilities
BUYF2	Pay for other fuels separately	Utilities
BUYG	Pay for gas separately	Utilities
BUYG2	Pay for gas separately	Utilities
BUYO	Pay for fuel oil separately	Utilities
BUYO2	Pay for fuel oil separately	Utilities
CFUEL	Fuel used most for cooking	Utilities
COKST	Cook stove used as supplemental heating equipment	Utilities
DAFUR	Forced air furnace - DK if supplemental/parallel	Utilities
DCOKST	Cookstove - DK if supplemental/parallel heat equipment	Utilities
DEGREE	Average heating/cooling degree days	Utilities
DELECT	Built-in electric unit-DK if supplemental/parallel	Utilities
DFLOT	Vented room heater - DK if supplemental/parallel	Utilities
DFRPL	Fireplace w/out inserts-DK supplemental/parallel	Utilities
DFRPLI	Fireplace w/ inserts-DK if supplemental/parallel	Utilities
DFUEL	Fuel used by clothes dryer	Utilities
DHOTH	Other type of heat equipment-DK if supplemental/parallel	Utilities
DHPMP	Heat pump - DK is supplemental/parallel heat equipment	Utilities
DPLF	Pipeless furnace - DK if supplemental/parallel	Utilities
ELECT	Electrical units used as supplemental heat equipment	Utilities
FAFUR	Fuel used by forced warm-air furnace	Utilities
FCOKST	Fuel used by cookstove	Utilities
FELECT	Fuel used by built-in electric units	Utilities
FFLIN	Fuel used by unvented room heaters	Utilities
FFLOT	Fuel used by vented room heaters	Utilities
FFRPL	Fuel used by fireplace without inserts	Utilities
FFRPLI	Fuel used by fireplace with inserts	Utilities
FHOTH	Fuel used by other supplemental heating equipment	Utilities
FHPMP	Fuel used by electric heat pump	Utilities
FLIN	Heating equipment not vented to outside	Utilities
FPLF	Fuel used by built-in pipeless furnace	Utilities
FPORTH	Fuel used by portable electric heaters	Utilities
FSTEAM	Fuel used by steam/hot water system	Utilities
FSTOVE	Fuel used by woodburning/franklin stove	Utilities
GASPI2	Source of gas heat for vacant units	Utilities
GASPIP	Gas from underground pipes or bottles	Utilities
HEQUIP	Main heating equipment	Utilities
HFUEL	Fuel used most for heating unit	Utilities

HOTH	Other equipment used as supplemental heating equipment	Utilities
HPMP	Heat pump used as supplemental heating equipment	Utilities
NONE	No supplemental heating equipment	Utilities
OAFUEL	Fuel used by other central a/c unit	Utilities
PAFUR	Forced air furnace is parallel supplemental equipment	Utilities
PCOKST	Cookstove is parallel supplemental heating equipment	Utilities
PELECT	Built-in electric unit is parallel equipment	Utilities
PFLOT	Vented room heater is parallel supplemental equipment	Utilities
PFRPL	Fireplace without inserts is parallel equipment	Utilities
PFRPLI	Fireplace w/ inserts is parallel equipment	Utilities
PHOTH	Some other type is parallel supplemental equipment	Utilities
PHPMP	Heat pump is parallel supplemental equipment	Utilities
PLF	Pipeless furnace used as supplemental heating equipment	Utilities
PORTH	Portable heaters used as supplemental heating equipment	Utilities
PPLF	Pipeless furnace is parallel supplemental equipment	Utilities
PSTEAM	Steam/hot water system is parallel equipment	Utilities
PSTOVE	Woodburning stove is parallel supplemental equipment	Utilities
SAFUR	Forced air furnace is supplemental heating equipment	Utilities
SCOAL	Supplemental heating equipment uses coal/coke	Utilities
SCOKST	Cookstove is supplemental heating equipment	Utilities
SELECT	Built-in electric units are supplemental heat equipment	Utilities
SFLIN	Unvented room heaters are supplemental heat equipment	Utilities
SFLOT	Vented room heaters are supplemental heat equipment	Utilities
SFRPL	Fireplace without inserts is supplemental equipment	Utilities
SFRPLI	Fireplace w/ inserts is supplemental heat equipment	Utilities
SGAS	Supplemental heating equipment uses gas	Utilities
SHOTH	Some other type is supplemental heating equipment	Utilities
SHPMP	Heat pump is supplemental heating equipment	Utilities
SJUICE	Supplemental heating equipment uses electricity	Utilities
SKERO	Supplemental heating equipment uses kerosene	Utilities
SOIL	Supplemental heating equipment uses fuel oil	Utilities
SOTHER	Supplemental heating equipment uses other fuel	Utilities
SPLF	Pipeless furnace is supplemental heating equipment	Utilities
SPORTH	Portable heaters are supplemental heating equipment	Utilities
SSTEAM	Steam/hot water system is supplemental heat equipment	Utilities
SSTOVE	Woodburning stove is supplemental heating equipment	Utilities
SSUN	Supplemental heating equipment uses solar energy	Utilities
STOVE	Wood stove used as supplemental heating equipment	Utilities
SWOOD	Supplemental heating equipment uses wood	Utilities
USEGAS	Household uses gas	Utilities

WFUEL	Fuel used most to heat water	Utilities
ALMV	All movers lived in same previous residence	Recent Movers
HHMOVE	Year householder moved in	Recent Movers
HHMOVM	Month householder moved in	Recent Movers
HHMVG	Recent mover group of householder	Recent Movers
HUHIS	What happened to the old unit	Recent Movers
LISCH	Any changes to apartment in last 2 years	Recent Movers
MOVE	Year person moved in	Recent Movers
MOVGRP	Recent mover group	Recent Movers
MOVMM	Month person moved in	Recent Movers
MVCNT1	Number of people in mover group #1	Recent Movers
MVCNT2	Number of people in mover group #2	Recent Movers
MVCNT3	Number of people in mover group #3	Recent Movers
MVG	Recent mover group	Recent Movers
NLBSY	Stopped looking at homes - too busy	Recent Movers
NLHPPY	Stopped looking - happy with this unit	Recent Movers
NLMOBL	Stopped looking - had trouble traveling	Recent Movers
NLMOV	Stopped looking - had to move quickly	Recent Movers
NLNLIK	Stopped looking - don't like looking	Recent Movers
NLNPR	Stopped looking for no particular reason	Recent Movers
NLOTHR	Stopped looking for some other reason	Recent Movers
NLUNK	Stopped looking - didn't know of others	Recent Movers
NUMHS	# homes looked at before choosing this one	Recent Movers
PMOVM	Month of previous move before this one	Recent Movers
PMOYR	Year of previous move before this one	Recent Movers
RMOV	Mover group number	Recent Movers
TLRMOV	Number of people moved into unit in last 2 years	Recent Movers
WHAVL	Liked unit because only one available	Recent Movers
WHDSN	Liked unit because of room layout/design	Recent Movers
WHEXT	Liked unit because of exterior appearance	Recent Movers
WHFIN	Liked unit for financial reasons	Recent Movers
WHKIT	Liked unit because of kitchen	Recent Movers
WHOTH	Liked unit for other reasons	Recent Movers
WHQUL	Liked unit because of construction quality	Recent Movers
WHSIZ	Liked unit because of size	Recent Movers
WHYMOVE	Main reason moved	Recent Movers
WHYRD	Liked unit because of yard/trees/view	Recent Movers
WHYTOH	Main reason this unit was chosen	Recent Movers
WHYTON	Main reason this neighborhood was chosen	Recent Movers

WMCHEP	Moved here for less expensive rent/maintenance	Recent Movers
WMCHTN	Moved here to own not rent or vice versa	Recent Movers
WMCLOS	Moved to be closer to work/school/other	Recent Movers
WMCNDO	Moved because unit was going condo/co-op	Recent Movers
WMDISL	Moved because of disaster loss	Recent Movers
WMFAML	Moved for other family/personal reasons	Recent Movers
WMFEMP	Moved for other financial/employment reasons	Recent Movers
WMGOVP	Moved because government using land/unit	Recent Movers
WMGOVT	Force to move by government	Recent Movers
WMHOUS	Moved for other housing related reasons	Recent Movers
WMJOBS	Moved for new job or job transfer	Recent Movers
WMLARG	Moved because needed larger unit	Recent Movers
WMMARR	Moved because of marital status change	Recent Movers
WMNFIT	Moved because unit was condemned	Recent Movers
WMONHH	Moved to establish own household	Recent Movers
WMOTHR	Moved for some other reason	Recent Movers
WMOWNR	Moved because owner taking over unit	Recent Movers
WMPRIV	Moved cause private company/person wants unit	Recent Movers
WMQUAL	Moved to obtain higher quality unit	Recent Movers
WMREPR	Moved because unit closed for repairs	Recent Movers
WNFUN	Chose neighborhood for close leisure activity	Recent Movers
WNHOME	Chose neighborhood because of unit	Recent Movers
WNJOB	Chose neighborhood because close to work	Recent Movers
WNLOOK	Chose neighborhood for its looks/design	Recent Movers
WNOTHR	Chose neighborhood for other reasons	Recent Movers
WNPEPL	Chose neighborhood since close to friends/family	Recent Movers
WNSCH	Chose neighborhood because of good schools	Recent Movers
WNSRV	Chose neighborhood for other public services	Recent Movers
WNTRAN	Chose neighborhood since close to Public trans.	Recent Movers
XCOND	Previous residence was condo/co-op	Recent Movers
XCOOP	Previous residence was a cooperative	Recent Movers
XCOST	Current housing costs same as old unit	Recent Movers
XHEAD	Previous unit owned/rented by one who moved here	Recent Movers
XHRATE	Current unit better/worse than old unit	Recent Movers
XINUS	Previous residence outside United States	Recent Movers
XNRATE	Current neighborhood better/worse than old one	Recent Movers
XPER	# people living in last unit before move	Recent Movers
XREL	Previous unit owner/rented by relative	Recent Movers
XTEN	Tenure of previous residence	Recent Movers
XUNIT	Type of unit of previous residence	Recent Movers

AMPM	Time usually leave for work - am or pm	Commuting
CARS	Number of cars kept for use by household members	Commuting
DISTJ	Number of miles traveled to work	Commuting
HJOB	Reports to work at same place each day	Commuting
PASS	Number of passengers in carpool	Commuting
TIMEJ	Length of trip to work	Commuting
TRAN	Method of transportation to work	Commuting
TRN	Is the public transportation satisfactory?	Commuting
TRUCKS	Number of vans or trucks for household use	Commuting
USETRN	Someone in household uses Public transportation	Commuting
VEHCL	Drive to work alone or with others	Commuting
WTIME	Time usually leave for work	Commuting
ANCHOR	Method used to anchor mobile home	Mobile Homes
CAMF	Frequency of assoc/mobile home park fee	Mobile Homes
CAMFQ	Frequency of assoc/mobile home park fee	Mobile Homes
FRSIT	First site mobile home ever placed on	Mobile Homes
IFOTHF	Other mobile home fees required	Mobile Homes
MH41	Model year of 1st mobile home used for living quarters	Mobile Homes
MH42	Model year of 2nd mobile home used for living quarters	Mobile Homes
MH43	Model year of 3rd mobile home used for living quarters	Mobile Homes
MH44	Model year of 4th mobile home used for living quarters	Mobile Homes
MH45	Model year of 5th mobile home used for living quarters	Mobile Homes
MHGONE	Old mobile home gone	Mobile Homes
MHSETQ	Type of mobile home foundation	Mobile Homes
MHSTAY	Mobile home to stay or be moved	Mobile Homes
TPARK	Number of mobile homes in group	Mobile Homes
BEAF78	Unit built before/after 1978	Lead Based Paint
BIGP	Area of peeling paint larger than 8 x 11	Lead Based Paint
BIGPEL	Peeling paint outside larger than door	Lead Based Paint
EVRTES	Unit ever tested for lead paint	Lead Based Paint
LDMAYB	Seller/agent said lead paint possible	Lead Based Paint
LDTEST	Unit tested for lead paint	Lead Based Paint
MUSTEL	Knew you must be told about lead paint	Lead Based Paint
OUTPEL	Outside paint peeling or flaking	Lead Based Paint
OUTPNT	Any part of outside of unit painted	Lead Based Paint
PAPHLT	Received pamphlet about lead paint	Lead Based Paint
PEELAM	Number of other rooms with peeling paint	Lead Based Paint

PEELSZ	Size of area of peeling/flaking paint	Lead Based Paint
SMPEEL	Peeling paint more/less than 1/2 door	Lead Based Paint
SNDPNT	Old paint sanded or scraped	Lead Based Paint
TPBPAI	Unit tested for lead paint before purchase	Lead Based Paint
TPBPIP	Lead pipes inspected before purchase	Lead Based Paint
TPBSOL	Lead solder inspected before purchase	Lead Based Paint
APTAD	Space added to apartment	Upgrade and Remodeling
APTCH	Type of change to apartment	Upgrade and Remodeling
APTCM	Apartment combined with other apartment	Upgrade and Remodeling
APTSP	Apartment split into several apartments	Upgrade and Remodeling
CABNX	Number of cabinets replaced/repared	Upgrade and Remodeling
CABREP	Replaced/repared any cabinets in unit	Upgrade and Remodeling
DOORX	Number of doors replaced/repared	Upgrade and Remodeling
RAC	Cost of replacements/additions to unit	Upgrade and Remodeling
RACOST		Upgrade and Remodeling
RAD	Cost of alteration/repair	Upgrade and Remodeling
RAH	Household member performed alteration/repair	Upgrade and Remodeling
RAN	Number of replacements/additions made to unit	Upgrade and Remodeling
RAS	Type of alteration/repair - 1999 version	Upgrade and Remodeling
RAW	Alteration/repair is addition/replacement	Upgrade and Remodeling
RAY	Year alteration/repair completed	Upgrade and Remodeling
SUBFIX	Household got government loan/grant for alterations	Upgrade and Remodeling
USFCAM	Amount of square foot change in unit	Upgrade and Remodeling
USFCHG	Change in square footage of unit	Upgrade and Remodeling
WALLX	# inside walls/ceilings repaired/replaced	Upgrade and Remodeling
WALREP	Inside walls/ceilings repaired/replaced	Upgrade and Remodeling
WINREP	Windows repaired or replaced	Upgrade and Remodeling
WINX	Number of windows repaired or replaced	Upgrade and Remodeling

Sample status, weights, interview status

This section documents key variables used in sampling and interviewing in the survey. CONTROL contains the basic case identification number. WEIGHT is the adjusted weight assigned to each case in the sample. Pure weight (PWT) is also provided. The remaining variables provide information on the status of the unit, on various aspects of the interview, on vacant units and non-interviews. These variables include the reasons for vacancy and non-interviews and some descriptions for units, which have been temporarily or definitely removed from the housing stock. A few concepts related to weights, vacancy, merger and conversions are discussed below. Finally, this section deals with the treatment of non-interviews and missing data in the AHS.

Notes:

Merging files

The most important variable for merging is the CONTROL variable. The CONTROL variable in each file contains the 12-digit control code for each housing unit. These codes are unique to each housing unit in the national survey data.

However, for the metropolitan survey data, these codes are only unique to a housing unit within an SMSA. For SAS users, the file-flattening program that can be downloaded with the data uses SMSA CONTROL in the file merging procedures. Users of other statistical programs must use both variables to identify a particular housing unit when writing their own programs to merge files from the metropolitan sample.

New Weight

In December 2002, HUD and Census released a new 2001 dataset in order to add a variable, WGT90GEO. The new variable is an *alternative* weight for AHS national records, but is not available for the metro data. This new weight is adjusted for 1990 metropolitan geography, as opposed to the standard weight, which is based on 1980 geography. This new weight is provided to allow matching to the printed reports. Both weights sum to national control totals for total units for 2001. Totals for all units will match when computed with both sets of weights, although occupied unit totals and any breakdown do not match. Additional information on how to use the new weight is described in the beginning of the chapter on Sample status, weights, interview status.

HUD and Census recommend that WGT90GEO, the 1990 geography-based weight, be used only to match numbers from the public use file (PUF) with numbers in the publication at the US and Census region level. For historical comparisons and other analyses, use the 1980 geography-based weights (WEIGHT), as these are comparable to previous publications.

For more details about how weights are computed, see Appendix B of the 2001 AHS National Survey. Also, Table V in Appendix C of that publication compares some key tabulations using the two sets of weights.

Types and Treatment of Missing Data

There are three sources of missing data in the American Housing Survey Database: non-interviewed units, unanswered questions that did not apply to the unit, and unanswered questions that did apply to the unit.

Non-interviewed Units: Units which have missing data because no interview was conducted are identified by the variable ISTATUS (same as STATUS). Interviews do not take place for a variety of reasons, e.g., the unit could not be located by the interviewer, the household could not be reached or refused the interview, or the unit did not qualify as an eligible housing unit. In addition, units which were not part of the original cohort are assigned missing data in the longitudinal file for years before their first interview.

There are three types of Non-interviews:

Type A: The unit is occupied by people eligible for the interview. An interview was attempted but could not be obtained (e.g., no one home, respondent refusal, sample unit cannot be reached because of impassable roads, language problems).

Type B: The unit is not eligible for an interview at present but could become eligible for an interview in the future (e.g., unit currently is for nonresidential use, unoccupied site for mobile home, unit under construction; unit severely damaged by fire, unit is permanent or temporary business or commercial storage, converted to institutional use). Note that vacant units and units occupied entirely by people with URE are not considered non-interviews. Type B non-interviews will be revisited each survey year, and if they become housing units again, they will be interviewed.

Type C: The unit is not eligible for the sample, because it no longer exists or because of sampling, reasons (e.g., unit demolished, disaster loss, house or mobile home moved, unused permit abandoned, merged - not in current sample).

Zero Weighted Units: Users should note that, in addition to non-interview units which have a weight of zero, there are other cases which have data present on the files and have been assigned a weight of zero (see the variable WEIGHT in this section). These zero weighted units are:

Units in the neighborhood sample. Each cluster of neighborhoods should be weighted equally with other clusters, to calculate the percent of clusters having a particular trait.

Units accidentally interviewed which should not be in the sample. Use of data from these units would cause misrepresentation in the estimates.

Vacant and URE units which are tents, boats, or are located in transient hotels, which are not considered housing units.

Vacancy Status: A housing unit is vacant if no one is living in it at the time of the interview, unless its occupants are only temporarily absent. In addition, housing units where all the occupants have a usual residence elsewhere are grouped with vacant units. Vacant housing units are classified as either “seasonal” and “migratory” or “year-round.”

“Seasonal” Units are intended for occupancy during only certain seasons of the year. Included are units intended for recreational use, such as beach cottages and hunting cabins, and vacant units held for herders and loggers.

“Migratory” units are vacant units held for occupancy by migratory labor employed in farm work during the crop season.

“Year-round” units: Vacant housing units are available or intended for occupancy at any time of the year. A unit in a resort area which is usually occupied on a year round basis is considered year-round. A unit used only occasionally throughout the year is also considered year-round.

For “year-round” units, vacancy status is categorized in groups such as:

For rent – Owners of some units offer them for rent. Other owners solicit offers either for rent or for sale. When separate categories for these are not shown, they are both included in for rent, as in the rental vacancy rate.

For sale only – Units “for sale only” are offered for sale, and the owner does not solicit renter-occupants, even though the owner might eventually rent the unit.

Rented or sold – If any money rent has been paid or agreed upon, but the new renter has not moved in as of the date of the interview, or if the unit has recently been sold, but the new owner has not yet moved in, the unit is classified as rented or sold.

Occasional use – These are units held for weekend or other occasional use throughout the year. Second homes may be classified here or as seasonal.

Other vacant – If a vacant year-round unit does not fall into any of the classifications specified in the distribution, it is classified as “other vacant.” For example, this category includes units held for settlement of an estate, units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

URE: These are temporarily occupied by persons with Usual Residence Elsewhere. If all people in a housing unit usually live elsewhere, the unit is classified as vacant. For example, a beach cottage occupied at the time of the interview by a family that has a usual residence in the city is included in the count of vacant units. Their home in the city or the home of a comparable vacationing family also can be in the AHS sample and would be reported as occupied since the occupants are only temporarily absent. URE units also may be classified in any of the vacancy categories: seasonal or for sale.

Units Changed by Merger: A merger is the result of combining two or more housing units into fewer units through structural alteration or change in use. Structural alteration includes such changes as the removal of partitions or dismantling of kitchen facilities. Change in use may result from a simple rearrangement of space without structural alteration, such as unlocking a door which formerly separated two housing units. A change in use also occurs, for example, when a family occupies both floors of a house which formerly contained a separate housing unit on each floor.

Conversion to More Units: Conversions to more units take place when one or more apartments or houses are subdivided to build more or smaller apartments. All units resulting from the conversion become part of the sample if they meet the housing unit definition and are not sample units in another Census Survey.

Non-interviewed units are assigned a weight of zero. Eligible units which were not interviewed are compensated for by an increase in the weights of other nearby units. Thus, the totals are accurate, but there is an implicit assumption that the non-responding units are few, about 5 percent, so the correction is small. The specific units involved change slightly each year, causing the weights of almost all other units to change slightly as well.

BBLDG =

Type B noninterview building

1	Building contains at least one housing unit-either occupied or vacant.
2	Unit being classified as Type B is the only unit in the building.
3	All units would qualify for a Type B or C noninterview.
B	Not applicable
Blank	Not reported

Status of unit

- 1 Returning sample unit from a previous enumeration
- 8 Added unit within current sample unit/property

Long description:

This recode indicates whether this unit had been in sample in a previous survey year or added unit within current sample unit/property. A unit has a value of '8', when it is a new unit found to exist:

within a returning sample unit (a house splits so the basement is rented as an apartment) or,
 within the property containing a returning sample unit (someone moves a mobile home to the same property as an original sample unit, the mobile home is a separate housing unit but uses the same address)

Otherwise, the unit is given the value of '1'

Notes:

This variable should be used to analyze the 2001 national data when trying to match to the published reports and geographic analysis.
Please see the narrative about weights for a brief discussion.

Geography

The national survey identifies the four Census regions (REGION). It also identifies the metropolitan areas over 100,000 in population (SMSA), shows which units are located within the central city of an SMSA (METRO3), and classifies climate severity to help analyze utility costs (DEGREE, in Utilities section).

The metropolitan survey's geographic variables are STATE, COUNTY, SMSA, and ZONE.

Every four years, the national survey includes a Metro supplement—additional survey data for the six largest metropolitan areas: Chicago, Detroit, Los Angeles, New York, Northern New Jersey, and Philadelphia. 1995, 1999, and 2003 are the years this supplement was included, and a note for the SMSA variable specifies exactly which areas were covered.

Notes:

Metro Area Identification: In the 1997 survey, the variable METRO was replaced with METRO3 because the census was unable to convert 1990-based urbanized areas to 1980-based geography used by the AHS. The new coding has fewer distinctions than the older one, making it more difficult to identify metropolitan area status. Pre-1997 data cannot be compared completely with later figures.

County: County codes are only available in the metropolitan files. The primary divisions of most states are termed counties. Exceptions are as follows:

Louisiana uses the term “parish” rather than “county.”

Alaska has county equivalents defined by the state.

Maryland, Missouri, Nevada, and Virginia contain one or more cities that are independent of any county. For statistical purposes, these independent cities are treated as county equivalents.

1980 Design SMSA Code: The SMSA codes are used to uniquely identify each MSA. When using the metropolitan data, the SMSA variable also must be used in conjunction with the CONTROL variable to merge files from the AHS metropolitan surveys because the CONTROL codes are only unique to housing units within each SMSA.

Zone: Zone codes are only available in the metropolitan files. A zone is defined for the AHS only as a socio-economically homogeneous area of more than 100,000 people. It does not necessarily correspond to a geographic subdivision, although in almost all cases each identified zone is equivalent to a group of Census tracts. A zone may follow the boundaries of a county or cover a portion of a county. It may also cover several counties or townships or portion of several counties. The areas in a zone are not always adjacent. The limited sample size in each zone precludes reliable analysis of any single zone.

Notes:

9999 code not present in MSA files. Codes 9991-9993 are used for a few cases in 1995N and 1999N, where rare combinations of SMSA and METRO prevent us showing exact metro codes. See <http://www.census.gov/hhes/www/housing/ahs/metrodates.html> for a list of which metropolitan areas are included in each metropolitan survey.

As a supplement to the national survey, the 1995, 1999, and 2003 National data include extra cases to allow separate analyses of 6 areas:

Chicago (0620, 1600, 3965, 9991), Detroit (2160), Los Angeles (4480), New York (5380, 5600, 9992), Northern New Jersey (0875, 3640, 5015, 5190, 5640, 8480, 9993), and Philadelphia (6160).

All cases within these 18 MSA codes are covered, except Joliet City outside Chicago, and non-urbanized

ZONE =
Defined area of > 100,000 population

001:099 Zones inside the central city of an MSA
101:199 Zones in the suburbs of an MSA
201:299 Hybrid zones - contain cases in both the central city and the suburbs of an MSA

Long description:
A zone is defined as a socio-economically homogeneous area of greater than 100,000 population. It does not necessarily correspond to a geographic subdivision although in almost all cases each identified zone is equivalent to a group of Census tracts. A zone may follow the boundaries of a county or cover a portion of a county. It may also cover several counties or townships or portions of several counties. The areas in a zone are not always adjacent. Note that these zones are not intended for use in separate analyses, but rather as analytic building blocks, because the limited sample size in each zone will preclude reliable results for any single area.

Unit

This chapter provides information on unit characteristics, facilities and major equipment. Data in this section include unit size, number of rooms, bedrooms, bathrooms and other rooms in the unit, the number of people per room, and information on additions and major alterations undertaken in the last two years. In addition, there is information on energy conservation features, such as storm windows and insulation, and on recent installations of major equipment. For data on fuels used to operate equipment discussed in this section and on utility costs; refer to the Utilities section. In general, the variables are available for all units in the sample.

Notes:

Unit Size: Includes basements and finished attics. Excludes unfinished attics, carports, attached garages, and porches that are not protected from the elements. The information is obtained from the respondent and by exterior measurements if the respondent authorizes the interviewer to do so. Interviewers are given very specific instructions on how to elicit the information from the respondent and on how to measure the unit from the outside. If the respondent does not know the total square footage of the unit, the interviewer elicits information on a floor or room basis, records the length and width for each floor and provides sketches of the units. This information is reviewed by Census and used to calculate the square footage of the unit.

Lot Size: Respondents are asked for the size of the lot. Respondents can state the dimensions or the square footage of the lot or report its size in whole acres. If the respondent provides a range, the value of the mid-point of the range is noted in the data files. If a lot is divided by a road, the portion on the other side of the road is only included in the lot size if it is on the same deed as the lot on which the sample unit is located. For rental units, the acreage includes only the land included in the rent, not the acreage of the entire property belonging to the owner.

Rooms: Starting in 1999, the collection of room counts by floors was eliminated. 1997 was the only year where room counts by floor was conducted. Room counts of each type were collected for the housing units as a whole. Also, a probe was modified to ensure that one-room units were not under-reported. These changes resulted in higher estimates of one-room units and units with no bedrooms.

Rooms counted are whole rooms used for living purposes, such as living rooms, dining rooms, bedrooms, kitchens, finished attic or basement rooms, recreation rooms, permanently enclosed basement rooms, permanently enclosed porches that are suitable for year-round use, lodgers' rooms, and rooms used for offices by a person living in the unit.

A partially divided room, such as a dinette next to a kitchen or living room, is a separate room only if there is a partition from floor to ceiling, but not if the partition consists only of shelves or cabinets. A dining area in an L-shaped living room is not recorded as a dining room and not counted as a room.

Excluded from the count of rooms are bathrooms, halls, foyers or vestibules, balconies, closets, alcoves, pantries, strip or pullman kitchens, laundry or furnace rooms, unfinished attics or basements, other unfinished space used for storage, open porches, trailers used only as bedrooms, and offices used only by people not living in the unit.

If a room is used by occupants of more than one unit, the room is included with the unit from which it is most easily reached.

Bedrooms: The number of bedrooms in a housing unit is the count of rooms used mainly for sleeping, even if also used for other purposes. Rooms reserved for sleeping, such as guest rooms, even though used infrequently, are counted as bedrooms. Rooms used mainly for other purposes, even though used also for sleeping, such as a living room with a hideaway bed, or an extra bedroom used for storage, are not considered bedrooms. A housing unit consisting of only one room, such as a one-room efficiency apartment, is classified by definition as having no bedroom.

Bathrooms: A unit has a full bathroom if it has a room with a flush toilet, bathtub or shower, a sink, and hot and cold piped water in the structure for the exclusive use of the occupants of the unit. A half bathroom has either a flush toilet or a bathtub or shower for exclusive use, but does not have all the facilities for a complete bathroom.

Porch, Balcony, Deck: A porch, deck, or balcony must be attached to the unit, not only to the building. It can be open or enclosed. It must measure at least 4 by 4 feet. An enclosed porch used for year-round living and reported as a room is not reported as a porch to avoid double counting.

Telephone Available: Access to a telephone is described by one of two variables. The variable TELHH is used if a telephone is located in the household. The variable TELAV is used if there is a telephone elsewhere on which householders can be contacted.

Complete Kitchen Facilities: A unit has complete kitchen facilities if it has all three of the following for the exclusive use of the occupants of the unit: (1) an installed sink with piped water, (2) a mechanical refrigerator, and (3) built-in burners, not portable. All kitchen facilities must be located in the structure. They need not be in the same room. Quarters with only portable cooking equipment are not considered as having a range or stove. An icebox is not included as a mechanical refrigerator.

The kitchen facilities are for the exclusive use of the occupants when they are used only by the occupants of one housing unit, including lodgers or other unrelated people living in the unit. When a structure consists of only one housing unit, all equipment located inside the structure is classified, by definition, for exclusive use.

For vacant units from which one or all of the kitchen facilities have been removed, the kitchen facilities used by the last occupant are to be reported.

Complete Plumbing Facilities: A unit has "complete plumbing facilities" if it has hot and cold piped water inside the unit, a flush toilet, and a bathtub or shower inside the structure for the exclusive use of the occupants of the housing unit. All plumbing facilities must be located in the

unit but they need not be in the same room. Note that plumbing facilities are considered complete if they are located in the structure in which the unit located, while in the Census, facilities are complete only if they are inside the specific housing unit. Plumbing facilities are shared if they are also for the use of the occupants of other housing units.

Source of Water or Water Supply: “A public system or private company” refers to a common source supplying running water to six or more housing units. The water may be supplied by a city, county, water district, or private water company, or it may be obtained from a well which supplies six or more housing units. If a well provides water for five or fewer housing units, it is classified as an “individual well”. Water sources such as springs, creeks, rivers, cisterns, ponds, or lakes are in the “other” category.

Sewage Disposal: A “public sewer” is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system. It may be operated by a government body or private organization. A “septic tank or cesspool” is an underground tank or pit used for disposal of sewage which serves five or fewer units. Small sewage treatment plants, which in some localities are called neighborhood septic tanks, are classified as public sewers.

Air Conditioning: Air conditioning is defined as the cooling of air by a refrigeration unit. This definition excludes evaporative coolers, fans, or blowers that are not connected to a refrigeration unit. A “room unit” is an individual air conditioner which is installed in a window or an outside wall and is generally intended to cool one room. A “central system” is a central installation which air-conditions the entire housing unit. In an apartment building, a central system may cool all apartments in the building, each apartment may have its own central system, or there may be several systems that provide central air conditioning for a group of apartments. A central installation with individual room controls is a central air-conditioning system.

Heating Equipment: “Warm-air furnace” refers to a central system that provides warm air through ducts leading to various rooms. An “electric heat pump” refers to an electric all-in-one heating-cooling system, which uses indoor and outdoor coils, a refrigerator, and a compressor to provide heating in the winter and cooling in the summer. Only heat pumps that are centrally installed with ducts to the rooms are in this category. “Steam or hot water” refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. “Built-in electric units” are permanently installed in floors, walls, ceilings, or baseboards. A “floor, wall, or other pipeless furnace or built-in hot air heater without ducts” delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed.

“Room heaters with flue” include circulating heaters, convectors, radiant gas heaters and other nonportable heaters that burn gas, oil, kerosene, or other liquid fuels, and connect to a flue, vent, or chimney to remove smoke and fumes. “Room heaters without flue” include any room heaters that burn gas, oil, or kerosene and do not connect to a flue, vent, or chimney. Fireplaces, stoves and electric portable heaters are reported separately. According to the interviewer instructions, portable heaters burning liquid fuel should be included under “fireplaces, etc.”, not under “room heaters without flue”, but the questionnaire does not mention the portability distinction, so some portable room heaters may be classified “room heaters”, while others are classified “fireplaces, etc.”

For vacant units from which the heating equipment had been removed, the equipment used by the last occupants is to be reported.

Microwave Oven: The variable OVEN is used when a microwave oven is present. Prior to 1997, the variable was used when a conventional or microwave was present. The questionnaire was changed because it was believed that it was more relevant to ask about a microwave. Due to the question change, data under this variable prior to 1997 cannot be compared to more recent data.

Year Householder Moved Into Unit: In 1999, a change was made in the way these data were processed. The change allows the year the householder moved into a mobile home to be earlier than the year the structure was built. The change was made in order to accommodate mobile home householders who purchased a new mobile home but were still living in the same site, making the year their structure was built later than the year they moved in.

Rooms Used For Business: In order to differentiate rooms used exclusively for business from rooms used for business and personal use, the variable OFFICE was split into the variables EXCLUS, for rooms used only for business purposes, and BUSPER, identifying rooms used for business and personal use. An error in the 1997 questionnaire omitted BUSPER, so it is not possible to tell if rooms have mixed usage in that year.

- 7 : [Occupied interview] AND [Unit was built during or after 1980 and BUILT le (&SURVYEAR + 1)] ; OR
- 8 : [NOT occupied interview]

BUILT =

Year unit was built

2000:2005	2000-2005
1995	1995-1999
1990	1990-1994
1985	1985-1989
1980	1980-1984
1975	1975-1979
1970	1970-1974
1960	1960-1969
1950	1950-1959
1940	1940-1949
1930	1930-1939
1920	1920-1929
1919	1919 or earlier
B	Not applicable

Long description:

Year this housing unit was built.

(If respondent replies DK or is uncertain, probe: Do you know what decade, such as the 90's, 80's, 70's or some other decade?)

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	JBUILT
<i>Allocation Matrix:</i>	Matrix E
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld
<i>Module 2001 and later:</i>	newhouse
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Conditions not in universe:

1 : [(NOT occupied interview or URE interview or vacant interview)]

BURNER =

Unit has working built-in cooking burners

1	Yes
2	No
B	Not applicable

Long description:

Does this housing unit, have any built-in cooking burners that are in working order?

<i>Type:</i>	Character
<i>Edit flag variable:</i>	JURNER
<i>Allocation Matrix:</i>	Matrix E
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld

Conditions not in universe:

1 : [(Occupied interview or URE interview or vacant interview)] AND [Unit have working cook stove and/or range oven] ; OR

2 : [(NOT occupied interview or URE interview or vacant interview)]

BUSIN =

Number of offices/business rooms in unit

0:5 0-5 Offices/Business rooms

Long description:

Recoded sum of BUSIN1 through BUSIN5

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	JBUSIN
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1997N, 1998MSA

BUSPER =

rooms used for business/personal use

0	None
1:10	1-10
B	Not applicable
D	Don't Know
R	Refused

Long description:

How many rooms, if any, are used both as business space and for personal use?

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	JUSPER
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld
<i>Module 2001 and later:</i>	newhouse
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Conditions not in universe:

- 1 : [(URE interview or vacant interview)] ; OR
- 2 : [(NOT occupied interview or URE interview or vacant interview)]

CELLAR =

Unit has a basement

- 1 With a basement under all of the house
- 2 With a basement under part of the house
- 3 With a crawl space
- 4 On a concrete slab
- 5 In some other way (SPECIFY)
- B Not applicable

Long description:

Is this house built-

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	JELLAR
<i>Allocation Matrix:</i>	Matrix E
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld
<i>Module 2001 and later:</i>	newhouse
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Conditions not in universe:

- 1 : [(Occupied interview or URE interview or vacant interview)] AND [(Apartment building or mobile home)] ; OR
- 2 : [(NOT occupied interview or URE interview or vacant interview)]

CLIMB =

Number of floors from main entrance to apartment

0	Same floor
1:20	1-20
21	21 or more
B	Not applicable

Long description:

How many stories are there from the main entrance of the building to the main entrance of this apartment?

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	JCLIMB
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	Yes

- 6 : [Noninterview] AND [(NOT occupied interview or URE interview or vacant interview)]

Unit Quality

Data in this section include a measure of overall quality of the unit, residents' satisfaction with the unit, deficiencies outside and inside the unit (e.g. leaks, holes, cracks, blown fuses, equipment breakdowns) and in the common halls (such as non-working light fixtures or loose railings) and maintenance and repairs information.

Notes:

Housing adequacy: This three-scale index, in which one is adequate and three is severely inadequate, is a summary measure of housing quality. The criteria used to create this index is provided in the long description for the variable.

Common stairways: Data for common stairways are collected for housing units in structures of two or more units with common stairways. The data reflect the physical condition of the stairway, i.e., whether there are loose, broken or missing steps or stair railings. Common stairways are stairways, which are usually used by the occupants or guests to get to the door of the unit. They may be inside or outside of the building. The condition of stairways is reported for all units.

Peeling paint: Peeling paint must be on the inside walls or ceilings, and at least one area of the peeling paint must be larger than 8 inches by 11 inches.

Signs of basement water leakage: Signs of basement water leakage are recorded. Water leakage is present if the basement shows signs of water having leaked in from the outside, even if the signs only appear when it rains or during other similar situations. "No water leakage" means that the basement shows no sign of water leakage, or that the signs of water leakage are caused by a problem inside the structure such as faulty plumbing. If the basement shows signs of water having leaked in from the outside but the problem causing the leakage has been corrected, the unit was classified as having no basement leakage. This item is available if the respondent reported a water leakage in the last 12 months.

Leaking roof: Units with "water leakage" are those in which the roof shows signs of water having leaked in from the outside or where the roof leaks when it rains. "No water leakage" means that the roof shows no signs of water having leaked in from the outside, or that the roof shows signs of water leakage but the problem causing the leakage has been corrected. If the signs of water leakage are caused by a problem inside the structure such as faulty plumbing the unit is classified as having no basement leakage. This item is available if the respondent reported that water did leak from the outside in the last 12 months.

Other leakages: Data are available on water leakages through the walls and around the windows as well as leakages caused by faulty water pipes, plumbing backups or other causes. Leakages through broken or deteriorated windows are counted, while water leakages which came in through an open window are excluded. Leakages are reported if they occurred in the last 12 months.

Inside walls and ceilings: Data are collected on whether there are open cracks or holes and broken plaster or peeling paint on the inside walls or ceilings of a housing unit. Included are cracks or holes that do not go all the way through to the next room or to the outdoors. Hairline cracks or cracks that appear in the walls or ceilings but are not large enough for a fingernail file to be inserted, and very small holes caused by nails or other similar objects are not considered to be open cracks or holes.

Inside floors: Data are collected on whether there are holes in the inside floors of a housing unit. The holes do not have to go through the floor. Excluded are very small holes caused by nails or other similar objects.

Flush toilet, water supply, public sewage disposal and heating equipment breakdown: Plumbing breakdowns are reported if they lasted six or more consecutive hours, whether the problem was created by faulty equipment or by an interruption of the water supply. Heating equipment breakdowns, however, are not counted if they resulted from an interruption of the power supply or lack of fuel. The number of plumbing breakdowns refers to the three months before the interview unless the respondent has been in the unit for less than three months. Data on breakdowns or failure of flush toilets, water supply, sewage disposal and heating equipment were collected only if the housing unit had been occupied by the reference person of the household at least three months before the interview. The data are collected for all units and the questions are reworded as “Since you have lived here.” For breakdowns or failures of heating equipment, data are collected only if the unit had been occupied by the reference person during the winter before the interview. To qualify as having lived here “last winter”, the reference person must have moved into the unit before the previous February.

Electric wiring: A housing unit is classified as having exposed electric wiring if the unit has any wiring that is not enclosed, either in the walls or in metal coverings located in living areas only. Extension cords and other types of wiring that extend from a wall outlet to an appliance or lamp are not considered as exposed wiring.

Electric wall outlets: A housing unit is classified as having electric wall outlets in each room if there is at least one working electric wall outlet or wall plug in each room of the unit. A working electric wall outlet or wall plug is one that is in operating condition, i.e., can be used when needed. If a room does not have an electric wall outlet, an extension cord used in place of a wall outlet is not considered to be an electric wall outlet.

Outside structural conditions: These data are provided by observation. A sagging roof is reported if it is substantial and can be seen without climbing on the roof. Missing roof materials include rotted, broken or missing shingles, tiles, slates, etc. caused by extensive damage from fire, storm or serious neglect. Holes are reported if missing materials expose the inside of the unit to the elements. Missing materials on the walls and chimney do not have to expose the inside of the unit to the elements to be reported. The defects may have been caused by fire, storm, flood, neglect or vandalism. Boarded-up windows include both windows and doors which are covered by board, brick, metal or other material. Broken windows are reported if several panes are missing or broken. Foundation defects include large cracks, holes, and rooted, loose or missing material. None of the above defects are reported if the conditions are due to construction activities, unless it is obvious that the work has been abandoned.

Unit is uncomfortably cold: Respondents are asked if any of the occupants of the unit last winter experienced discomfort because the unit was too cold for 24 consecutive hours or more. The respondent's definition of "last winter" is accepted. The reasons for discomfort due to cold are also provided.

Radon, asbestos and water quality tests: Respondents are asked if the buyer, seller, or their representative made any inquiries, inspected or tested the house for any of the listed conditions. They are also asked if water is safe for drinking and cooking.

ZADEQ =

Recoded adequacy of housing

- 1 adequate
- 2 moderately inadequate
- 3 severely inadequate
- B Not applicable

Long description:

A unit is severely inadequate if any of the following conditions exist:

1. The unit lacks complete plumbing facilities.
2. There were 3 or more heating equipment breakdowns lasting 6 hours or more in the last 90 days.
3. The unit has no electricity.
4. The electrical wiring is not concealed, working wall outlets are not present in every room, and fuses/breakers blew 3 or more times in the last 90 days.
5. 5 or more of the following exist:

outside water leaks, inside water leaks, holes in the floor, cracks wider than a dime in the walls, areas of peeling paint or plaster larger than 8 1/2 x 11, rodents seen in the unit recently

6. all 4 of the following exist:

no working light fixtures or no light fixtures at all in public hallways, loose, broken, or missing steps in common stairways, stair railings not firmly attached or no stair railings on stairs at all, there are 3 or more floors between the unit and the main entrance to the building and there is no elevator

A unit is moderately inadequate if it is not severely inadequate and any of the following conditions exist:

1. The unit lacks complete kitchen facilities.
2. There were 3 or more toilet breakdowns lasting 6 hours or more in the last 90 days
3. An unvented room heater is the main heating equipment.
4. 3 or 4 of the following exist:

outside water leaks, inside water leaks, holes in the floor, cracks wider than a dime in the walls, areas of peeling paint or plaster larger than 8 1/2 x 11, rodents seen in the unit recently

5. 3 of the following exist:

no working light fixtures or no light fixtures at all in public hallways, loose, broken, or missing steps in common stairways, stair railings not firmly attached or no stair railings on stairs at all, there are 3 or more floors between the unit and the main entrance to the building and there is no elevator

A unit is adequate if it is neither severely nor moderately inadequate.

Housing Cost

Housing Costs data include monthly mortgage and rent costs, taxes, condominium or mobile home park fees, and insurance expenses. Utility costs for fuels, water and trash are documented in the Utilities section of this codebook. Indicators of whether a unit is in a public housing project or is subsidized, as well as information on housing costs paid by non-relatives living in the unit are documented in the Income Section of this codebook. The cost of routine maintenance is included in the housing costs summary variable—ZSMHC (see below).

The AHS distinguishes between several types of units in collecting housing cost data for owner-occupied units. The intent is to identify units where special factors affect the cost variables, e.g., units on more than 10 acres. Information is collected for all owner-occupied units. The questions distinguish between the cost associated with the sample unit itself and the costs associated with other portions of the property. The same variable name is used for all groups of respondents.

Notes:

Costs for all households

Monthly housing costs: These data are combined into one variable (ZSMHC) by summing, when applicable, utility costs, real estate taxes, cost of homeowner insurance, condominium/homeowner's association fee, land/site rent, other mortgage charges, other required mortgage fees, mortgage payments, routine maintenance costs, and rent payments.

Costs for Owners

Value: The information is collected for all owner-occupied units, but is not collected for renter-occupied units.

For owner-occupied units, value represents the respondent's estimate of the property's sale price (house and lot) if it were for sale. For vacant units, value represents the property's sale price at the time of the interview, and may differ from the price at which the property is sold. The variable is available for all owner-occupied units and represents the value of the sample unit and its yard (VALUE). The value of the overall property for multi-family units, structures with commercial/medical establishments, and structures on more than 10 acres are recorded under the variable PVALUE.

Purchase Price: This is the price that was paid at the time the property was acquired (house and lot), not the estimated value at the time of the interview. If only the house is owned, but not the land, the respondent is asked for a combined estimate of the value of the house and lot at the time of purchase. If the house was a single-family unit at the time of purchase, but was split into two or more units since the purchase, the purchase price is the value of the complete structure at the time of the purchase. Purchase price includes the costs of furnishings if the property was acquired furnished. An estimate is accepted if the respondent does not know the exact purchase price. The amount reported excludes closing costs.

Fees: A “condominium fee” includes all operating and maintenance costs of the common property and related administrative costs such as utilities billed communally and management fees. A “cooperative maintenance fee” (also called carrying charges) is the share of the cooperative’s annual budget to be paid by the person occupying the sample unit, for real estate taxes, mortgage interest and operating costs. A “mobile home park fee” is the regular payment to the park management, which could include utility charges, mail handling, and/or fees for the maintenance of common areas. A “homeowners’ association fee” could include payments for the upkeep of common property (e.g., street lights, parking areas, lawns), the use and maintenance of recreational facilities, and security guards. Any fee that is optional is excluded.

Mortgage: A mortgage or similar debt refers to all forms of debt where the property is pledged as security for payment of the debt. It includes debt instruments such as deeds of trust, trust deeds, mortgage bonds, and vendor liens. In the first three arrangements, a third party, known as the trustee, holds the title to the property until the debt is paid. In the vendor lien arrangement, the buyer receives the title but the seller (vendor) reserves, in the deed to the buyer, a lien on the property to secure payment of the balance of the purchase price. Mortgage data include contracts to purchase, land contracts, and lease-purchase agreements, in which the title to the property stays with the seller until the agreed-upon payments have been made by the buyer.

Home Equity Loans/Lines of Credit: In 1997, the survey introduced 10 variables with information about aspects of home equity loans. The 2001 survey is further revised to differentiate between loans and lines of credit. A *home equity loan* is a fixed amount of money with a fixed repayment plan. A *home equity line of credit* is open-ended and may be available for as long as the person owns the unit.

Lower-Cost Mortgages: These are generally 1 to 3 percent below the current mortgage interest rate at the time the loan was obtained. These loans are managed through state or local governments, and financed from the proceeds from revenue bonds, e.g., loans for first-time homebuyers. These loans do not include federally funded programs from the Department of Veterans’ Affairs.

Wrap-around mortgage: A wrap-around mortgage is a second or junior mortgage with a face value of both the amount it secures and the balance due under the first mortgage.

Current Interest Rate: For variable interest rates, the respondent is asked to report the interest in effect at the time of the interview. If the last payment under the old schedule has been made, the rate for the next payment is recorded.

Monthly mortgage payment: The data includes all owner-occupied units. If a mortgage exists, data are collected on the monthly dollar amount paid for the mortgage’s principal and interest only. Separate amounts are available for the first mortgage, second mortgage, and any other mortgages combined.

Real estate taxes last year: The data come only from owner-occupied units. “Real estate taxes last year” refers to the yearly total amount of all real estate taxes payable in the entire property during the last billing period. It includes special assessments, school taxes, state and local real estate taxes. Excluded are payments on delinquent taxes due from prior years. Even

when the real estate taxes are included with the mortgage, a separate amount for the taxes is obtained. The information is collected for all units, including renter-occupied units, in which case the question refers to household property insurance.

Costs for Renters

Monthly Contract Rent: The monthly rent agreed to, or contracted for, even if the furnishings, utilities, or services are included. Starting in 1997, units reporting “no cash rent” still have a value calculated for them for total monthly housing costs. The effect is a slight decrease in the number of units reporting no monthly housing costs and a slight increase in the number of units reporting a small monthly housing cost.

Notes:

Not coded directly, but components are topcoded.
Monthly mortgage payment is not the same as PMT, which includes taxes and insurance.

Household Composition

Data on household composition are collected for all members of the household and describe both individual members and aggregate household demographics. Basic demographic data such as age, sex, and race are available, as well as data on years of education. The variables reflect the answers as stated by the respondent.

Some variables are collected for each individual household member, while other information is only reported as a summary for the household. Summary household variables include total number of people, number of adults, number of children, number of people not related to the head of household or reference person, and number of people 65 years or older. The availability of these summary variables varies from year to year and for metro and national surveys. Any variable can be recreated using the detailed information for each household member. Additional information on household members is contained in the Recent Mover and Income sections.

A person is counted at the usual place of residence for that person. This refers to the place where the person lives and sleeps most of the time. This place is not necessarily the same as legal residence, voting residence, or domicile. Unmarried students temporarily away in another locality to attend school are considered household members, unless they have left home permanently.

Notes:

General Household Information

The questions summarizing the household characteristics are usually asked of the “reference person.” The variables in this group provide general information about the household, such as number of people in household, number of people in family, number of children and number of adults. More detailed household level variables can be constructed using person-level variables.

Household: A household consists of all the people who occupy a housing unit whether or not they are related. By definition, the count of households is the same as the count of occupied housing units.

Number of people in household: All people occupying the housing unit are counted. These people include not only occupants related to the reference person but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the reference person.

Subfamily: A subfamily is a multiperson family separate from the reference person. A subfamily is a married couple with or without children, or one parent with one or more of their own single (never married) children living in a household and related to, but not including the reference person or spouse of the reference person. The most common example of a subfamily is a young married couple sharing the home of the husband or wife’s parents.

FAMTYP identifies the subfamily members and position. FAMNUM identifies subfamily number.

Own children: A child is defined as an “own” child if he or she is a single (never married) son, daughter, stepchild, or adopted child of the reference person. Own children of subfamilies are excluded from the total count of own children, as are foster children.

Relationships

This group of questions is asked of every household member and describes the respondent’s relationship to the reference person.

Line number (PLINE1-PLINE16): A line number is assigned to each household member’s name as it is written during the interview. Line numbers are consistent from survey to survey, and are not reassigned while the same household is present in the housing unit. For example, if the household as a whole stays in place, but the person on line 4 moves out, and a new baby is born, the baby is assigned a new line number at the end of the list, and no person in the household is assigned line number 4. There is no link between the line number and the reference person.

Reference person (Householder): Family relationships are coded in relation to a “reference person (householder)”. The householder is not necessarily the first member listed for the household or even the person with the lowest PLINE value. The householder is determined through the REL variable. REL values of 1 or 2 identify the householder. If no household member occupying the sample unit owns or rents the unit, the householder is the first household member listed who is 18 years old or older, or the first person listed if all household members are under 18.

Relationship: The variable REL provides the relationship code of each person in the household to the reference person. The variable PAR provides the line number of the father or mother of a given household member, if living in the household. If both are present, the line number of the first person listed is entered. The second parent, if present, can be identified by using the variable SPOS, which includes the line number of spouse. These two variables, together with the relationship codes, can be used to determine the composition of a household.

Other relative: This category includes all people related to the reference person by blood, marriage, or adoption except wife, husband, or child of reference person and members of subfamilies.

Nonrelative: A nonrelative of the reference person is any person in the household who is not related to the reference person by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards, and foster children are in this category.

Personal Characteristics

The American Housing Survey has information on each person in each household: age, sex, marital status, relationship to a reference person, race, etc. These can be found in the corresponding variables in the individual person file.

Age: The age classification refers to the age reported as of each person's last birthday.

Race: Household members were asked to self-identify race. The possible choices were:

- 1) White Only
- 2) Black Only
- 3) American Indian, Alaskan Native Only
- 4) Asian Only
- 5) Hawaiian, Pacific Islander Only
- 6) White / Black
- 7) White / American Indian, Alaska Native
- 8) White / Asian
- 9) White / Hawaiian, Pacific Islander
- 10) Black / American Indian, Alaska Native
- 11) Black / Asian
- 12) Black / Hawaiian, Pacific Islander
- 13) American Indian, Alaska Native / Asian
- 14) Asian / Hawaiian, Pacific Islander
- 15) White / Black / American Indian, Alaska Native
- 16) White / Black / Asian
- 17) White / American Indian, Alaska Native / Asian
- 18) White / Asian/Hawaiian, Pacific Islander
- 19) White / American Indian, Alaska Native / Asian
- 20) Other combinations of 2 or 3 races
- 21) Other combinations of 4 or 5 races

Note that these options are not the same as present in the 2000 Census.

Spanish origin: Spanish origin was determined on the basis of a question that asked for self-identification of a person's origin or descent. Note that Spanish origin modifies race, and does not replace it. For example, according to the Census definitions, it is possible to be Black of Spanish origin or White of Spanish origin.

Education level of person: The data refer to the highest grade of regular school completed and not to the highest grade attended. For people still attending school, the highest grade completed is one less than the one in which they are currently enrolled. Regular school refers to formal education obtained in graded public, private, or parochial schools, colleges, universities, or professional schools, whether day or night school, and whether attendance was full or part time. That is, "regular schooling" is formal education, which may advance a person toward an elementary or high school diploma, or college, university, or professional school degree. Schooling or tutoring in other than regular schools is counted only if the credits obtained are regarded as transferable to a school in the regular school system. Reference persons whose highest grade completed was in a foreign school system or in an upgraded school were instructed to report the approximate equivalent grade (or years) in the regular

United States school system. They were not reported as having completed a given grade if they dropped out or failed to pass the last grade attended. Education received in the following types of schools is not counted as "Regular schooling": vocational schools, trade schools, and noncredit adult education classes.

Employment: A series of questions about person's employment identifies whether the person worked last week, the number of hours worked and the type of employment (self-employed, work for an employer, etc.). See the Income section for information on earnings from employment.

AGE =

Age of person

If using single file version of AHS, this variable becomes: **AGE1-AGE16**
Information for AGE1 variable (head of household) is also stored in: **HHAGE**

0:120 0-120 years old

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	JAGE
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	Yes
<i>Module 1999 and earlier:</i>	person
<i>Module 2001 and later:</i>	person
<i>Unit of observation:</i>	PERSON
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Notes:

Topcoded at 90.

This variable is changed in a number of rare event situations.

APPLY =

How got to live in public housing

1	Applied to management on own
2	Assigned to specific address
B	Not applicable
D	Don't Know
R	Refused
Blank	Not reported

Long description:

How did you come to live here?

Did you apply on your own to the management here, OR did an agency, such as public housing authority assign this address to you?

<i>Type:</i>	Character
<i>Edit flag variable:</i>	None

- 7 : [Occupied interview and (Rented or occupied without payment)] AND [Don't know if owned by public housing authority and (Income info required for lease renewal or Refused to disclose if income info required for lease renewal) and DO NOT report income to public housing authority or a state or local housing agency and] ; OR
- 8 : [Occupied interview and (Rented or occupied without payment)] AND [Don't know if owned by public housing authority and (Income info NOT required for lease renewal or Don't know if income info required for lease renewal) and Government doesn't subsidize rent for unit or don't know or refused and] ; OR
- 9 : [Occupied interview and (Rented or occupied without payment)] AND [Owned by public housing authority] ; OR
- 10 : [Occupied interview and (Rented or occupied without payment)] AND [Government doesn't subsidize rent for unit and] ; OR
- 11 : [Occupied interview and Owned] AND [Respondent has homeowner's insurance] ; OR
- 12 : [Occupied interview and Owned] AND [Respondent does not have homeowner's insurance]

CITSHP =
U.S. Citizenship

If using single file version of AHS, this variable becomes: **CITSHP1-CITSHP16**
Information for CITSHP1 variable (head of household) is also stored in: **HHCITSHP**

1	Native, born in US
2	Native, born in Puerto Rico or US outlying area
3	Native born abroad of US parent(s)
4	Foreign born, US citizen by naturalization
5	Foreign born, not a US citizen
B	Not applicable
Blank	Not reported

<i>Type:</i>	Character
<i>Edit flag variable:</i>	JITSHP
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 2001 and later:</i>	person
<i>Unit of observation:</i>	PERSON
<i>Present in survey year(s):</i>	2001N, 2002MSA, 2003N, 2004MSA, 2005N

CUSHOM =

How owner obtained unit

1	Buy the house already built
2	Sign a sales agreement that included the land as well as the cost of building the
3	Have a general contractor build it on YOUR OWN LAND (ALSO INCLUDES LEASED LAND)
4	Build it yourself on YOUR OWN LAND
5	Receive it as a gift or inheritance
B	Not applicable
D	Don't Know
R	Refused
Blank	Not reported

Long description:

How did you obtain this home? Did you-

<i>Type:</i>	Character
<i>Edit flag variable:</i>	None
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld
<i>Module 2001 and later:</i>	newhouse
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Conditions not in universe:

- 1 : [(URE interview or vacant interview)] ; OR
 2 : [Occupied interview and Owned] AND [(Apartment building or mobile home)] ; OR
 3 : [Occupied interview and Owned] AND [Tenants are not first occupants or Respondent doesn't know if home equity is the first occupant or Refused to answer whether tenant is first occupant or Same household members live in unit] ; OR
 4 : [Occupied interview] AND [Not owned] ; OR
 5 : [Noninterview] AND [(NOT occupied interview or URE interview or vacant interview)]

DLINE1 =

Line Number of respondent

1:30	1-30
B	Not applicable

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	JLINE1
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld
<i>Module 2001 and later:</i>	newhouse
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Notes:

To determine if the reference person and the respondent are the same:

- 1) If DLINE1=PLINE and for that person REL=1 or REL=2, then the respondent is the household reference person.
- 2) If DLINE1=PLINE and REL>2 then the respondent is not the household reference person. You can identify the relationship of the respondent based on the REL variable.
- 3) If DLINE1=B (so no one living in the unit), then check RESPTYP, and that will report the type of respondent.

FAMNUM =
Family number

If using single file version of AHS, this variable becomes: **FAMNUM1-FAMNUM16**

0	Not a family
1	Primary family
2	1st Subfamily
3	2nd Subfamily
4	3rd Subfamily
5	4th Subfamily
6	5th Subfamily
7	6th Subfamily
8	7th Subfamily
9	8th Subfamily

Long description:

This is a recode created during the application of the Current Population Survey (CPS) demographic edits. It indicates whether or not this person belongs to the primary family, a subfamily, or no family within the household. If the person belongs to a family, the recode indicates which family.

<i>Type:</i>	Character
<i>Edit flag variable:</i>	None
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	person
<i>Module 2001 and later:</i>	person
<i>Unit of observation:</i>	PERSON
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

FAMREL =
Family relationship

If using single file version of AHS, this variable becomes: **FAMREL1-FAMREL16**

0	Not in a family
1	Reference person of family
2	Spouse of reference person of family
3	Child of reference person of family
4	Other relative of reference person of family

Long description:

This is a recode created during the application of the Current Population Survey (CPS) demographic edits. It indicates whether or not this person belongs to the primary family, a subfamily, or no family within the household. If the person belongs to a family, the recode indicates what his/her relationship to the reference person is.

<i>Type:</i>	Character
<i>Edit flag variable:</i>	None
<i>Allocation Matrix:</i>	None

231	231 - rented HU, 4 rooms in HU, rent \$225 - \$274
232	232 - rented HU, 4 rooms in HU, rent \$175 - \$224

Long description:

This variable describes the household which lived in this unit in 1970 for the sample cases which were selected from the 1970 Census, the

household that lived in this unit in 1980 for the sample cases which were selected from the 1980 Census, or the household that lived in this unit in 1990 for the sample cases selected from the 1990 Census. This household may not be the same as the household living in this unit at the time of the interview. If the unit was vacant in 1970, 1980, or 1990, the variable provides information about the vacancy of the unit in that year. The codes for cases selected from the 1970 Census are 01-56. The codes for cases selected from the 1980 Census are 101-162. The codes for cases selected from the 1990 Census are 201-391.

<i>Type:</i>	Character

RACE =

Race of person

If using single file version of AHS, this variable becomes: **RACE1-RACE16**Information for RACE1 variable (head of household) is also stored in: **HHRACE**

1	White Only
2	Black Only
3	American Indian, Alaskan Native Only
4	Asian Only
5	Hawaiian, Pacific Islander Only
6	White / Black
7	White / American Indian, Alaska Native
8	White / Asian
9	White / Hawaiian, Pacific Islander
10	Black / American Indian, Alaska Native
11	Black / Asian
12	Black / Hawaiian, Pacific Islander
13	American Indian, Alaska Native / Asian
14	Asian / Hawaiian, Pacific Islander
15	White / Black / American Indian, Alaska Native
16	White / Black / Asian
17	White / American Indian, Alaska Native / Asian
18	White / Asian/Hawaiian, Pacific Islander
19	White / Black / American Indian, Alaska Native / Asian
20	Other combinations of 2 or 3 races
21	Other combinations of 4 or 5 races

Long description:

What is the person's race?

<i>Type:</i>	Character
<i>Edit flag variable:</i>	JRACE
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	person
<i>Module 2001 and later:</i>	person
<i>Unit of observation:</i>	PERSON
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Notes:

In surveys prior to FY2003, the RACE codes are as follows:

1 = White

2 = Black

3 = American Indian, Aleut, or Eskimo

4 = Asian or Pacific Islander

5 = Other Race

In surveys prior to 2005, the RACE code read as follows:

19 = White / American Indian, Alaska Native / Asian

In 2005, this was changed to add Black

REL =

Relationship of person to reference person

If using single file version of AHS, this variable becomes: **REL1-REL16**

Information for REL1 variable (head of household) is also stored in: **HHREL**

1	Reference person with relatives in household
2	Reference person without relatives in household
20	Spouse (husband/wife)

SAMEHH =

Same household members live in unit

1	Yes
2	No
3	Don't Know
Blank	Not reported

Long description:

This variable was created by the bridge system.

Same household members lived in unit for previous enumeration?

<i>Type:</i>	Character
<i>Edit flag variable:</i>	None
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
<i>Module 1999 and earlier:</i>	houshld
<i>Module 2001 and later:</i>	newhouse
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1997N, 1998MSA, 1999N, 2001N, 2002MSA, 2003N, 2004MSA, 2005N

Notes:

The conversion to automated interviewing in 1997 introduced some flaws into the SAMEHH variable that have continued to occur in subsequent surveys.

Comparing data across years using SAMEHH does not yield accurate results. A partial fix is to check STATUS in the preceding year.

If STATUS ne 1 or 4 (where NOINT = 1-6) then SAMEHH must be 2.

To obtain better results, Census suggests that alternate variables such as MOVE or AGE may be useful.

SAMEHH2 =

Same household members live in unit (recode)

1	Same household (SAMEHH=1) and current year and prior year are regular interviews
2	Different household (SAMEHH=2) and current year and prior year are regular interviews

<i>Present in survey year(s):</i>	2005N

Income

Data on income are available at various levels of detail: individual household member income, relative/non-relative income, family income, and household income. The term “family” means the reference person and anyone else in the household related to the reference person. Data are available for total income, as well as individual income and assets components such as wages, social security, pensions, welfare, alimony, estates and interest income. This section also includes variables on subsidies received by the family (housing subsidies, energy subsidies, food stamps) and on contributions towards rent made by non-relatives living in the unit.

Notes:

Accounting Period: There may be significant differences in the income data among the AHS, other surveys, and Decennial Census. For example, the time period for income data in the AHS refers to the 12 months before the interview. Other income data generally refer to the calendar year before the date of the interview. Additional differences in the income date may be attributed to the various ways income questions are asked. Because the AHS questions refer to the last 12 months, there may be some inconsistencies in the way respondents provide income information within the AHS. The interviews are conducted in the fall of the survey year. Some respondents may provide information based on their last income tax return, while others may give answers based on their current income tax return, while still others may give answers based on their current income. Income includes a full year of income for all current members, even if they did not live in the household all year.

Wages and salaries: In all years, wages and salaries are reported separately for each family member (SAL1-SAL15). Similarly, sources of family income other than wages are available in all years. The level of detail in reporting income amounts from other sources and income of non-relatives varies from year to year. (See documentation of variables in this section.) Family income other than wages and salaries is aggregated under one variable (VOTHER). Total income of nonrelatives (wages, salaries and other incomes) is reported separately for each non-relative. The variable SAL (SAL1-SAL15 in the “flattened form”) – wage and salary income of person – contains the wages and salaries for family members, and total income of non-relatives. To determine whether a person is family or non-relative, use the variable REL (REL1-REL15 in the “flattened form”) – relationship to the reference person – in the Household Composition Section. It should be noted that the reference person is always family, even if he or she has no relative in the household.

Income: Income in the AHS is based on the respondent’s reply to questions about income for the 12 months before the interview. Income is the sum of the amounts reported for wage and salary income, net self-employment income, Social Security or railroad retirement income, public assistance or welfare payments, and all other money income. The figures represent the amount of income received before deductions for personal income taxes, Social Security, union dues, bond purchases, health insurance premiums, Medicare deductions, etc.

Numerous studies have attempted to assess the accuracy of self-reported income in various surveys. These studies show there are errors in both directions (over- and under-reporting), but that in general, income is underreported.

Since 1999, income data are collected for all individuals occupying the housing unit who are 16 years of age and older. Previously, income data had been collected for all people 14 years old and over.

Wage or salary income: These are defined as the total money earnings received for work performed as an employee. It includes wages, salaries, piece-rate payments, commissions, tips, cash bonuses, and Armed Forces pay. Net self-employment income is defined as net money income (gross receipts minus operating expenses) received from a business, professional practice, partnership, or farm in which the person was self-employed. Salary income includes salaries received by an official of a corporation even though the person may own stock in the corporation or be the sole employee. It excludes salaries that owners of incorporated businesses pay themselves. Respondents are first asked if the family has a business. The income from the business is to be included in the total "other income" figure. If the respondent does not distinguish between salaries paid by the corporation or paid to himself/herself and other income from business, such as profit, the total business income may be reported under wages or under other income, or in certain cases double-counted, although interviewers are instructed to watch for double-counting.

Social Security or Railroad Retirement income: This category includes cash receipts of Social Security pensions; survivors' benefits; disability insurance programs for retired people, dependents of deceased insured workers, or disabled workers; and deductions for Medicare and health insurance premiums. Cash receipt of retirement, disability and survivors' benefit payments made by the U.S. Government under the Railroad Retirement Act are also included. Separate payments received for hospital or other medical-care are excluded. This category does not include money received from the Supplemental Security Income Program (SSI), which is included under other income below.

Income from all other sources: This includes money income received from sources such as periodic payments from estates and trust funds; dividends; interest; net rental income from property rentals' net receipts from roomers or boarders; net royalties; public assistance or welfare payments, which include cash received from public assistance programs, such as old age assistance, aid to families with dependent children, and aid to the blind or totally disables; unemployment insurance benefits; money received for transportation and/or subsistence by people participating in special government training programs, such as the Area Redevelopment Act and the Manpower Development and Training Act; workmen's compensation cash benefits; periodic payments by the Veterans' Administration to disabled members of the Armed Forces or to survivors of deceased veterans; public or private pensions; periodic receipts from insurance policies or annuities; alimony or child support from people who are not members of the household; net gambling gains; and nonservice scholarships and fellowships. Money from the following sources is not included as income: value of income "in kind", such as free living quarters, household subsidies, food stamps, or food produced and consumed by the household; money received from the sale of property (unless the recipient was engaged in the business of selling banks deposits); accrued interest on "uncashed" savings bonds; exchange of money between relatives living in the same household; and gifts and lump-sum insurance payments, inheritances, and other types of lump-sum receipts.

Publicly Owned or Subsidized Housing: These data are not based on government or local records. The figures are, therefore, subject to the ability of a respondent to properly classify the unit as public or private and, if private, as subsidized or nonsubsidized housing. The publicly owned housing is not necessarily subsidized. For example, it includes houses owned by state colleges and by military bases as well as low-income housing projects. Subsidized housing, furthermore, includes state and local programs as well as federal and need not be low-income housing. There are known to be errors in reporting. As of the time of publication of this codebook, HUD is researching these errors. The final report will be available on HUD USER when it is complete.

Neighborhood

Data on neighborhood conditions include the presence of particular services, their dependability/adequacy, and the presence/extent of both of particular detriments (e.g., litter, crime pollution). Users should note that data on neighborhood conditions are based on subjective assessments of the respondent rather than on objective evaluations of the neighborhood (there are a few exceptions where the enumerator's observations are available; these are indicated as appropriate). Furthermore, neighborhood is not defined to the respondent; it is whatever the respondent considers his/her neighborhood to be. Items related to previous neighborhood are presented in the Recent Mover section. Starting in 1997, interviewers are asked to complete, by observation, a few questions describing the immediate surroundings of the sample unit. The area is defined as ½ block in any direction from the front of the building. These variables are identified in the documentation by the words "within ½ block" in the variable description.

Some of the questions were asked in a three-part format: Does the problem exist, is it disturbing to you, and does the problem make you want to move? The following questions:

- 1) Neighborhood crime (CRIMEA, CRIMEB, CRIMEC)
- 2) Neighborhood smells (ODORA, ODORB, ODORC)
- 3) Street noise (STRNA, STRNB, STRNC)

The phrase "want to move" in these variables is not intended as a measure of mobility but as a measure of dissatisfaction. Nevertheless, the variables are weakly correlated to mobility.

Utilities

This section documents data collected about the types of fuel used to operate different types of equipment in the home (including supplemental heating equipment), and the costs of utilities. Data are also available on the costs of services such as garbage collection. Cost data on mortgages and rent, taxes, furnishings, and insurance are presented in the Housing Costs section.

Notes:

Heating and Cooking Fuel: “Gas from underground pipes” is gas run through pipes from a central system to serve the neighborhood. “Bottled, or other liquid fuel” is stored in tanks that are refilled or exchanged when empty. “Kerosene and other liquid fuel” includes kerosene, gasoline, alcohol, and other combustible liquids. “Other fuel” includes any other fuel such as briquettes made of pitch and sawdust, corncobs, or purchased steam.

Utility Costs: Data about the cost of utilities are not collected if the cost is included in rent, site rent, condominium or other fee, or if the fuel is not used or obtained free. The amount for each utility is the average for the past 12 months to take seasonal variations into account. Collecting information on utility costs is difficult. Unless a household subscribes to a continuous level billing plan, utility costs fluctuate greatly from month to month. Heating bills are much higher in cold winters and air conditioning affects the electricity costs during summer. Some households receive a combined bill for more than one fuel. Respondents are asked to state their average monthly costs based on the last 12 months. If the respondent does not know the exact cost, the interviewer accepts an estimate, probing as necessary to obtain the estimate. A separate variable allows the user to determine which utilities are included in the combined amount. If a respondent does not know the cost of fuel oil, coal, or wood, the interviewer helps the respondent by obtaining information on the number of gallons (tons or cords) used and the cost per unit. If the occupants have been living in the unit for less than twelve months, an estimate based on experience and general knowledge of costs is recorded.

Main House Heating Fuel: In 1999, the type of gas (piped versus bottled) used as a main house heating fuel for vacant units was collected. In 1997, the type of gas used was inadvertently omitted from the survey, so data are not available for that year.

BUYx Variables: These variables indicate whether a renter in an occupied unit pays for utilities (electricity, other fuel, gas, oil, trash pickup, and water) separately or whether they are included in the rent. When BUYx equals ‘b’, x is paid for separately and therefore should have a value in AMTx, which is the average monthly cost of a particular utility.

Recent Movers

Data on recent movers are shown for households where the householder or a member of the household moved into the present unit during the 24 months prior to the interview. Questions in this section ask about the reasons for moving and for choosing the current unit as well as about the previous residence. Questions about the previous residence are asked of every recent mover in the household while the questions about the reasons for moving and choice of unit are asked only of mover respondents.

Notes:

Choice of present home: The respondent was asked to state all reasons for choosing the present house or apartment and then state the main reason the present house or apartment was chosen. The distribution for choice of present home may not add up to 100 percent because the respondent was not limited to one response.

Choice of present neighborhood: The respondent was asked to state all reasons for choosing the present neighborhood and then state the main reason the present neighborhood was chosen. The distribution for choice of present neighborhood may not add up to 100 percent because the respondent was not limited to one response.

Present and previous units: The present unit is the one occupied by the householder or respondent at the time of the interview. The previous unit is the one from which the householder or respondent moved. If the householder or respondent moved more than once during the 12 months prior to the date of the interview, the previous unit is the one from which they last moved.

Previous home owned or rented by someone who moved here: Data are shown for units where anyone in the present household moved within the United States during the past year.

Recent movers' comparison to previous home: This item is based on the respondent's comparison between the present unit and previous unit as to which was better.

Recent movers' comparison to previous neighborhood: This item is based on the respondent's comparison between the present neighborhood and the previous neighborhood as to which was better. The definition of neighborhood is whatever the respondent considers it to be.

Tenure of previous unit: The previous unit was owner occupied if the owner or co-owner lived in the unit. All other previous units were renter occupied.

Structure type of previous residence: These data are based on the respondent's classification.

ALMV =

All movers lived in same previous residence

1	Yes
2	No
B	Not applicable

Long description:

Earlier you told me (READ NAMES ABOVE) moved into this housing unit after another member?. Did you move here from the same previous residence?

Commuting

This section documents data released relevant to transportation issues, such as distance traveled to work, time required, number and types of vehicles owned by household, and means of transportation. The journey to work concept captures how members of the household commute to and from work. This commuting information is at the person level. Information on the number of vehicles is at the household level.

Notes:

Cars and trucks: Includes passenger cars and station wagons owned or regularly used by one or more household members and ordinarily kept at home. Company cars are counted (if used regularly for nonbusiness purposes and kept at home), as are taxicabs (if they are owned by a household member and kept at home). Information on the number of cars is stored in the CARS variable, while information on the number of trucks is stored in the TRUCKS variable. Included are pickups and small panel trucks of one-ton capacity or less, and small vans that are owned or regularly used by one or more members of the household and ordinarily kept at home. Company trucks and vans are included if used regularly for nonbusiness purposes and kept at home.

Journey to work: Includes national books and microdata. The books publish data on householders. The microdata have similar information on all workers.

Workers. Includes all persons aged 14 years and older who held a job in the United States, any time the week before the interview.

Line numbers are assigned as the interviewer writes the names of household members in the form. Workers in each household can be identified based on their line number stored in the PERSON variable in the Journey to Work file or PERSON1-PERSON16 variables in the “flat file” version. The Journey to Work file only contains information on the working members of the household. When the individual files are merged into a single file, the line number for each worker from the PERSON variable in the Journey to Work file is carried over to the PERSON1-PERSON16 variables in the “flat file” version. If a household member did not hold a job in the United States at any time the week before the interview, the line number for that person in the corresponding variable in the PERSON1-PERSON16 array is coded as missing (“.”). For more information on how the “flat file” and the individual files are structured, refer to the “Data Structure” section of this codebook.

Principal means of transportation to work last week. This refers to the principal mode of travel used to get from home to work. People who use different means of transportation on different days of the week were asked to specify the one used most often. People who use more than one means of transportation to get to work each day were asked to specify the one used for the longest distance during the trip to work. Public transportation refers to bus, streetcar, subway, or elevated trains. Other means include car, truck, taxicabs, ferryboats, surface trains, van service, and walking. Respondents may also answer that they work at home.

Travel time from home to work. The total elapsed time in minutes to commute from home to work during the week prior to the interview is the travel time to work. The elapsed time includes

time spent waiting for public transportation and picking up members of carpools. Respondents were instructed to report travel time to the nearest minute.

No fixed place of work. Workers with no fixed place of work were those who did not usually work at the same location each day and did not usually report in to a central location to begin work each day.

Distance from home to work. This was the usual one-way “door-to-door” distance in miles from home to work during the week prior to the interview. Respondents were instructed to report travel rounded to the nearest mile.

Departure time to work. Refers to the time (hour and minute) at which the respondent left for work. Respondent is also asked whether the time is a.m. or p.m.

AMPM =

Time usually leave for work - am or pm

If using single file version of AHS, this variable becomes: **AMPM1-AMPM16**

1	AM
2	PM

Long description:

What time did you usually leave for work? Was that A.M or P.M.?

Mobile Homes

Mobile homes or trailers are living quarters originally constructed to be towed on their own chassis. These include double wides, expandables, and single wides. Mobile homes placed on permanent foundations or with one or more permanent rooms attached are not counted as mobile homes. It also may have permanent rooms attached at its present site, or other structural modifications. The term does not include prefabricated buildings, modular homes, travel campers, boats, or self-propelled vehicles like motor homes. Some people use the terms trailer or manufactured housing in the same sense as mobile homes.

The questions in this section ask the respondent about the mobile home model year, fees and structural type.

Notes:

Mobile homes in group: Mobile homes or mobile home sites gathered close together are considered to be in a "group." This may be a mobile home park or it may be a number grouped together on adjacent individually owned lots but not in a mobile home park.

Model Year: Because mobile home model years are similar to automotive model years, it is possible to have a mobile home with a model year later than the current year (or later than the year the occupant moved in).

ANCHOR =

Method used to anchor mobile home

1	Yes
2	No

Lead Based Paint

Questions in this section deal with condition of paint in the respondent's home and the respondent's awareness of lead paint. Respondents were asked were they had peeling paint, whether peeling paint was inside or outside the house and whether any work was done, such as sanding and scraping that would have disturbed painted surfaces. Additionally, respondents were asked if they were told before moving in that the paint might contain lead or if they received a pamphlet about lead, and if their unit was ever tested for lead.

The items in this section are restricted to housing units built before 1978 because lead was an ingredient in common house paint until 1978. After 1978, lead was banned as an ingredient in residential paint.

Notes:

Size of area of peeling/flaking paint – Lead paint policy makes a distinction of "greater than 2 square feet" and "less than two square feet" of peeling/flaking paint. During the pretest, respondents had a difficult time understanding the concept of "2 square feet"; thus, the question was reworded to include a common object that is approximately 2 square feet in size (e.g., one page of newspaper) to help respondents answer the question.

Besides this room, how many other rooms also have a large amount of peeling or flaking paint – A "large amount" of peeling or flaking paint would be an area that is larger than 1 page of newspaper (e.g., 2 feet by 1 foot).

Peeling paint more/less than ½ door – For peeling/flaking paint on the exterior of a building, lead paint policy makes a distinction of "greater than 10 square feet" and "less than 10 square feet." During the pretest, respondents also had a difficult time understanding the concept of "10 square feet"; thus, the questions were reworded to include a common object that is approximately 10 square feet in size (e.g., half the size of a standard front door) to help respondents.

Seller/agent said lead was possible – A recent law (Title X of the Housing and Community Development Act of 1992) requires that, beginning in 1996, sellers and landlords of dwellings built before 1978 inform potential buyers and tenants that there could be lead-based paint in such dwellings and that lead-based paint can be hazardous to their health. Sellers and landlords are also required to disclose any specific knowledge he/she may have about lead paint in the dwelling. These items attempt to assess the prevalence of disclosure to buyers and tenants who moved in the previous 12 months.

BEAF78 =

Upgrade and Remodeling

This section contains information from questions asked about additions, alterations and repairs to housing units in the survey. Information includes questions about changes to amount of unit square footage, type of unit, and unit quality. In addition, the microdata file also includes information about whether the household got a low interest loan or grant to pay for repairs and the amount spent in a typical year on routine repairs and maintenance.

Notes:

Replacements and additions. The statistics refer to within 2 years prior to the interview and are restricted to owner-occupied units. The respondents were first asked if, in the last 2 years has there been a major disaster, such as an earthquake, tornado, hurricane, landslide, fire, or flood that required them to make extensive repairs to their home. Only if the damage involved at least 2 rooms or a majority of the home were replacements and additions counted as disaster required repairs. Respondents were asked to name major repairs made within the last 2 years. Also, they were asked if the repair was a replacement or an addition, if someone in the household did the work, and the cost of the repair.

The microdata file shows the total number of replacements/additions reported by all households, and the total cost of these replacements/additions. Each household could name as many as 74 jobs done in their home. In 1999, the maximum number of replacements/additions reported was 31. Questions were asked about where the work was done, if any rooms were created or attached, and if the bathroom or kitchen had been remodeled within the last 2 years.

Respondents also were asked if they added or replaced their roof, siding, interior water pipes; electrical wiring, fuse boxes or breaker switches; doors or windows; plumbing fixtures such as sinks or bath tubs; insulation; wall to wall carpeting, flooring; paneling or ceiling tiles; air conditioning; built in heating equipment; septic tank; water heater; dishwasher, garbage disposal; driveways or walk ways; fencing or walls; patio, terrace or detached deck; swimming pool, tennis court and other recreational structures; shed, detached garage or other buildings.

APTAD =

Space added to apartment

1	Yes
2	No
B	Not applicable
Blank	Not reported

Allocation Variables

Missing Values

While the Census Bureau makes all reasonable efforts to collect valid responses to all survey questions, respondents do not always provide information. Non-response occurs for various reasons, ranging from not knowing the answer to refusing to answer the question. For most variables, the Census Bureau enters a missing value code for that response. For certain key variables, however, the Census Bureau applies a procedure to allocate or assign values to those missing data. This process, known as allocation at the Census Bureau, is often referred to as imputation of missing values.

In 1997, the AHS changed the way missing values are coded. Previously, different types of missing values were coded using all 9's and then counting down by one from there. For example, 9999 = Not applicable, 9998 = Not answered, etc. The coding change in 1997 took advantage of special SAS missing value functions. SAS enables users to differentiate among classes of missing values in numeric data. For numeric variables, users can designate up to 27 special missing values by using the letters A through Z, in either upper- or lowercase, and the underscore character (_). Use the following SAS statement to define these values as missing:

```
missing B D R;
```

Analogous missing values are also present in ASCII versions of the microdata.

In the SAS data files, the missing values are as follows:

B = Not applicable
D = Don't Know
R = Refused
Blank or . = Not reported

In the ASCII text version of the data, the system of coding missing values is more complicated. When the range of valid values for a particular variable contains two or more digits or the largest valid value is greater or equal to 6, then the codes are the following:

-9 = Not applicable
-8 = Refused
-7 = Don't Know
-6 or Blank = Not reported

Otherwise, when the valid values for a variable have only one digit and the largest valid value is less than 6, then the coding for missing variables is:

9 = Not applicable
8 = Refused
7 = Don't Know

6 or Blank = Not reported

This change in the coding of missing values means that programs developed to use previous years of AHS data may need to be revised to run properly and accurately. If programs are not adapted, the program may crash, report errors, or produce erroneous results.

For allocated values, the Census Bureau uses a procedure called “hot-decking” in which a missing value is replaced with the last value for that variable for a unit with the same selected characteristics. The collection of possibilities for units with the same characteristics is referred to as an *allocation matrix* whose dimensions are based on a set of selected variables being allocated. Different matrices are used to create replacements for missing values for different variables or questions.

A more complete description of the allocation matrices and the allocation process can be found in the “Allocation Matrices” appendix.

Income Limits FY2003

This section contains documentation for variables describing the income limits, Fair Market Rents (FMRs), area median incomes, and poverty levels for the records in the public use microdata of the 2003 AHS National Survey. As of the release of version 1.75 of the AHS Codebook, this data have not yet been added to the distribution of the AHS national file, but are expected to be added shortly. Documentation is included here in anticipation of that update.

FMRs, area median incomes, poverty levels, and income limits are area-specific figures that HUD calculates annually to help administer several of its assistance programs. Detailed explanations on how they are determined and data files for current and previous years are available at:

<http://www.huduser.org/datasets/fmr.html> (FMRs); <http://www.huduser.org/datasets/il.html> (income limits); and <http://aspe.hhs.gov/poverty/poverty.shtml> (poverty income guidelines).

This narrative discussion is based on the documentation provided by HUD.

HUD determines 3 sets of income limits for each area (typically a county or group of counties): 30%, 50%, and 80% of area median income. These three income limits are then adjusted for household size, and used for various administrative purposes. The procedure is as follows:

1. For each area, estimate a median income.
2. Multiply the median income by 30, 50, and 80 percent.
3. Apply certain exceptions and make adjustments to these amounts.
Steps 1-3 determine three income limits for 4-person households. Step 4 adjusts for household size:
4. Multiply the amount from the previous step to get the amounts for each household size. For example, multiply by 70 percent to get the 1-person income limit.

The 2003 estimates in the AHS data were calculated in a different way from the estimates of previous years. In order to understand this change, some background on the geographic variation of income limits and fair market rents is required, as is an understanding of the geographic variables available in the AHS public use file (PUF). To avoid repetition, in the discussion below "income limits" should be understood to mean "income limits, area median incomes, and fair market rents."

HUD's Economic Market Analysis Division (EMAD) estimates income limits annually for every metropolitan area and nonmetropolitan county in the United States. However, the AHS PUF identifies the metropolitan area (via the SMSA variable) only when the area has a population of 100,000 or more persons. Other AHS variables that have a geographic component include REGION (the four Census regions), METRO3 (central city, suburban, or nonmetropolitan), and DEGREE (heating and cooling degree days).

In the mid-1990s, a group of HUD analysts computed population-weighted averages of 1995 HUD income limits and fair market rents for the areas identified by SMSA and for the other areas denoted by all possible combinations of REGION*METRO*DEGREE (METRO was an earlier version of METRO3). These averages were used as input by a computer program that looked up the correct information in that file, for each AHS record. The program also applied the household size adjustments and calculated poverty incomes. Finally, these values were updated for inflation, using the Consumer Price Index.

Thus, the data in earlier versions of the AHS income limits files were inflation-adjusted 1995 HUD income limits. Where the metropolitan area was known, the appropriate limits were applied. For other areas, the REGION*METRO*DEGREE limits were applied.

The Census Bureau has recently developed a geocoded database that allows analysts to identify the county and metropolitan area of each AHS record. (For confidentiality reason, access to this database is limited to sworn Census employees.) The existence of this database and improvements in computing power have made it possible to match 2003 AHS records with the income limits appropriate to that housing unit's county or metropolitan area.

The current file thus uses actual HUD 2003 income limits (available at <http://www.huduser.org/datasets/il/fmr03/index.html>) for all records identified by SMSA. For those not so identified, the income limits are averaged across all records with the same REGION*METRO3*DEGREE combination. (This was done to preserve confidentiality.) However, the basis of the limits are the HUD 2003 limits, not inflated 1995 limits. Thus, the new limits will more accurately reflect current income and rent conditions.

FMR =

Fair market rent (average)

Long description:

Fair market rents (FMRs), set at the 40th percentile of estimated gross rental costs for standard quality rental housing units, are used to determine the eligibility of rental housing units for the Section 8 Housing Assistance Payments program. FMR (average) is a population-weighted average of the different FMRs existing within one AHS location.

<i>Type:</i>	Numeric
<i>Edit flag variable:</i>	None
<i>Allocation Matrix:</i>	None
<i>Topcoded:</i>	No
Module 2002 and earlier:	Separate data file - see note.
Module 2003 and later:	newhouse
<i>Unit of observation:</i>	HOUSEHOLD
<i>Present in survey year(s):</i>	1997N, 1999N, 2001N, 2003N

Notes:

1. Fair market rent is in dollars per month.
 2. In 2001, FMRs for 39 selected areas began being calculated at the 50th percentile level.
 3. Prior to 2003, FMR estimates are based on official HUD numbers as of 1995, updated for inflation. Starting in 2003, they are based on current levels.
- Prior to the 2003 National file, income limit data are contained in a separate file available on HUD USER.

FMRA =

Fair market rent (minimum)

Long description:

Fair market rents (FMRs), set at the 40th percentile of estimated gross rental costs for standard quality rental housing units, are used to determine the eligibility of rental housing units for the Section 8 Housing Assistance Payments program. FMR (minimum) is the lowest FMR value present in an AHS location.

<i>Type:</i>	Numeric

Topcoded: Yes
Module 2002 and earlier: Separate data file - see note.
Module 2003 and later: newhouse
Unit of observation: HOUSEHOLD
Present in survey year(s): 2003N, 2004MSA, 2005N

Notes:

Topcoded at 100,000. Listed topcode appears on microdata.
Bottomcoded at -10,000. Listed bottomcode appears on microdata.
In surveys prior to 2005, the Census Bureau's practice was that if a household listed no sources of nonlabor income, VOTHER was coded as blank, not zero. Similarly, if a person had no labor income, SAL was coded as blank. Beginning in 2005, these became zero values instead.

Conditions not in universe:

1 : [NOT occupied interview] ; OR
2 : [Occupied interview] AND [(Did NOT receive income from business/farm/ranch and Did not receive social security income or pension and Did NOT receive interest from savings, cd, etc. and Did NOT receive dividends from stock and Did NOT receive rental income and did NOT receive ssi, afdc, other welfare and Did NOT receive alimony or child support and Did NOT receive workers company or other disability and Did NOT receive unemployment /vet. Payments/other income)]

Appendix A: About the American Housing Survey

The American Housing Survey (AHS) can be used to answer many questions about housing units and households in the United States. The AHS provides data on apartments, single-family homes, mobile homes, vacant homes, family composition, income, housing and neighborhood quality, housing costs, equipment, fuels, size of housing unit, and recent movers. The survey started in 1973 and has had the same core sample since 1985, which provides a panel data series on homes and household changes over the years.

The national survey is conducted in every odd-numbered year, collecting data from a fixed sample of about 50,000 homes, and adding newly constructed units as well. The metropolitan survey is conducted in even-numbered years, cycling through a set of 41 metropolitan areas, surveying each one about once every six years. A list at the Census Bureau web site, <http://www.census.gov/hhes/www/housing/ahs/metrodates.html>, shows which areas are covered in each metro survey. In addition, the six largest metropolitan areas are surveyed every four years (1995, 1999, 2003) as a supplement to the national survey.

The U.S. Census Bureau (Census) conducts the surveys in person and by telephone for the U.S. Department of Housing and Urban Development.

Changes in the 2005 AHS

There were three major changes in the 2005 AHS:

- A new system for collecting and imputing income data.
- A new sample of manufactured (mobile) homes
- A new sample of assisted living units

In addition, the dataset has these new or changed items:

- Type of manufactured (mobile) housing unit (MOBILTYP).
- Access to units without requiring steps (NOSTEP).
- Whether assistive services are provided to households in multifamily structures (ASSTSERV).
- Whether personal services are provided to households in multifamily structures (PERSERV).
- Revised coding of the same household variable (SAMEHH).

See the appropriate variable entries for details.

Income

Before 2005, the AHS field representatives (FRs) collected these data from each household:

1. Wage and salary amounts from each family member (SAL).

2. Whether or not any family member received income from a variety of specified non-wage sources (various variables beginning with Q...).
3. The total amount of non-wage income received by family members (VOTHER).
4. The total amount of wage and non-wage income received by non-family members of the household (recorded in SAL, although this included non-wage income).

The AHS dataset included two recoded income variables, ZINC (total family income) and ZINC2 (total household income).

Beginning in 2005, the FRs collect these data:

1. Wage and salary amounts from each *person*, including family and non-family household members (SAL).
2. Whether or not each *person* receives income from a variety of specified non-wage sources (variables beginning with PQ...). Note: the organization of the sources has changed as well.
3. The amount of income each *person* receives from each non-wage source. The dataset reports the total non-wage income (PVOTHER).

The dataset still includes ZINC, ZINC2, and VOTHER. A new variable is VOTHER2, total *household* non-wage income.

Because of the new system of collecting income data, the 2005 AHS also implements a new system of imputing missing values for the income variables. This new system uses an upper-triangular regression approach to populating and applying hot deck vectors. Technical details concerning this method will be published in a separate document.

In addition, in previous surveys the practice was to code SAL and VOTHER to missing values if the person or family had no income of the appropriate type. In 2005, these variables are coded as zero. This also applies to the new variable, VOTHER2.

Manufactured (Mobile) Home Sample

The Census Bureau updates the AHS sample every time to include new housing units added to the stock since the previous survey. The updating procedure is known to be less effective in detecting new manufactured housing, particularly those units placed on private lots instead of manufactured housing communities. To compensate for this, the Census Bureau reinforced the 2005 sample by a new sample of manufactured housing, drawn from the 2000 decennial census.

Assisted Living Sample

The definition of a housing unit has been modified in recent years. The earlier definition stipulated that, among other things, the residents of a housing unit had to eat their meals separately from others. This had the effect of excluding units in assisted living communities, where meals are served communally (but which meet the other elements of the definition). In

order to pick up older units, which would be included in the new definition but not the old, the AHS drew a sample of likely units from the decennial census. The FRs then gave the selected addresses a preliminary screening to determine if they met the definition of a housing unit. Those that did were added to the AHS sample.

Changes in the 2003 AHS

The two major changes in the 2003 survey are race coding and rebenchmarked weights.

Race

In 2003, multiple race classifications were introduced, allowing respondents to classify themselves in more than one race category, and eliminating the "other" category from the edit of the answer category.

Persons were asked to self-identify race by choosing one or more of six race categories:

White

Black or African American

American Indian and Alaska Native

Asian

Native Hawaiian and Other Pacific Islander

Some Other Race (this category is not read or displayed to respondents)

The 2003 American Housing Survey uses the complete Current Population Survey persons' edits, placing respondents in one of 21 possible race categories (see HHRACE or RACE). These edits do not allow "other" entries in race, but allocate one of the five specified response categories to those people reporting "other" race.

Previously many Hispanic householders (about 30 percent in 2001) stated that they were "other race," and 78 percent of the "other" race householders in 2001 were Hispanic. In 2003, although people may have reported themselves as "other" race, the edits allocated them to a different race category. So while over 7,000 people (6,100 of whom were Hispanic), said they were "other" race, the edits assigned a category of "white only" to 92 percent of the Hispanics who had reported "other race." This ratio corresponds to the responses of Hispanics who do report a race category.

Weighting

In 2003, the independent estimates (control totals) used to produce the weights are based on the Census 2000 with an estimate of change since then. This 2000-based weighting produces, on average, estimates that are about 1.0 percent lower than 1990-based weighting.

The 2003 AHS estimates are not available using 1990-based weighting. For comparative purposes 2001 data were produced using 2000-based weighting (the original data used 1990-based weighting). As can be seen in the table below, the switch from 1990-based to 2000-based weighting produced a 1.0 percent lower estimate for 2001 at the United States level. The

effect of the weighting change ranged from a 2 percent drop in the West to 2 tenths of a percent increase in the Northeast.

Detailed 2001 AHS data using 2000-based weighting are available from the Housing and Household Economic Statistics Division, U. S. Census Bureau, Washington, DC, 20233-8500 (301-763-3235).

Table: Total Housing Units in 2001 from the American Housing Survey Using 1990-based and 2000-based Weighting

Area	2000-based weighting (revised)	1990-based weighting (as published)	Difference	Percent Difference
United States	118,196,000	119,117,000	-921,000	-1.0
Northeast	22,382,000	22,347,000	35,000	0.2
Midwest	27,396,000	27,748,000	-352,000	-1.3
South	43,466,000	43,571,000	-105,000	-0.2
West	24,953,000	25,450,000	-497,000	-2.0

Changes in the 2001 AHS

Several changes were made in the 2001 AHS data file that are reflected in the codebook.

The 2001 AHS data includes new variables containing information from the regarding mortgages, lines of credit, citizenship, nationality, and country of birth.

Data at the household level of observation from three files—household, toppf, and weight—has been merged to one new file—newhouse. In addition, information for the head of the household from the person level has also been included. This consolidation enables users to study household level data more extensively without having to merge files. The codebook lists both modules. The “file flattening program” has been updated to work with this change.

In December 2002, HUD and Census released a new dataset in order to add a variable, WGT90GEO. The new variable is an *alternative* weight for AHS records. This new weight is adjusted for 1990 metropolitan geography, as opposed to the standard weight, which is based on 1980 geography. This new weight is provided to allow matching to the printed reports. Both weights sum to national control totals for total units for 2001. Totals for all units will match when computed with both sets of weights, although occupied unit totals and any breakdown do not match. Additional information on how to use the new weight is described in the beginning of the chapter on Sample status, weighs, interview status.

Evolution of AHS in 1997 and later

Note: This information summarizes text included in the Documentation of Changes in the 1997 American Housing Survey available on the HUD USER (<http://www.huduser.org/>) Web site.

Data Collection

In 1997, the Census Bureau changed from the existing survey process to a paperless system. This new system – Computer Assisted Personal Interviewing (CAPI) – was implemented to accomplish a number of goals. First, the system was intended to make the interviewing process faster and more accurate. The pattern of questions posed to respondents is no longer left up to the interviewer with CAPI; the computer now makes those determinations. CAPI automatically follows the question skip pattern, thus speeding up the interview and ensuring that respondents are asked the proper questions. Second, the conversion was intended to reduce costs and speed the release of data to the public. The information is entered directly into the system, so it is no longer necessary to enter data from the paper survey .. This process also reduces the introduction of errors that generally occur during the data entry process. Finally, CAPI was also implemented in an effort to reduce the burden on respondents with some questions asked only once and then verified in later years. This process is only used for variables thought to be fairly constant over time. This technique, also known as “dependent interviewing,” can lead to significantly faster interviews and additional data reliability in the future. This technique was partially introduced in 1997 and fully implemented in 1999.

New Data Processing Structure

Along with new data entry procedures, the AHS data are now manipulated and processed using a completely new set of software. In years prior to 1997, Census manipulated the data using custom FORTRAN programs developed internally, running on a UNISYS mainframe. In 1997, Census moved the entire processing of the AHS into SAS running on SUN Microsystems workstations. This change to SAS necessitated redesigning the processing system and writing new programs to produce the tables in the printed report. As part of the conversion, Census designed their programs to take advantage of some of the special features and functions available in SAS, which in turn led to changes in variable codes.

New Data Structure

Following the changes in data entry and processing, the Census Bureau took advantage of the flexibility of the SAS software to generate the output data files in a new format. Prior to 1997, the public use file (PUF) of the AHS was a single text (ASCII) file with a “flat” data structure. In such a file, each housing unit’s information is contained on a single logical record. The file has a set number of characters for each observation with each variable having a fixed location in the file. This file format that had been established many years ago, however, and was not Year 2000 (Y2K) compliant – all variables containing years were allocated only two digits rather than the four digits required. In the process of changing the data structure to make the data file Y2K compliant, Census took advantage of the opportunity to enhance the data format in other ways as well.

The “raw state” of the AHS data in 1997 and 1999 was a collection of 10 files, each containing data in a different format or layout. In the 2001 survey, the Census Bureau combined contents of the weight, toppuf, and household files into a new file, called newhouse. Now, all of the household level observations are in the same file. Each record type corresponds to one or more module(s) in the data collection instrument or processing. This new file format removes

the issue of fixed variable lengths and allows for a wider range of values. In addition, the new file format corresponds to the actual data collection process. The 2001 files are:

Modules 2001	Modules 1997, 1998 Metro, and 1999
<ul style="list-style-type: none"> HOMIMP – questions about upgrades and remodeling 	<ul style="list-style-type: none"> HOMIMP – questions about upgrades and remodeling
<ul style="list-style-type: none"> JTW – journey to work or commuting information 	<ul style="list-style-type: none"> JTW – journey to work or commuting information
<ul style="list-style-type: none"> MORTG – mortgage information 	<ul style="list-style-type: none"> MORTG – mortgage information
<ul style="list-style-type: none"> NEWHOUSE – Household-level information, data recodes, unit characteristics, and weighting information, 2001 data only 	<ul style="list-style-type: none"> HOUSEHLD – household level information (on internal Census data, this file is called “houshd”) TOPPUF – general unit characteristics and data recodes WEIGHT – weighting information
<ul style="list-style-type: none"> OWNER – questions just for owners of rental properties 	<ul style="list-style-type: none"> OWNER – questions just for owners of rental properties
<ul style="list-style-type: none"> PERSON – individual person level information 	<ul style="list-style-type: none"> PERSON – individual person level information
<ul style="list-style-type: none"> RATIOV – verification of income to cost when the ratio of income to cost is outside of certain tolerances. 	<ul style="list-style-type: none"> RATIOV – verification of income to cost when the ratio of income to cost is outside of certain tolerances. (Note: This file is present beginning with the 1998 AHS metro sample. This file is not present in 1997.)
<ul style="list-style-type: none"> RMOV – recent mover information 	<ul style="list-style-type: none"> RMOV – recent mover information

At first, the files were available only in an SAS format. Later, HUD created ASCII (text) versions of the files and made them available to users. The ASCII files are not a Census Bureau product. The ASCII versions have the same multi-file layout as the SAS versions, but differ in the coding of missing values.

The general structure of the collection of files in 1997 and later are different from the 1995 file structure and earlier versions. The files in 1997 and later are more analogous to a relational database so that it is **not** possible to simply merge the files together to create the flat file. Each file is based on the unit of observation for that file. A file, for example, on the housing unit structure has one observation for each housing unit while the file on people living in the housing unit has one observation for each person in the household (and so if there are multiple persons in the household, there will be multiple observations). As a result, the files have different numbers of observations depending on base unit of observation.

Users can use the raw information in its current state, develop their own programs to read the data in and convert it, or convert the data into a format that is similar to the older format. ICF Consulting has also developed a conversion program that combines the different data files into a flat-file format that is similar to that of the 1995 dataset. The final format is a SAS dataset with a similar structure to the original flat file with each observation equal to one housing unit. That

program can be found on the HUD USER Web site under the links for AHS data. The program is also included in the distribution of the data in SAS format from the HUD USER Web site. Currently, the conversion program is written in SAS and works only in SAS. AHS users not using SAS will need to convert the programs to the system they are using or use a program developed by another AHS user. The AHS electronic mailing list exists, in part, to facilitate such exchanges. The Census Bureau and HUD do not officially support the flat file format. Further discussion on this topic can be found under "Discussion of the File Flattening Program."

Missing values

One of the changes in the 1997 AHS is the coding of missing values. Previously, missing values were general coded as all 9's, and then counting down by one from there. For example, 9999=Not applicable, 9998=Not answered, etc. There were generally only two possible values. One of the improvements in 1997 is the ability to distinguish among a variety of reasons for missing values.

The 1997 AHS changed the coding of missing values by taking advantage of the SAS missing value functions. Analogous missing values are also present in the ASCII version of the microdata.

In the SAS data files, the missing values are as follows:

- B = Not applicable
- D = Don't Know
- R = Refused
- Blank or . = Not reported

When the range of valid values contains two or more digits *or* the largest valid value is greater or equal to 6, then the equivalent in the ASCII text version of the data are:

- 9 = Not applicable
- 8 = Refused
- 7 = Don't Know
- 6 or Blank = Not reported

Otherwise, when the valid values for a variable only has one digit *and* the largest valid value is less than six, then the coding for missing variables is:

- 9 = Not applicable
- 8 = Refused
- 7 = Don't Know
- 6 or Blank = Not reported

This change in the coding of missing values means that programs developed to use previous years of AHS data may need to be revised to run properly and accurately. If programs are not adapted, the program may crash, report errors, or produce erroneous results.

Topcoding and Other Confidentiality Measures

Extreme high or low values for a characteristic may be able to be linked to an individual household, and so in a limited number of circumstances, the Census Bureau modifies the public use microdata to reduce the possibility of identification. As a result, a number of the variables on the AHS public use microdata files are topcoded and/or bottomcoded to preserve the survey respondent's confidentiality. "Topcoding" refers to adjusting the values at the upper end of a distribution (above a certain threshold) while "bottomcoding" refers to adjusting the values at the bottom end of a distribution.

Note: When producing the AHS printed reports, the Census Bureau uses data that has not been topcoded. As a result, for items involving topcoded variables it may not be possible to replicate the printed report results exactly.

Currently, variables are topcoded in a number of different ways. The threshold used for changing values and the substituted new values vary depending on the variable. These could include: 97th percentile, 99.5th percentile, or a predetermined value. In different years, different topcoding levels may be used depending on the characteristics of the data. Some variables are topcoded using the topcode of a different variable. For each variable, the codebook notes whether or not variables are topcoded, and also notes which method was used.

In general, for data for 2001 and later, all values above a variable's topcode threshold percentile were replaced with the mean of all values above this threshold percentile. Exceptions are explained in the *Notes* section for each variable that is topcoded differently. In contrast, in 1997 to 1999, all values above a variable's topcode threshold percentile were replaced with the greater of either the threshold percentile or the highest topcoded values for 1985 and later years.

The topcodes are calculated differently for the AHS-National and the AHS-Metropolitan surveys. The topcodes are calculated using the entire data file for the AHS-National except where noted below. In the AHS-Metropolitan survey, the topcodes are calculated uniquely for each MSA that is enumerated in the survey year.

Other notes about the topcoding/bottomcoding operation

1. Number of cases used to compute the mean for the topcodes
The Census Bureau's Disclosure Review Board's policy is that there must be at least three cases included in the calculation of this mean. It is not unusual in the AHS surveys, particularly in the AHS-Metropolitan survey, for a variable's universe of cases to be so small that there is not a minimum of three cases greater than or equal to the topcode predetermined or calculated for that variable. In these instances, the value of the topcode is lowered until there are at least three cases that can be included in the calculation of the mean. In the rare instances where there are not three eligible cases in the entire universe for a variable, no topcode is used at all. In the AHS-Metropolitan survey, there are occasions where a variable may have a large enough universe to obtain at least three cases for the mean in some MSAs, but not in others. When this happens, the topcode and its related mean are calculated across all MSAs enumerated

in that survey year.

2. Longitudinal topcodes

Topcodes for variables that describe the physical characteristics of housing units that are not likely to change very much over time are compared to topcodes used in previous enumerations of the AHS survey. The larger of the topcode calculated in the current survey year and the largest topcode ever used in a previous survey year is the topcode that will be used for the current survey year. The variables that fall into this category are: CLIMB, FLOORS, LOT, NUNITS, and UNITSF.

3. Special topcoding of mortgage data

The Disclosure Review Board decided that the following variables must not sum to more than the topcode for the variable VALUE: AMMORT, AMMRT2, AMMRT3, AMMRT4, HEBAM1, HEBAM2, HEBAM3, HECCR1, HECCR2, HECCR3. If the sum of these variables does exceed the topcode for VALUE, the variables are changed to ensure the sum is less than or equal to the topcode for VALUE.

Other Confidentiality Measures Used

In addition to topcoding and bottomcoding variables, a number of other variables on the public use microdata file are reviewed and possibly changed to protect the respondent's confidentiality. The Census Bureau requires that no geographic areas in a sample survey containing less than 100,000 in population be identified on a public use microdata file. The AHS public use microdata files contain a number of geographic variables. The Census Bureau take steps to ensure that no combination of these geographic variables will identify an area with a population less than 100,000 by either suppressing or changing the values of one or more of these variables. Likewise, steps are taken to eliminate rare events that could allow a respondent to be identified. Details documenting the variables affected are described next.

Geographic variables changed and/or suppressed to comply with the 100,000 population rule

These variables are changed and/or suppressed in the AHS-National survey:

- CMSA
- DEGREE
- METRO3
- SMSA

These variables are changed and/or suppressed in the AHS-Metropolitan survey:

- COUNTY
- LONGIT
- METRO
- PSUDOTCT
- STATE

Appendix B: Definitions

The definitions are alphabetized by the titles used in summary tables. Some cross references are provided, and if a specific topic is not located, try related topics. The definitions apply to summary tables, and also to the computer files ("microdata"), unless they are marked "not applicable."

Adults and single children under 18 years old. See "Household composition."

Age of householder. The classification refers to the age reported for the householder as of that person's last birthday.

Age of other residential buildings within 300 feet. The respondent was asked to describe the age of other residential buildings within 300 feet of the sample unit. The responses were then classified as: "Older," "Newer," "About the same," or "Very mixed." "Very mixed" indicates that the ages vary. If there are no other residential buildings within 300 feet, "No other residential buildings" is marked.

Amenities. See "Selected amenities."

Amount of savings and investments. These data are collected only for families and primary individuals with total incomes of \$25,000 per year or less, to indicate how many have substantial assets in spite of their low incomes. Savings include savings in a bank, other financial institution, or money market account. Other investments include stocks, bonds, rental properties, second homes, real estate, antiques, art, certificates of deposit, IRA or KEOGH accounts, and commodities. Investments exclude the primary residence and its furnishings, and cars.

Annual taxes paid per \$1,000 value.

Books. Real estate taxes paid per \$1,000 value of the house (and lot, except on mobile homes) are presented. Medians for taxes per \$1,000 value are rounded to the nearest dollar.

Microdata. Not applicable, can be calculated from taxes and value.

Bars on windows of buildings. The respondent was asked if any of the buildings within 300 feet of the sample unit have metal bars on the windows. The condition of the windows has no bearing on this item. The windows might be in perfect condition, but the bars might be there to protect against vandalism. Windows that are boarded up or covered with metal sheeting are not included.

Bathrooms. See "Complete bathrooms."

Bedrooms. The number of bedrooms in the housing unit is the count of rooms used mainly for sleeping, even if they also are used for other purposes. Rooms reserved for sleeping, such as

guest rooms, even though used infrequently, are counted as bedrooms. On the other hand, rooms used mainly for other purposes, even though used also for sleeping or designed as bedrooms, such as a living room with a hideaway bed or a den or sewing room, are not considered bedrooms. A housing unit consisting of only one room, such as a one-room efficiency apartment, is classified by definition as having no bedroom.

Bodies of water within 300 feet. These questions determine the proximity of the respondent's property to bodies of water such as ponds, lakes, rivers, or ocean. Swimming pools and temporary pools of water are not included in this definition. The respondent was also asked if the property is waterfront property and whether the property is on a flood plain.

Building and ground maintenance. Renters were asked their level of satisfaction with the maintenance of the grounds and building in which they live. The responses could be "completely satisfied," "partly satisfied," "dissatisfied," or "landlord not responsible for ground maintenance."

Building neighbor noise. Respondents in multiunit buildings were asked about noise heard through floors, walls, or ceilings of their units. Respondents were also asked about the frequency of noise. The survey also asked the respondents' opinions of the loudness of noise as well as whether it was bothersome or not bothersome.

Buildings. See "Bars on windows of buildings," "Common stairways," "External building conditions," "Year structure built."

Business. See "Income," "Other activities on property," "Rooms."

Cars and trucks available. Included are passenger cars and station wagons owned or regularly used by one or more household members and ordinarily kept at home. Company cars are counted (if used regularly for nonbusiness purposes and kept at home), as are taxicabs (if they are owned by a household member and kept at home). The total number of vehicles is not published, since cars are counted separately from "trucks or vans." In the books, to obtain a count of all units lacking cars specifically, the lines "no cars, trucks, or vans" and "other households without cars" must be added together.

Included are pickups and small panel trucks of one-ton capacity or less, and small vans that are owned or regularly used by one or more members of the household and ordinarily kept at home. Company trucks and vans are included if used regularly for nonbusiness purposes and kept at home. To obtain a count of all units lacking trucks or vans, the lines "no cars, trucks, or vans" and "with cars, no trucks or vans" must be added together.

Except for units falling in the category "no cars, trucks, or vans," all units will fall into two categories. For example, a unit with one car only would fall both in the category "1 car with or without trucks or vans" and "with cars, no trucks or vans."

Census. See "Comparability with Census of Population and Housing data in 1990."

Central cities.

National books and microdata. Since 1985, the National AHS has used the official list of central cities published on June 27, 1983, by the Office of Management and Budget as *OMB Bulletin 83-20*. That list was developed from definitions published January 3, 1980, in the *Federal Register, Volume 45, pages 956-963*. AHS still uses these 1983 boundaries to measure change consistently over time.

Books and microdata. Most metropolitan statistical areas had at least one central city, which was usually its largest city. In addition, any city with at least 250,000 population or at least 100,000 people working within its corporate limits qualified as a central city. Smaller cities were also identified as central cities if they had at least 25,000 population and (1) had at least 75 jobs for each 100 residents who were employed, and (2) 60 percent or fewer of the city's resident workers commuted to jobs outside the city. Finally, in certain smaller metropolitan statistical areas, there were places with between 15,000 and 25,000 population that also qualified as central cities, because they were at least one-third the size of the metropolitan statistical area's largest city and met the two commuting requirements. See also "Places" and "Urban and rural residence."

Change in housing costs. Housing costs include mortgage and rent payment, real estate taxes, insurance, upkeep of place, utilities, homeowner membership fees, land rent, and mobile home park fees. For the householder and those who moved with the householder (from the same place at the same time), comparison is made of the share paid in the previous unit with the share paid in the present residence. The wording in the questionnaire is "their share, if not whole household," so there may be some ambiguity for someone who used to pay 50 percent of \$100 and now pays 50 percent of \$600, but this is intended to count as increased rent.

Choice of present home and home search. These data are shown for units where the respondent moved during the 12 months prior to the interview. The respondent was asked a three-part question on choice of present home: (1) whether the respondent looked at both houses/mobile homes and apartments; (2) the reasons the respondent chose the present house or apartment; and (3) the main reason the present house or apartment was chosen. The distribution for choice of present home may not add to the total, because the respondent was not limited to one response. See "Reasons for leaving previous unit."

Choice of present neighborhood and neighborhood search. These data are shown for units where the respondent moved during the past year. The respondent was asked a three-part question on choice of present neighborhood: (1) whether the respondent looked for a house/apartment in any other neighborhood; (2) the reasons the respondent chose the present neighborhood; and (3) the main reason the present neighborhood was chosen. The distribution for choice of present neighborhood may not add to the total, because the respondent was not limited to one response.

Common stairways. Common stairways are usually used by the occupants and guests to get to the doors of the unit. They may be either inside the structure or attached to the outside of the building. The statistics on common stairways are presented for multiunit structures with two or more floors and common stairways. The figures reflect the physical condition of the stairway: the presence of loose, broken, or missing steps or stair railings.

Commuting. See "Journey to work" and "Neighborhood conditions and neighborhood services."

Comparability with Census of Population and Housing data in 1990. The concepts and definitions are largely the same for items that appear in the *1990 Census of Population and Housing* with the following main exceptions.

In the AHS, recent movers are householders that moved into their unit during the 12 months prior to the interview. In the 1990 Census of Housing, mover households were those that moved between January 1, 1989, and March 31, 1989, a period of 15 months or less.

In the AHS, units are classified as new construction if the unit was constructed 4 years or less from the date of the interview. In the 1990 census, units are classified as new construction if constructed in 1985 through 1990.

Data on poverty level in the 1990 census do not contain the income of household members unrelated to the householder. In the AHS, data on poverty level include the income of all household members whether or not they are related to the householder (see "Poverty status").

Income data in the AHS are based on income for the 12 months prior to interview for those household members 16 years and older. The 1990 census income data are for calendar year 1989 and for income of household members 15 years and older.

Differences between the AHS data and the 1990 census also may be attributed to the method of data collection (mailed questionnaires in the census, personal and telephone interviews in the AHS); differences in processing procedures and sample designs; the sampling variability associated with the sample data from both the AHS and the census; and the nonsampling errors associated with the survey estimates and the census data.

A variety of data on mortgages and owner-occupied properties are presented in the Residential Finance Survey, a specialized study done as part of the 1990 census. Differences include the fact that the basic unit of tabulation in the AHS is the housing unit, and in Residential Finance publications it is the property. Also, all the data in the AHS are provided by the occupant; in Residential Finance publications, mortgage is reconciled with responses from the lender.

Comparability with Current Construction Reports from the Survey of Construction. The U.S. Census Bureau issues several publications under the series title, *Current Construction Reports*. The data for these reports are primarily from the Survey of Construction.

The major difference with the AHS is that the Survey of Construction shows counts and characteristics of housing units in various stages of construction through completion. The AHS shows only counts and characteristics of completed housing. Additional differences may be attributed to factors such as the sampling variability and nonsampling errors of the data from the two surveys, survey procedures and techniques, and processing procedures.

Complete bathrooms. A housing unit is classified as having a complete bathroom if it has a room or adjoining areas with a flush toilet, bathtub or shower, a sink, and hot and cold piped water. A half bathroom has hot and cold piped water and either a flush toilet or a bathtub or shower, but does not have all the facilities for a complete bathroom.

Conditions of streets. The respondent was asked if any of the streets within 300 feet of the sample unit needed major repairs. Major repairs needed include large potholes, badly crumbling or deteriorating shoulders and roadsides, and deep ruts. Minor repairs include small cracks, shallow holes, or missing minor surfacing.

Condominium and cooperative fee. A condominium fee is charged to the owners of the individual condominium unit on a regular basis. The fee covers any operating and maintenance costs of the common property; for example, halls, lobby, parking areas, laundry room, swimming pool, as well as related administrative costs, such as utilities billed communally and management fees.

A cooperative maintenance fee (also called carrying charge) is a fee charged to the owners of the cooperative on a regular basis. It covers a share of the annual amount paid by the cooperative for real estate taxes, mortgage interest, and operating cost. In the books, medians for condominium fees and cooperative fees are rounded to the nearest dollar.

Consolidated metropolitan statistical areas. A consolidated metropolitan statistical area (CMSA) is made up of at least two primary metropolitan statistical areas. The microdata identify specific CMSAs. See Metropolitan areas.

Construction. See "Comparability with Current Construction Reports from the Survey of Construction" and "Year structure built."

Cooling degree days. See "Heating and cooling degree days."

Cooperatives and condominiums. A cooperative is a type of ownership whereby a group of housing units is owned by a corporation of member-owners. Each individual member is entitled to occupy or rent out an individual housing unit and is a shareholder in the corporation that owns the property, but does not own the unit directly. The corporation may have a mortgage on the whole group of units. The member may have a loan or mortgage to buy his or her shares in the corporation.

A condominium is a type of ownership that enables a person to own an apartment or house directly in a project of similarly owned units. The owner's name is on the deed, and the owner may have a mortgage on the unit occupied. The owner also may hold common or joint ownership in some or all common areas such as grounds, hallways, entrances, and elevators. Cooperative or condominium ownership may apply to various types of structures such as single-family houses, rowhouses, and townhouses, as well as apartment units.

Cost and ownership sharing. This item is restricted to owner-occupied housing units. Shared ownership is two or more names on a deed or title. Shared costs include only payments designated for mortgage or utility costs (not taxes or insurance), whether paid directly to a mortgage or utility company, or to household members. Not living here means that one of the people sharing the ownership or costs is not a household member.

Cost. See "Annual taxes paid per \$1,000 value," "Change in housing costs," "Real estate taxes," "Monthly housing costs," "Other housing costs per month," "Mortgages currently on property."

Crime. See Neighborhood crime, a subtopic under: "Neighborhood conditions and neighborhood services."

Crop sales.

National microdata. Data on sales of \$1,000 or more of agricultural products during the 12-month period prior to the interview were collected in rural areas.

Metropolitan microdata. Not applicable.

Current income. Upon completion of the detailed income questions, respondents were asked, "Is your total family income THIS MONTH about the same as it was a year ago?" "About the same" was defined as within 10 percent, or just cost of living adjustments. If the respondent answered "no," a second question was asked, "What do you expect your total family income to be in the NEXT 12 MONTHS?"

Current income for families and primary individuals whose most recent month's income was NOT about the same as a year ago is the "total expected family income in the NEXT 12 MONTHS." The majority of respondents answered "about the same," and their current income is therefore defined as the total income of the family and primary individual in the past year.

Current income is not published separately. It is used in the calculation of "Ratio of value to current income," and "Monthly housing costs as percent of current income." It is felt that respondents who recently entered the job market, retired, changed jobs, or moved often had a previous year's income that is too low or high to compare to housing costs.

Current interest rate. This item refers to the annual percentage rate in effect as of the date of the interview, not the rate when the mortgage was made, nor any imminent changes of which the respondent may be aware. In the books, medians for current interest rate are rounded to the nearest tenth of a percent.

Current total loan as percent of value.

Books. This percentage is computed by dividing the outstanding principal amount by the value of the housing unit. Medians for loan as a percent of value are rounded to the nearest tenth of a percent.

Microdata. Not applicable.

Dependent interviewing. Dependent interviewing is the process by which data from surveys conducted in previous years are used instead of, in addition to, or to verify data collected during the current interview. The first use of dependent interviewing in AHS was for the item "Year structure built" in the year 1984.

Description of area within 300 feet. The respondent was asked to describe the area within a half block (defined as within 300 feet) of the sample unit. The categories include: single-family detached houses, single-family attached houses or low-rise (1-3 story) multiunit buildings, mid-

rise (4-6 story) multiunit buildings, high-rise (7-or-more story) multiunit buildings, and mobile homes.

The category "Commercial and institutional; industrial buildings or factories" includes all varieties of nonresidential structures--offices, banks, hospitals, prisons, pumping stations, water treatment plants, factories, parking garages, churches, hotels, restaurants, barns, and junk yards.

"Residential parking lots" exclude driveways of single-family homes and parking garages where parking is on more than one level. "Body of water" refers to categories such as lakes, ponds, streams, reservoirs, and rivers. Swimming pools and temporary pools of water are excluded.

"Open space, park, woods, farm, or ranch" include cemeteries, golf courses, woods, forest preserves, vacant lots, undeveloped land, airport land, ball fields, and school fields.

Down payment. See "Major source of down payment."

Educational attainment. Data on educational attainment are derived from a question that asks, "What is the highest level of school ... completed or the highest degree ... has received?" The question on educational attainment applied only to progress in "regular" schools. Regular schools include public, private, and parochial elementary and high schools (both junior and senior), colleges, universities, professional, vocational, trade, and business schools. Schooling in other than regular schools is counted only if the credits obtained are regarded as transferable in the regular school system.

The category "high school graduate" included people who received either a high school diploma or the equivalent; for example, passed the Test of General Educational Development \[GED\] and did not attend college. The category "Associate degree" includes people whose highest degree is an associate degree in (1) an occupational program that prepares them for a specific occupation, and the course work may or may not be creditable toward a bachelor's degree or (2) an academic program primarily in the arts and sciences, and the course work is transferable to a bachelor's degree. Some examples of professional degrees include medicine, dentistry, pharmacy, and law.

In the books, to obtain the total number of householders who are high school graduates, add 1) high school graduates (includes equivalency), 2) graduates with some college, no degree, 3) with an associate degree, 4) with a bachelor's degree, and 5) with a graduate degree. To obtain the total number of householder graduates with a bachelor's degree, add (1) with a bachelor's degree and (2) with a graduate or professional degree. The microdata have similar information on other household members aged 14 years and older. See also "Neighborhood conditions and neighborhood services."

Elderly.

Books. Data for elderly include all households with householders aged 65 years and older. Note that this definition is narrower than in Department of Housing and Urban Development housing programs, which count as elderly all households where the householder or spouse is 62 or older, or has a disability.

Microdata. Not applicable; data can be classified at any age.

Electric fuses and circuit breakers. These statistics are presented for occupied housing units. The data show whether an electric fuse has blown or circuit breaker has tripped in the home in the 3 months prior to the interview, or while the household was living in the unit if less than 3 months. A blown fuse or tripped breaker switch results in the temporary loss of electricity until the fuse is replaced or the breaker switch reset. Blown fuses inside major pieces of installed equipment (such as some air conditioners) are counted as blown fuses or tripped breaker switches. The item may identify inadequate wiring, but it also happens commonly when people move into houses and are unfamiliar with which items can be turned on at the same time.

Electricity. See "Monthly costs for electricity and gas."

Elevator on floor. Statistics are shown for housing units in structures with two or more floors that have one or more passenger elevators in working condition on the same floor as the sample unit. Elevators used only for freight are excluded.

Equipment. This item refers to selected equipment that is not shared with other households. Refrigerators, burners, ovens and disposals are counted only if they are in working order or the household plans to have them repaired or replaced soon.

Complete kitchen facilities. A housing unit has complete kitchen facilities when it has all of the following: (1) kitchen sink; (2) burners, cook stove, or microwave oven; and (3) refrigerator. These terms are further defined below.

The same criteria are used for occupied and vacant units in determining complete kitchen facilities. In some areas of the country it is common for the occupant to bring a refrigerator. In these cases the vacant unit, lacking a refrigerator, has an incomplete kitchen.

Kitchen sink. Only a sink in the unit or on an enclosed porch is counted, but it does not matter whether it is in the kitchen. However a bathroom sink does not count as a kitchen sink.

Refrigerator. It may or may not have a freezer. Kerosene refrigerators are counted, but not ice boxes.

Microwave oven. Data for microwave ovens were collected only if the respondent did not report having a cooking stove with oven, or burners. Prior to 1997, the data collected included all types of ovens except toaster ovens.

Burners. Data for burners were collected only if the respondent did not report having a cooking stove with oven. Burners built into a stove or counter top are counted, as are burners in a wood-burning stove.

Cooking stove. The cookstove can be mechanical or wood-burning.

Dishwasher. Counter top dishwashers are not counted.

Washing machine. Any kind with a motor is counted.

Clothes dryer. Only clothes dryers with motors are counted, not hand-operated wringers or hand-turned spin dryers.

Disposal in sink. A disposal is a motorized device that grinds waste so it can flow through the waste water pipe.

Trash compactor. Only built-in motorized trash compactors are counted.

Air conditioning. Air conditioning is defined as the cooling of air by a refrigeration unit; excluded are evaporative coolers, fans, or blowers that are not connected to a refrigeration unit. A room air-conditioning unit is an individual air conditioner that is installed in a window or an outside wall and generally intended to cool one room, although it may sometimes be used to cool several rooms. A central system is a central installation that air conditions the entire housing unit or major portions of it. In an apartment building, a central system may cool all apartments in the building; each apartment may have its own central system; or there may be several systems, each providing central air conditioning for a group of apartments. A central installation with individual room controls is a central air-conditioning system.

External building conditions. The external condition of the building that contains the sample unit was determined by direct questions asked of the respondent. The categories were grouped into the following: roof, walls, windows, and foundation.

Roof. A "sagging roof" is a critical defect indicating continuous neglect, or deep or serious damage to the structure. Only roofs with substantial sagging were included. "Missing roofing material" includes rotted, broken, loose or missing shingles, tiles, slate, shake, and tin, caused by extensive damage from fire, storm, or serious neglect. "Hole in roof" occurs when the missing roof materials expose the interior of the unit directly to weather. Holes caused by construction activity were not counted unless the construction had been abandoned.

Walls. "Missing bricks, siding, other outside wall material" applies to the exterior wall (including chimney) of the structure. Those defects may have been caused by storm, fire, flood, extensive neglect, vandalism, and so forth. Materials may include clapboard siding, shingles, boards, brick, concrete, and stucco. The missing materials do not necessarily expose the interior of the unit directly to weather. Missing materials resulting from construction activity were not counted unless construction had been abandoned. "Sloping outside walls" is a critical defect indicating continuous neglect or serious damage to the structure. Only walls with substantial sagging were included.

Windows. "Boarded-up windows" have been sealed off to protect against weather or entry and include windows and/or doors covered by board, brick, metal, or some other material. "Broken windows" indicate several broken or missing window panes. "Bars on windows" are to protect against unlawful entry. The condition of the windows has no bearing on this item. The bars can be vertical, horizontal, or a metal grating. Windows completely covered with metal sheeting are not included in this category.

Foundation crumbling or has open crack or hole. This category includes large cracks, holes, and rotted, loose, or missing foundation material.

Extra unit. Extra units include units classified as usual residence elsewhere (URE), vacant units designated as occasional use, and seasonal units (excluding migratory). A series of four questions was asked concerning these units.

Reasons for extra unit owned. The following designations for the reason the unit was owned:

- Previous usual residence--never sold the unit after moving from the unit into a new permanent residence
- Recreational purposes--used for vacations, weekends, sports, and holidays, but is not anyone's usual residence
- Current investment purposes--kept currently for investment purposes regardless of why it was obtained originally
- Wishes to sell the property but has not been able to yet--the owner is currently attempting to sell the unit but has not been successful yet
- Inherited--received as an inheritance in the settling of an estate
- Some other reason--used if none of the other designations applied

Location of extra unit. Designates how close the unit is to the owner's current residence.

Nights owner spent at extra unit. Indicates how often the extra unit was used by the owner.

Nights owner rented extra unit. Determines how often the extra unit was used by people other than the owner.

Family or primary individual. While any occupant of a housing unit is called a household member, each household includes either (a) a family, which is the householder and all (one or more) other people living in the same household who are related to the householder by blood, marriage, or adoption, or (b) a *primary individual*, which is a householder who lives alone or with nonrelatives only. In any case the household also may include one or more roommates, lodgers, servants, or other people unrelated to the householder. These are considered members of the household but not of the family.

Married couples related to the householder of a family are included in the family and are not considered as separate families unless they reside in separate living quarters. While they are part of the family, they are also usually a subfamily (see Persons other than spouse or children).

By definition, families include the householder and at least one relative, so in the statistics on household composition, families are always included in the various categories of two-or-more-person households. Primary individuals with nonrelatives living with them also are tabulated as two-or-more-person households. Primary individuals living alone are tabulated as one-person households.

The definition of families and primary individuals is significant in that some income items are collected only for the family or primary individual; these are: source of income, current income, food stamps, savings and investments. (Source of income and amount of wages are, in fact, only for family members 16 years and older.) For other household members 16 years and older, who are not related to the householder, total income is collected for each person, but sources and current changes in income are not identified, and their income is not included in

comparisons with monthly housing costs or value. The distinction is meant to approximate whose income may be available for housing and other shared living expenses. However it is imperfect in the case of roommates who share more or less equally. See also "Household composition."

Farm. See "Crop sales."

First-time owners. If neither the owner nor any co-owner have ever owned or co-owned another home as a usual residence then the housing unit was reported as the first home ever owned. Previous homes purchased solely as vacation homes or homes purchased for commercial rental purposes are not considered usual residences. However, if a previously owned home was originally purchased as a usual residence and later used as a vacation home or for commercial or rental purposes, the owner is not a first-time owner.

Flush toilet and flush toilet breakdowns. A privy or chemical toilet is not considered a flush toilet. Flush toilets outside the unit were not counted. The statistics on breakdowns of flush toilet are shown for housing units with at least one flush toilet for the household's use only. The flush toilet may be completely unusable because of a faulty flushing mechanism, broken pipes, stopped up sewer pipe, lack of water supplied to the flush toilet, or some other reason. For households with more than one toilet, the question asked about times when all toilets were unusable.

Food stamps. These data are restricted to families and primary individuals with total incomes of \$25,000 per year or less. Housing units are counted in these data if the householder or any relative currently living in the unit received food stamps in the past year, even at another address. Food stamps are government issued coupons that can be used to purchase food. The food stamp program is a joint federal-state program that is administered by the U.S. Department of Agriculture, state and local governments.

Foundation. This item is restricted to one-unit buildings and excludes mobile homes. A structure has a basement if there is enclosed space at least partially underground in which a person can walk upright under all or part of the building. The basement is under all the building if it is under the entire main structure, excluding garages, carports, and porches. Crawl space is space between the ground and the first floor of the house, but it is not high enough for a person to walk upright. A house is built on a concrete slab if it is built on concrete that has been poured on the ground. The "other" category refers to a house built on stilts or pilings (for example, beach houses), boats, and motor homes.

Fuels. Electricity may be supplied by above- or underground electric power lines or generated at the housing unit. Piped gas is gas piped through underground pipes from a central system to serve the neighborhood. Bottled gas is pressurized gas stored in tanks or bottles that are filled or exchanged when empty. Fuel oil is heating oil normally supplied by truck to a storage tank for use by the heating system. Kerosene or other liquid fuel includes kerosene, gasoline, alcohol, and other similar combustible liquids. Coal or coke is usually delivered by truck. Wood refers to the use of wood or wood charcoal as a fuel. Solar energy refers to the use of energy available from sunlight as a heating fuel source. Other includes briquettes made of pitch and sawdust, coal dust, waste material like corncobs, purchased steam, or any other fuel not listed.

Fuels, other house heating. These are the same types of fuels mentioned above but use in addition and/or supplementing the main house heating fuel.

Gas. See "Monthly cost for electricity and gas."

Group quarters. See "Housing units."

Halls. See "Light fixtures in public halls."

Heating and cooling degree days.

National books and microdata. Each degree that the average temperature for a day is below 65 degrees Fahrenheit produces one *heating degree day (HDD)*. For example, if the maximum temperature is 70 degrees F and the minimum temperature is 52 degrees F, the average temperature for the day is 61 degrees, resulting in four heating degree days. A day when the average temperature is 65 or more has zero heating degree days.

Each degree that the average temperature for a day is above 65 degrees Fahrenheit produces one *cooling degree day (CDD)*. For example, if the maximum temperature is 80 degrees F and the minimum temperature is 62 degrees F, the average temperature for the day is 71 degrees, resulting in six cooling degree days. A day when the average temperature is 65 or less has zero cooling degree days.

The National Oceanic and Atmospheric Administration (NOAA) provided the information on degree days, based on averages for 1951-80. Each sample unit was assigned heating and cooling degree days using average NOAA data for counties.

Metropolitan books and microdata. Not applicable.

Heating equipment. Data are shown for the main heating equipment and other heating equipment used in addition to the main heating equipment. More than one category of "Other heating equipment" could be reported for the same household. Only one type of equipment was reported as the "Main heating equipment."

Warm-air furnace refers to a central system that provides warm air through ducts leading to various rooms.

Steam or hot water system refers to a central heating system in which heat from steam or hot water is delivered through radiators or other outlets. It also includes solar heated hot water that is circulated throughout the home.

Electric heat pump refers to a heating and cooling system that utilizes indoor and outdoor coils, a compressor, and a refrigerant to pump in heat during the winter and pump out heat during the summer. Only heat pumps that are centrally installed with ducts to the rooms are included in this category. Others are included in wall units.

Built-in electric units refer to units permanently installed in floors, walls, ceilings, or baseboards.

Floor, wall, or other built-in hot-air unit without ducts delivers warm air to the room right above the furnace or to the room(s) on one or both sides of the wall in which the furnace is installed.

Room heater with flue refers to nonportable room heaters in the wall or free standing heaters that burn liquid fuel, and which are connected to a flue, vent, or chimney to remove smoke and fumes.

Room heater without flue refers to any room heater that burns kerosene, gas, or oil, and that does not connect to flue, vent, or chimney.

Portable electric heater refers to heaters that receive current from an electrical wall outlet.

Fireplaces with inserts have a fan-forced air circulation system to force the heat into the room.

Fireplaces without inserts refers to glass door fire screens or fire backs inserted in the back of the fireplace to passively reflect heat.

Cooking stove refers to gas or electric ranges or stoves originally manufactured to cook food.

Stove refers to any range or stove that burns solid fuel including wood burning, pot belly, and Franklin stoves.

Other includes any heating equipment that does not fit the definition for any of the previous definitions.

Heating equipment breakdowns. Statistics are shown for housing units occupied by the householder during the winter prior to the interview and refer only to the main heating equipment. The data are classified by whether the housing unit was uncomfortably cold for 24 hours or more, the number of times equipment breakdowns occurred lasting 6 hours or more, and causes for the breakdowns.

The heating equipment is broken down if it is not providing heat at its normal heating capacity through some fault in the equipment. Utility interruptions occur when there is a cutoff in the gas, electricity, or other fuel supplying the heat. Inadequate heating capacity refers to heating equipment that is providing heat at its normal capacity, but the housing unit is still too cold for the occupants. Inadequate insulation refers to air drafts through window frames, electrical outlets, or walls that are cold. Cost of heating refers to the occupants turning down their thermostat or turning the equipment off altogether to save money. This category includes utilities/fuels that are unavailable due to unpaid bills.

Hispanic. "Hispanic" refers to the origin of the householder, and was determined by asking respondents to identify people living in the unit who were Hispanic or Spanish American. There is no intent to include people of Brazilian or Portuguese ancestry. Hispanic people may be of any race. Most identify themselves as White or Black, as shown in Table 2-1.

Data on Hispanic households shown in the AHS are collected in the 50 states and the District of Columbia and therefore do not include households living in Puerto Rico.

Home equity loan. Households were asked how many home equity loans they have. Home equity loans include both revolving lines of credit and lump sums loans with a fixed repayment schedule. The respondent was not given a definition to distinguish between these and most other mortgages. However reverse annuity mortgages were defined first and excluded. Respondents were asked if each home equity loan was a line of credit or lump sum, the credit limit, current balance, the amount of last payment, and the interest rate.

Homes currently for sale or rent. The data are presented in the book for owner-occupied units, year-round units temporarily occupied by people who have a usual residence elsewhere, and vacant units. The classification of the unit refers to the current action of the owner. The owner may offer the unit *up for rent only*, *up for rent or for sale*, or *for sale only*. In addition, the current owner may have contracted to rent or sell the unit but the transfer has not yet taken place. Finally, the housing unit may be *not on the market* at all.

Household. A household consists of all people who occupy a particular housing unit as their usual residence, or who live there at the time of the interview and have no usual residence elsewhere. The usual residence is the place where the person lives and sleeps most of the time. This place is not necessarily the same as a legal residence, voting residence, or domicile.

Households include not only occupants related to the householder but also any lodgers, roomers, boarders, partners, wards, foster children, and resident employees who share the living quarters of the householder. It includes people temporarily away for reasons such as visiting, traveling in connection with their jobs, attending school, in general hospitals, and in other temporary locations.

By definition, the count of households is the same as the count of occupied housing units.

Householder. The householder is the first household member listed on the questionnaire who is an owner or renter of the sample unit and is aged 18 years or older. An owner is a person whose name is on the deed, mortgage, or contract to purchase. A renter is a person whose name is on the lease; if there is no lease, a renter is a person responsible for paying the rent. If no one meets the full criteria, the age requirement is relaxed before the owner/renter requirement. Where the respondent is one of several unrelated people who all could meet the criteria, the interviewer may list the respondent first, so the respondent will be the householder and can answer the questions that are asked specifically about the householder, such as data on moves and income sources.

Household composition.

Books. The following categories are published in the books.

Married-couple families. Each household in this group includes the householder and spouse, and other people, if any, who are related to the householder and live in the household. If the householder's spouse is not present, but another married couple is present, for example daughter and son-in-law or mother- and father-in-law, the household is not counted here as a married-couple family.

Other male householder. This category includes households with male householders who are widowed, divorced, separated or single, or who are married with wife absent for other reasons.

Other female householder. This category includes households with female householders who are widowed, divorced, separated or single, or who are married with husband absent for other reasons.

No nonrelatives. When this phrase modifies Married-couple households, then households that include householder, spouse, nonrelatives, and other relatives, if any, are included with Other male and Other female householder, rather than with Married-couples, no nonrelatives. The data are published both ways, in the data tables, so readers can see whether their findings are affected by the presence of nonrelatives with married couples.

Single children under 18 years old. This category includes all household members under 18 years, whether related to the householder or not, who are not currently married (that is they have never been married, or are divorced, separated, or widowed). For example, it includes currently unmarried children of lodgers and foster children.

Own never-married children. This category includes any household member under 18 years old, if he or she has never been married, and is a son, daughter, stepchild, or adopted child of the householder. By definition, children of subfamilies are not children of the householder, so they are excluded from this count of own children. The data are published for both this definition of children and the definition above (based on age and current marital status), in different stub items, so readers can see whether the definition of children affects their findings.

Microdata. Not applicable; researchers may calculate these and other categories from the data on each person.

See also "Persons other than spouse or children" and "Family or primary individual."

Household moves and formation.

Books. Data are shown for households that moved into the present unit during the 12 months prior to the date of the interview. The distribution is further classified by (1) whether the household moved together from the same unit, from two or more units, or moved at separate times, and (2) if previous householder(s) moved into the present unit.

The total does not measure net household formation, since it omits deaths, moves to institutions, and moves abroad, and it does not show whether all occupants of the previous unit moved here; some may have stayed there, or moved elsewhere.

The categories do indicate people moving out of units where they were not the householder (divorce or children setting out on their own.), and people moving in with others (marriage, roommates, children moving from one parent to another, or to a grandparent).

Microdata. Not applicable; researchers may calculate these and other categories from the data on each person.

Housing units. A housing unit is a house, apartment, group of rooms, or single room occupied or intended for occupancy as separate living quarters.

Living quarters is a general term that includes both housing units and group quarters. Living quarters include structures intended for residential use (such as a house, apartment building, boarding house, or mobile home). Living quarters also include the following, but only if they are occupied as usual residences: (a) places such as tents, caves, boats, and railroad cars; and (b) structures intended for nonresidential use (such as rooms in a warehouse where a guard lives). Living quarters exclude quarters being used entirely for nonresidential purposes, such as a store, an office, or quarters used for storing business supplies, machinery, or agricultural products.

Separate living quarters are those in which the occupants live and eat separately from any other people in the structure and that have direct access from the outside of the structure or through a common hall, lobby, or vestibule that is used or intended for use by the occupants of more than one unit or by the general public. This means that the hall, lobby, or vestibule is not part of any unit but must be clearly separate from all units in the structure. For vacant units, the criteria of separateness and direct access are applied to the intended occupants whenever possible. If the information cannot be obtained, the criteria are applied to the previous occupants.

Group quarters. The following types of living quarters are not classified as housing units and are not covered by the AHS interviews (some are in the microdata as Noninterviews):

Institutional group quarters are living quarters occupied by one or more people under care or custody, such as children in an orphanage, people in a nursing home, and prisoners in a penitentiary.

Noninstitutional group quarters do not involve care or custody, and do not have separate living. They include college dormitories, fraternity and sorority houses, nurses' dormitories, and congregate housing for the elderly. In addition, *noninstitutional group quarters* include any living quarters that are occupied by nine or more people unrelated to the householder.

Note that institutional and commercial establishments that have single-family houses or individual apartments with direct access, where staff live and eat separately, such as some residential hotels, and units for college professors, are *housing units*. Military housing for singles is not covered, but housing where civilian family members live is, if it meets the definition of a housing unit.

Hotels. Occupied rooms or suites of rooms in hotels, motels, and similar places are classified as housing units only when occupied by permanent residents; that is, people who consider the hotel as their usual residence or have no usual residence elsewhere. Vacant rooms or suites of rooms are classified as housing units only in those hotels, motels, and similar places in which 75 percent or more of the accommodations are occupied by permanent residents.

Rooming houses. If any of the occupants in a rooming or boarding house live and eat separately from everyone else in the building and have direct access, their quarters are classified as separate housing units. The remaining quarters are combined. If the combined quarters contain

eight or fewer roomers unrelated to the householder, or a person in charge, they are counted as *one housing unit*. Otherwise they are *noninstitutional group quarters*.

New housing units. Units being built are classified as housing units (though they may be vacant), if construction has reached a point where all exterior windows and doors are installed and final usable floors are in place. Note this stage of construction is earlier than the one used in *Duration of vacancy* (see *Vacancy, seasonality, and marketing*), which measures when construction was completed.

The occupants of each housing unit may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living arrangements (up to the limit of eight people unrelated to the householder).

Both occupied and vacant units are counted, except that the following are excluded if they are vacant: (a) tents, caves, boats, railroad cars, and the like; (b) structures intended for nonresidential use; (c) units used for business storage (storage of personal furniture does not disqualify a unit); and (d) units unfit for human habitation (roof, walls, windows, or doors no longer protect the interior from weather, or there is positive evidence such as a sign on the house or block that the unit is to be demolished or is condemned).

Income. The survey covers total money income in the 12 months before the interview. It covers people age 16 and older (age 14 and older before 1999) currently living in the housing unit, even if they lived elsewhere during some of the previous 12 months. The figures represent the amount of income before any deductions such as taxes, Social Security, union dues, bonds, and insurance.

The figures exclude: capital gains; lump sum payments from inheritances or insurance; occasional gifts; other sporadic payments; money borrowed; tax refunds; withdrawal of bank deposits; accrued interest on uncashed savings bonds; payments between household members except wages in a family business; income "in kind" such as free living quarters, housing subsidies, food stamps, or food produced and consumed in the home; and money from the sale of property (unless the recipient was in the business of selling such property). Figures also exclude income of people who have died or moved out of the housing unit, even if they lived in it for part of the previous 12 months.

Most data are from the respondent's replies. For people not related to the householder, the interviewer tries to ask them directly about their income, but if they are not available, the interviewer asks the respondent. Medians for income are rounded to the nearest hundred dollars.

Figures are shown separately for household income and income of families and primary individuals (see definition). Each has its own advantages. Only household income includes the income of lodgers, roommates, employees, and other household members who are not related to the householder.

Wages and salaries include income received for work performed as an employee. It includes wages, salary, piece-rate payments, commissions, tips, cash bonuses, and Armed Forces pay, but not pay that a business owner pays to herself or himself.

Business, farm, or ranch income is received from self-employment in a business, professional practice, partnership, or farm.

Social Security and pensions include pensions, survivors' benefits, and disability payments. This is not intended to include Supplemental Security Income (SSI), which is grouped with welfare, but many respondents confuse SSI and Social Security. Both come from the Social Security Administration. They used to be issued on different colored checks to minimize confusion, but now most payments are sent by electronic deposit.

Interest is money received or credited to a person's account for the use of money. Notes, bonds, deposits in banks, credit unions, savings and loan associations, money market accounts, and certificates of deposit (CDs) are the most common sources of interest.

Stock dividends are payments made by a corporation to its stockholders. These include periodic payments from an estate or trust fund, and dividends paid or credited to those who hold shares in a mutual fund.

Rental income includes the total money received from rental of property, rental from real estate, or from roomers or boarders, less all rental expenses.

Welfare or SSI includes the Supplemental Security Income Program (SSI), which is administered by the Social Security Administration, and replaces most public assistance payments that were previously made by state and local welfare agencies to low income aged, blind, and disabled persons. Welfare includes money received from local or state administered public assistance programs, old-age assistance, aid to families with dependent children (AFDC, ADC), aid to the blind or totally disabled, or other public assistance.

Alimony or child support includes as alimony, money received periodically from a former spouse after a divorce or legal separation. Child support is money received for the support of children not living with their father/mother as the result of a legal separation.

Other includes worker's compensation or other disability payments, unemployment compensation, veteran's payments, total amount that parents receive for the care of foster children in their home, money received from gambling, scholarship and fellowship money received by students for which no service or work was required, military reenlistment bonuses, and any other sources of money income not specified above.

There may be significant differences in the income data between the AHS and other surveys and censuses. For example, the time period for income data in the AHS is the 12 months prior to the interview, while other income data generally refer to the calendar year prior to the date of the interview. Additional differences in the income data may be attributed to how income questions are asked, levels of missing data (usually high on questions about income), whether missing data are estimated or ignored, sampling variability, and nonsampling errors.

Inside (P)MSAs. See "Metropolitan areas."

Insurance. See "Property insurance."

Interest. See "Current interest rate."

Items included in primary mortgage payment. The respondent was asked to indicate which items were included in the monthly mortgage payment besides principal and interest. These items included property taxes, property insurance, and other charges. Other charges may include disability insurance or life insurance.

Journey to work. National books and microdata. The books publish data on householders. The microdata have similar information on all workers.

Workers. Include all people aged 14 years and older who held a job in the United States, any time the week before the interview.

Householders. Householders who worked last week include householders who reported having a job in the United States, any time the week before the interview.

Principal means of transportation to work last week. This refers to the principal mode of travel used to get from home to work. People who use different means of transportation on different days of the week were asked to specify the one used most often. People who use more than one means of transportation to get to work each day were asked to specify the one used for the longest distance during the trip to work. Public transportation refers to bus, streetcar, subway, or elevated trains. Other means include taxicabs, ferryboats, surface trains, van service. See also "Neighborhood conditions and neighborhood services."

Travel time from home to work. The total elapsed time in minutes reported to usually get from home to work during the week prior to interview was counted as the travel time to work. The elapsed time included time spent waiting for public transportation and picking up members of carpools. Respondents were instructed to report travel time to the nearest minute.

No fixed place to work. Workers with no fixed place of work were those who did not usually work at the same location each day and did not usually report in to a central location to begin work each day.

Distance from home to work. This was the usual one-way, "door-to-door" distance in miles from home to work during the week prior to interview. Respondents were instructed to report travel rounded to the nearest mile.

Departure time to work. Refers to the time (hour and minutes) the respondent left for work. The categories begin with midnight, 12:00 a.m., and progress to 11:59 p.m. Metropolitan books and microdata. Not applicable.

Kitchen. See "Equipment."

Last used as a permanent residence. See "Vacancy, seasonality, and marketing."

Lenders of primary and secondary mortgage. This item is presented for units with two or more mortgages. The data are classified by whether the money was borrowed from a firm (bank

or other organization), the seller of the property, or from another individual. Other organizations consist of mortgage corporations, pension plans, credit unions, and savings and loan associations. *Other individual(s)* includes anyone who was not the most recent owner.

Light fixtures in public halls. These statistics are presented for housing units in two-or-more-unit structures. Data include whether or not there are light fixtures in the public halls and whether or not some, none, or all of the light fixtures are in working order. Light fixtures include wall lights, ceiling lights, or table lamps in the public halls of the building. Public halls are used by the occupants and guests to get to their apartment doors.

Living quarters. See "Housing units."

Location of previous unit. Books show data for units in which the householder moved during the 12 months prior to the interview. Microdata show similar information for moves since the previous interview, or for the past 2 years for units added to the sample.

The data compare metropolitan areas of the previous residence and the residence in the AHS sample, where the interview was conducted. The AHS residence is coded by its 1983 metropolitan area definition (see Metropolitan areas), which may not be the current area definition. Since 1993, coding the previous residence with comparable 1983 boundaries has not been done because of geographic boundary changes. Therefore, this item has been suppressed to avoid spurious changes.

Lodgers. See "Household," "Persons other than spouse or children," "Rent paid by lodgers."

Lot size. Lot size includes all connecting land that is owned or rented with the home. Excluded are two-or-more-unit buildings and two-or-more-unit mobile homes. In the books, median lot size is shown to hundredths of an acre.

Lower cost state and local mortgages. Data are shown for owner occupied units with one or more mortgages. These are loans generally 1 percent to 3 percent below the current mortgage interest rate at the time the loan was made. The loans are managed through state or local governments. Excluded are federally funded programs of the Veterans Administration and Farmers Home Administration.

Major source of down payment. This item refers to the source of the cash used for down payment or outright purchase of the property (house or lot). If more than one source applied, the one providing the largest amount was recorded. Sale of previous home was reported only if the previous home was sold during the 12-months preceding the acquisition of the present home. Savings, or cash on hand, includes money drawn as bank deposits, credit unions, share accounts, saving bonds, certificates of deposits (CDs), money market funds, and IRA or KEOGH accounts. Sale of other investment includes the sale of other real property or real estate other than the previous home or from the sale of other investments such as stocks, bonds, mutual funds, dissolved business ventures. Borrowing other than a mortgage on this property was reported if the present owner borrowed the down payment, even if the property was mortgaged.

Money received as a gift regardless of the source was categorized *inheritance or gift*. Land where building built used for financing means the land on which the structure was built was used as the present owner's equity in the property. Sources of down payment that do not fit any of the above categories were recorded in the *other* category.

Manager. See "Owner or manager on property."

Medians.

Books. We estimate each median from the printed distribution. For example if there are 12 million homes of a particular type, the median is the 6 millionth, or halfway point of these homes. Therefore, if 5 million homes are below \$400 rent, then the median is the millionth home above \$400. Finally, if the next interval printed in the book (from \$400 to \$449), has 3 million homes, the median is assumed to be one-third of the way through the interval (at \$417).

This technique overestimates medians by a few percent, because most homes cluster at the bottom of their intervals. The clustering happens because landlords ask for rent in round numbers, like \$400, and people give answers in round numbers, like \$20,000 income, or 40 years old.

We do not show the median at all if the distribution is estimated to have fewer than 25 sample cases (50,000 homes in the national books).

Microdata. Not applicable; no medians are shown in the public use file.

Median monthly housing costs for owners.

Books. In addition to the median for "Monthly housing costs," this item gives two additional medians for *owner-occupied units*. The first median includes maintenance costs in addition to those items included in "Monthly housing costs." The second median excludes second and subsequent mortgages, installment loans or contracts, and maintenance costs, but includes all remaining items listed in "Monthly housing costs." Because neither of these medians includes costs for renter-occupied units, they are not comparable to the median presented in "Monthly housing costs," except in the "Owners column" and the "Owners" chapter.

Microdata. Not applicable.

Metropolitan areas. Metropolitan areas are made up of whole counties (towns in New England) that have significant levels of commuting and contiguous urban areas in common. They may cross state lines, and usually include large amounts of rural land and farm land, provided the county or town as a whole qualifies. See also Central cities; Places; and Urban, which is based on much higher population density than metropolitan areas.

National books and microdata. Since 1985 the National AHS has used the official list of metropolitan areas published on June 27, 1983, by the Office of Management and Budget as OMB Bulletin 83-20. That list was developed from definitions published January 3, 1980, in the *Federal Register, Volume 45, pages 956-963*. AHS still uses these 1983 boundaries in order to measure change consistently over time.

National microdata identify parts of many metropolitan areas. The sample size is usually too small for analysis, but researchers may group the areas, for example, by growth rate, turnover rate, and size, to have enough cases in each group to analyze. For six broad areas, containing a total of 18 metropolitan area codes (shown in *Codebook for the American Housing Survey, Volume 2 or 3*), the sample sizes have been augmented to permit analysis: Chicago, Detroit, Los Angeles, New York, Northern New Jersey, and Philadelphia. Elsewhere, metropolitan area codes are shown for (a) central cities of a metropolitan area where they had total 1980 population of 100,000 or more, and (b) urbanized suburbs of a metropolitan area where they had total 1980 population of 100,000 or more. In some areas, only central cities or only suburbs met the cutoff, so only those sample cases show metropolitan codes. Other sample cases show 9999 as their metropolitan code. This suppression for confidentiality does not affect the printed books.

Metropolitan books and microdata. Since 1995 the metropolitan AHS has used HUD definitions of metropolitan areas. These are based on the definitions of the Office of Management and Budget, but some outlying areas are omitted from the HUD definitions. Those counties have enough commuting to meet the OMB definition, but HUD believes they are not part of the same housing market as the rest of the area and need to be omitted for housing analysis. The areas for a given year included in and excluded from each metropolitan area are listed in the front of the books for that year.

Mobile homes. A mobile home is defined as a housing unit that was originally constructed to be towed on its own chassis. It also may have permanent rooms attached at its present site, or other structural modifications. The term does not include prefabricated buildings, modular homes, travel campers, boats, or self-propelled vehicles like motor homes. Some people use the terms trailer or manufactured housing in the same sense as mobile homes.

Mobile homes in group. Mobile homes or mobile home sites gathered close together are considered to be in a "group." This may be a mobile home park or it may be a number grouped together on adjacent individually owned lots but not in a mobile home park. See also "Site placement."

Monthly costs paid for electricity and piped gas. Three separate procedures are used to estimate monthly costs of electricity and gas. All respondents are asked if they have records available showing their costs for electricity (or gas) separate from other utilities. If they respond "yes," they are asked the amount of their electric (or gas) bill for the most recent months of January, April, August, and December. These months are the best predictors of annual costs. On average, more than one-third of respondents provide answers for at least 1 of the 4 months.

If the respondent provides data for only 1 month, the first procedure is used. The data for the month are adjusted using regression formulas to estimate yearly costs that are then divided by 12. These formulas are modeled after the results of the Residential Energy Consumption Survey (RECS) sponsored by the United States Department of Energy. These formulas take into account the following characteristics of the unit: electric water heating, natural gas water heating, year built, type of unit, number of rooms, number of bathrooms, number of appliances, and number of household members.

If the respondent provides data for 2, 3, or 4 months, the second procedure is used. As with the first procedure, the monthly data are adjusted using regression formulas, modeled after the results of RECS, to estimate yearly costs that are then divided by 12. Because more than 1 month's worth of real costs are available, it is not necessary to take into account detailed characteristics of the unit as is done in procedure one.

If the respondent answers "no," that he or she does not have separate records for the electricity (or gas), the third procedure is used. The respondent is asked to provide an estimate of the average monthly costs. A factor is then applied that, in effect, lowers these costs to make them consistent with electricity and gas costs in RECS.

Monthly expenses, additional help with.

Books. Not applicable.

Microdata. Additional questions are asked of renters when the ratio of monthly housing costs as percent of current income is high. Rental households receiving housing assistance that report spending more than 35 percent of their income on housing; or rental households not receiving housing assistance with incomes less than \$15,000 that report spending more than 50 percent of their income on housing were asked questions on assistance for food, clothing, car payments, tolls, public transportation, child care, medical care or medicine, and utility bills. They were asked to specify the type of help they received.

Monthly housing costs. The data are presented for owner-occupied and renter-occupied housing units.

Monthly housing costs for *owner-occupied units* include the sum of monthly payments for all mortgages or installment loans or contracts, except reverse annuity mortgages and home equity lines of credit. Costs also include real estate taxes (including taxes on mobile homes, and mobile home sites if the site is owned), property insurance, homeowner association fees, cooperative or condominium fees, mobile home park fees, land rent, utilities. Costs do not include maintenance and repairs, but see "Median monthly housing costs for owners."

Monthly housing costs for *renter occupied housing* units include the contract rent, utilities, property insurance, mobile home park fee. Renter housing units occupied without payment of cash rent are shown separately as no cash rent. For rental units subsidized by a housing authority, the federal government, or state or local governments, the monthly rental costs reflect only the portion paid by the household and not the portion subsidized. The figures do not adjust for lost security deposits, or the benefit of free rent offered by some owners.

The term utilities here includes electricity, gas, fuels (oil, coal, kerosene, or wood.), water, sewage disposal, garbage and trash collection, but not telephones or cable television. Utility costs are counted if they are paid by the occupant or by someone else, such as a relative, welfare agency, or friend. They may be paid separately or included in rent, condominium fee, or mobile home park fee, and the AHS questions take care to avoid double-counting.

Specified owners and renters)-In the books, Table 19 of each chapter presents financial characteristics for these groups, which are comparable to the costs published before 1984. Medians for monthly housing costs are rounded to the nearest dollar.

Monthly housing costs as percent of current income.

Books. The yearly housing costs (monthly housing costs multiplied by 12) are expressed as a percentage of the total Current income (see definition). The percentage was computed separately for each unit and rounded to the nearest percent, so 25 to 29 percent means 24.5 to 29.49 percent. The percentage was not computed for units where occupants reported no income, a net loss, or no cash rent. The category 100 percent or more counts units with housing costs exceeding income. This situation may mean inaccurate income or housing costs data, or true but temporary situations. For most purposes, readers may wish to treat this line as missing or unreliable data.

Microdata. Not applicable; may be calculated as needed.

Monthly payment for principal and interest. The data present the monthly dollar amount paid on the mortgage for principal and interest only. They do not include that portion of the monthly payment used for property taxes, homeowner insurance, and/or other charges. In the books, medians for monthly payment for principal and for interest are rounded to the nearest dollar.

Mortgage origination. Data are shown for owner-occupied units with one or more mortgages. For units that placed new mortgages, data are classified by the date the new mortgage was obtained in relation to the date the property was acquired. An assumed mortgage indicates that the current owner assumed the previous owner's when the property was acquired and has not been refinanced. A wrap-around mortgage is a mortgage with a face value that encompasses the unpaid balance of the first mortgage(s), plus the amount of any new funds extended by the wrap-around lender. Combination of the above means that there was more than one method of origination for the outstanding mortgages on the property.

Mortgages currently on property.

Books. The owner or the owner's spouse was asked the number of mortgages or similar loans (including home equity loans) currently in effect on the home. Data are shown for the number of units with the following mortgage categories: reverse mortgages, regular and home equity, regular only, and home equity only.

A mortgage or similar debt refers to all forms of debt for which the property is pledged as security for payment of the debt. It includes such debt instruments as deeds of trust, trust deeds, mortgage bonds, and vendors' liens. In trust arrangements usually a third party, known as the trustee, holds the title to the property until the debt is paid. In vendors' lien arrangements, the title is kept by the buyer but the seller (vendor) reserves, in the deed to the buyer, a lien on the property to secure payment of the balance of the purchase price. Also included as a mortgage or similar debt are contracts to purchase, land contracts, and lease-purchase agreements where the title to the property remains with the seller until the agreed upon payments have been made by the buyer.

See also "Current interest rate," "Items included in primary mortgage payment," "Lenders of primary and secondary mortgage," "Lower cost state and local mortgages," "Major source of downpayment," "Monthly payment for principal and interest," "Primary mortgage," "Remaining years mortgaged," "Term of primary mortgage at origination or assumption," "Total outstanding principal amount," "Type of primary mortgage," "Year primary mortgage originated."

Microdata. Not applicable. May be recoded as needed.

Moves. See "Choice of present home and home search," "Household moves and formation," "Location of previous unit," "Persons--previous residence," "Present and previous units," "Reasons for leaving previous unit," "Recent movers comparison to previous home," "Structure type of previous residence," "Tenure of previous unit," "Year householder moved into unit."

Neighborhood conditions and neighborhood services. The statistics are based on the respondent's opinion. He or she may define the neighborhood as any size. Some topics are collected by an open-ended question on what, if anything, bothers the respondent about the neighborhood. Others come from questions about specific topics. The first three, and schools, have followup questions about whether the problem bothers the respondent so much he or she would like to move.

Street noise or heavy street traffic. Street noise refers to noise made by children playing outdoors, noise from a factory or business, or any other sounds that the respondent considers to be street noise. Traffic refers to the amount of vehicular traffic that the respondent considers "heavy."

Neighborhood crime. This category refers to all forms of street and neighborhood crime, such as petty theft, assaults against the person, burglary, or any related activities that the respondent judges to be a crime.

Odors. This category refers to smoke, gas, or bad smells.

Those three specific questions are followed by an open-ended question about what (else) bothers the respondent. The category "People" includes such complaints as unfriendly neighbors, noisy children, other races, or specific neighbors.

Public transportation. The respondent answers (1) if service is available; (2) if service is satisfactory; and (3) if any member of the household uses the service at least once a week.

Shopping. The respondent answers whether grocery stores or drug stores were satisfactory and were within 1 mile of the housing unit.

Police protection. The respondent was asked if police protection was satisfactory.

Elementary schools. The respondent was asked (1) if young children in the household attended public school, private school, preschool, or were schooled at home (does not attend school before 1999); (2) if the public elementary school was satisfactory; (3) if it was so unsatisfactory the respondent wants to move; and (4) if the public elementary school was within 1 mile of the housing unit. See also Educational attainment.

See also "Bars on windows of buildings," "Conditions of streets," "Description of area within 300 feet," "Educational attainment," "Other buildings vandalized or within interior exposed," "Overall opinion of neighborhood," "Trash, litter, or junk on streets or any properties."

Noninterview.

Books. Not applicable.

Microdata. Noninterview cases are classified as Type A, Type B, or Type C.

Type A noninterviews are units occupied by people eligible for interview who were not interviewed. A noninterview means that valuable information was lost and the sample returns may not be representative of the population. It is very important to keep noninterviews to a minimum. Type A noninterview categories include (1) no one home; (2) temporarily absent; (3) refused; (4) unable to locate; (5) language problems; and (6) other occupied - specify.

Type B noninterviews are units not eligible for interview at present, but who could become eligible for interviews in the future. Type B noninterview categories include (1) permit granted, construction not started; (2) under construction, not ready; (3) permanent or temporary business or commercial storage; (4) unoccupied site for mobile home or tent; (5) other unit or converted to institutional unit; (6) occupancy prohibited; (7) interior exposed to the elements; (8) Type B, not classified.

Type C noninterviews are units ineligible for sample, either because they no longer exist or because of sample reasons. Type C noninterview categories include: (1) demolished or disaster loss; (2) house or mobile home moved; (3) unit eliminated in structural conversion; (4) merged, not in current sample; (5) permit abandoned; (6) Type C not classified elsewhere; and (7) unit eliminated in subsampling.

Number of single children under 18 years old. See "Household composition."

Occupied housing units. A housing unit is classified as occupied if there is at least one person who lives in the unit as a usual resident at the time of the interview, or if the occupants are only temporarily absent, for example, on vacation. However, if the unit is occupied entirely by people with a usual residence elsewhere, the unit is classified as vacant. By definition, the count of occupied housing units is the same as the count of households.

Other activities on property. Data presented exclude rental units. Property consists of one or more tracts of land that the respondent considers to be the same property, farm, ranch, estate. The tracts may be adjoining or they may be separated by a road, creek, or other piece of land. For a condominium, this item refers to the sample unit only.

A medical or dental office is a doctor's or dentist's office regularly visited by patients.

A commercial establishment may be located in the same building as the sample unit, or it may be located elsewhere on the property (such as grocery store, restaurant, gasoline station, and veterinary office). Those housing units that have no recognizable alterations to the outside of

the house are not considered as having a commercial establishment. A farm is not classified as a commercial establishment.

Other buildings vandalized or with interior exposed. The respondent was asked if there were any vandalized or abandoned buildings within 300 feet of the sample unit. A unit is counted as vandalized if it has most of the visible windows broken, doors pulled off, has been badly burned, has words or symbols printed on it, has portions of the roof missing, or in some other way has the interior exposed to weather.

Other housing costs per month. A homeowners' association fee (excludes condominium and cooperative fees) is a fee charged for services such as upkeep of common property (painting hallways, cleaning lobbies, mowing lawns, repairing laundry facilities, paving parking areas, and repairing street lights). The fee may include the use and maintenance of either indoor or outdoor swimming facilities or other recreational facilities (party rooms, tennis courts, basketball courts, exercise rooms, and playground areas). Also the homeowner's association fee can include payments for security personnel such as security guards or services such as telephone answering service, maid service, or other domestic help.

Mobile home park fees are regular payments to the park management that could include site rental, utility charges, mail handling, and/or fees for the maintenance of common areas.

Aside from mobile homes (where site rent is covered above in mobile home park fees), in a few areas of the country, occupants may own the unit, but not the land on which it stands. Land rent refers to land that is rented or leased from the land owner, and "ground rent" is paid. These leases are for long periods of time (50-100 years) when originated. The lease obligation transfers with the property and cannot be canceled.

The medians for other housing costs are rounded to the nearest dollar.

Outside (P)MSAs. See Metropolitan areas.

Overall opinion of neighborhood. The data presented are based on the respondent's overall opinion of the neighborhood. The respondent defines neighborhood. The respondent was asked to rate the neighborhood based on a scale from 1 to 10, where 10 is the best and 1 is the worst.

Overall opinion of structure. The data presented are based on the respondent's overall opinion of the house or apartment as a place to live. The respondent was asked to rate the structure based on a scale from 1 to 10, where 10 is the best and 1 is the worst.

Owner or manager on property. These statistics show the number of rental housing units in structures of two or more units with the owner or resident manager living on the property.

Own never-married children under 18 years old. See "Household composition."

Painted surfaces.

National books. Not applicable.

National microdata. This item is restricted to housing units built before 1978 (older homes). Respondents were asked 1) whether they had peeling paint, and 2) whether the peeling paint was inside or outside the house. Respondents also were asked whether any work was done, such as sanding or scraping that would have disturbed painted surfaces, and if they replaced or repaired doors or frames, cabinets or built in shelves, inside walls or ceilings, windows (not counting glass) and outside walls, foundation, doors, and window frames or trim.

Additionally, respondents were asked if they were told before moving in that the paint might contain lead.

Parallel heating equipment. This is additional heating equipment for an area not heated by the main heating equipment.

Payment plans of primary and secondary mortgages. Data are presented separately for primary and secondary mortgages. The term "payment" refers to regular principal and interest payments only, and not to payments for real estate taxes and property insurance. Fixed payment, self amortizing mortgages have payments that do not change during the term of the loan, with the principal payments sufficient to pay off the loan completely within the stated term. Adjustable rate mortgages are mortgages whose interest rates could be changed during the life of the mortgage, changing the amount of the payments required. In adjustable term mortgages the amount of the payments stays constant, but the number of payments required to pay off the loan can change over time as interest rates change. Graduated payment mortgages allow monthly payments to change during the term of the mortgage by means other than a change in interest rate. These mortgages begin with lower payments that rise later in the life of the mortgage. Balloon mortgages are mortgages in which only part or none of the principal is paid off during the term of the loan (which commonly is about 5 years). At the end of the term, the principal is paid off in one lump sum, refinanced with a new loan, or extended by renewal of the loan.

National books and microdata. Not applicable.

Persons. See "Household."

Persons other than spouse or children.

Books. Data are shown for households with the following types of people:

Other relatives of householder. This category counts households that include any person related to the householder by blood, marriage, or adoption, except spouse, son, daughter, stepchild, or adopted child under 18 years old (regardless of marital status).

Single adult offspring 18 to 29. This category counts households with at least one member aged 18-29, if he or she is not currently married (that is, they have never been married or are divorced, separated or widowed), and is a son, daughter, stepchild, or adopted child of the householder. Note this category has the same marital status categories as "Single children under 18 years old," but the same relationship to householder categories as "Own never-married children." These are defined under "Household Composition."

Single adult offspring 30 years of age or over. This category counts households with at least one member aged 30 or older, if he or she is not currently married (that is, they have never been married or are divorced, separated or widowed), and is a son, daughter, stepchild, or adopted child of the householder.

Households with three generations. For each person whose parent lives in the household, the parent (biological, adoptive, or stepparent) is identified in the questionnaire. Each person who is a child or grandchild of the householder is also identified. These codes keep count of households where the following live in the unit: one or more sons, daughters, stepchildren or adopted children of the householder or spouse (regardless of marital status or age), and one or more parents of the householder or spouse, or one or more parents of the householder or spouse, and one or more parents of these parents, or one or more sons, daughters, stepchildren or adopted children of the householder or spouse (regardless of marital status or age), and one or more of these children's children (grandchildren of the householder or spouse, regardless of marital status or age).

Note that the definition of children is different from those in "Single children under 18 years old," and "Own never-married children." The first does not involve relationship to householder, and neither involve marital status and age. Also note that if a household has more than three generations, it is still counted here. In addition to the three generations, there also may be other relatives in the household.

Subfamily. A subfamily is one of the following groups that do not include the householder or spouse, but are related to the householder and live in the household (1) a married couple (with or without children of any type), or (2) one parent with one or more of his or her own never-married children under 18 years old. A common example of a subfamily is a young married couple sharing the home of the husband's or wife's parents.

Subfamily householder. For subfamilies that include a couple, the husband is defined as the subfamily householder; for other subfamilies the parent is the householder.

Households with other types of relatives. This category counts households with relatives of the householder, other than the spouse, children, three generations, or subfamilies already counted. Therefore, it includes relatives such as uncles, nieces, cousins, or grandchildren present without their parents. A household already counted above may be counted again, as long as it has some additional relatives not counted above.

Nonrelatives. A nonrelative of the householder is any person in the household who is not related to the householder by blood, marriage, or adoption. Roomers, boarders, lodgers, partners, resident employees, wards and foster children are included in this category.

Co-owners or co-renters. This category includes households for which the names of two or more unrelated household members are on the deed of ownership, mortgage, land contract, contract to purchase, or similar document, or lease; or, if there is no lease, two or more unrelated household members are responsible for paying the rent.

Lodgers. This category is restricted to members of the household who pay rent to another household member and are age 16 and older, nonrelatives of the householder, not sons,

daughters, stepchildren, or adopted children of a co-owner or co-renter, and not a co-owner or co-renter themselves. This item does not use the "lodger" answer on relationship to the householder since it is less carefully defined than the question on lodgers' rent. See also "Household," "Rent paid by lodgers."

Unrelated children under 18 years old. This category counts households with members under 18 years old who are unrelated to the householder and are not co-owners, co-renters, or lodgers, regardless of marital status. Thus it includes foster children and children of lodgers and employees as long as they are under 18.

Other nonrelatives. This category counts households with nonrelatives of the householder who are not in the categories above, so they are not co-owners, co-renters, lodgers, or under 18. For example, it includes employees and housemates who do not pay a regular rent as lodgers. It also may include households with nonrelatives counted in the categories below.

One or more secondary families. A secondary family is a group of two or more people who are related to each other by birth (Parent/child, child less than 18 years old), marriage, or adoption, but who are not related to the householder. The unrelated secondary family may include people such as guests, roomers, boarders, or resident employees and their relatives living in a household.

Two- to eight-person households, none related to each other. None of the household members is related to any other household member. They may be co-owners, co-renters, lodgers, partners, employees, or foster children. The books make no distinction between housemates and unmarried partners, because we do not want the interviewers to probe into private relationships.

Microdata. Not applicable; may be calculated from household relationships.
See also "Household composition."

Persons per room.

Books. Persons per room is computed for each occupied housing unit by dividing the number of people in the unit by the number of rooms in the unit. The figures shown refer, therefore, to the number of housing units having the specified ratio of people per room.

Microdata. Not applicable; may be calculated from household size and rooms.

Persons--previous residence. All people are counted who lived at the previous residence at the time of the move, as well as those who usually lived there but were temporarily away. Persons who were staying there at the time of move, but who had a usual residence elsewhere, were not counted.

Physical problems--severe. A unit has severe physical problems if it has any of the following five problems:

Plumbing. Lacking hot or cold piped water or a flush toilet, or lacking both bathtub and shower, all inside the structure (and for the exclusive use of the unit, unless there are two or more full bathrooms).

Heating. Having been uncomfortably cold last winter for 24 hours or more because the heating equipment broke down, and it broke down at least three times last winter for at least 6 hours each time.

Electric. Having no electricity, or all of the following three electric problems: exposed wiring, a room with no working wall outlet, and three blown fuses or tripped circuit breakers in the last 90 days.

Hallways. Having all of the following four problems in public areas: no working light fixtures, loose or missing steps, loose or missing railings, and no working elevator.

Upkeep. Having any five of the following six maintenance problems: (1) water leaks from the outside, such as from the roof, basement, windows, or doors; (2) leaks from inside structure such as pipes or plumbing fixtures; (3) holes in the floors; (4) holes or open cracks in the walls or ceilings; (5) more than 8 inches by 11 inches of peeling paint or broken plaster; or (6) signs of rats in the last 90 days.

Physical problems--moderate. A unit has moderate physical problems if it has any of the following five problems, but none of the severe problems:

Plumbing. On at least three occasions during the last 3 months, all the flush toilets were broken down at the same time for 6 hours or more (see "Flush toilet and flush toilet breakdowns").

Heating. Having unvented gas, oil, or kerosene heaters as the primary heating equipment.

Kitchen. Lacking a kitchen sink, refrigerator, or cooking equipment (stove, burners, or microwave oven) inside the structure for the exclusive use of the unit.

Hallways. Having any three of the four problems listed above.

Upkeep. Having any three or four of the six problems listed above in "upkeep."

See also "Bars on windows of buildings," "Common stairways," "Equipment," "External building conditions," "Flush toilet and flush toilet breakdowns," "Heating equipment and heating equipment breakdowns," "Overall opinion of structure," "Primary source of water and water supply stoppage," "Water leakage during last 12 months," "Selected deficiencies."

Places.

National books. The geographic variable place size, as shown in national reports, shows the current count of housing units in places as defined in the 1980 census.

Microdata and metropolitan books. Not applicable.

See also "Central cities" and "Urban and rural residence."

Plumbing facilities. The category "With all plumbing facilities" consists of housing units that have hot and cold piped water as well as a flush toilet and a bathtub or shower. For units with less than two full bathrooms, the facilities are only counted if they are for the exclusive use of the occupants of the unit. Plumbing facilities need not be in the same room. Lacking some plumbing facilities or having no plumbing facilities for exclusive use means that the housing unit does not have all three specified plumbing facilities (hot and cold piped water, flush toilet, and bathtub or shower) inside the housing unit, or that the toilet or bathing facilities are also for the use of the occupants of other housing units.

See also "Complete bathrooms," "Flush toilet and flush toilet breakdowns," "Sewage disposal and sewage disposal breakdowns."

Population in housing units.

Books. Included are all people living in housing units. Persons living in group quarters are excluded.

Microdata. Not applicable; can be calculated by adding weight times household size, for all occupied units.

Poverty status. The poverty data differ from official poverty estimates in two important respects:

(1) Interest in housing affordability made it appropriate for AHS to adopt a poverty definition based on household income. The official method is based on the income of families, and of individuals living without relatives. (Under the official approach, the poverty status of two unrelated individuals living together would be determined by comparing the income of each individual to the one-person poverty threshold. The result might be that both were in poverty, both were out of poverty, or one was in poverty and one was not. In the AHS books, their poverty status was determined by comparing their combined income to the two-person poverty threshold.) The effect of using household income is to count about 6 percent fewer people in poverty than the official estimate. See "*Technical Paper X, Effect of Using a Poverty Definition Based On Household Income*," U.S. Department of Health, Education, and Welfare, 1976.

(2) The official poverty estimates are based on the March supplement to the Current Population Survey. Income questions in that survey are very detailed, and measure income received during the previous calendar year. Income questions in the AHS are much less detailed, and measure income received during the 12 months just before the interview. Because interviews were conducted over several months, the AHS income measures do not pertain to a fixed period.

The poverty thresholds are based on the Department of Agriculture's 1961 Economy Food Plan and reflect different consumption requirements by number of adults and children. They consider only money income (see Income), not assets or benefits in kind, such as housing subsidies. The poverty thresholds are updated every year to reflect changes in the Consumer Price Index (CPI).

Note that in the official poverty thresholds, elderly are expected to need less than nonelderly in the one- to two-person groups. Also note that an all-adult household is expected to need less than the same size household where one member is a child, but if additional members are children, costs go down again.

These official poverty thresholds are different from the poverty guidelines published for program purposes by the U.S. Department of Health and Human Services (HHS).

HUD "very low income limits" (the L50 series) for four-person households are 50 percent of median family income for families in each metropolitan area or nonmetropolitan county. The HUD income limits vary among areas, and the average national HUD income limits in 1997 are shown (local details are at www.huduser.org/data/factors.html).

The HUD adjustments for household size in the L50 series are very roughly based on national average differences in housing cost. The HUD limits have smaller adjustments than the official and HHS poverty thresholds, which are based on food cost. Housing cost does not vary as much as food does between small and large households. Academic research suggests even the HUD adjustments may be too large; see van Praag, "The Relativity of the Welfare Concept," in Nussbaum and Sen, *Quality of Life*, Oxford University Press, 1993, page 374, which suggests 6 percent adjustments per person instead of HUD's 10 percent and 8 percent adjustments.

Microdata. Not applicable; may be calculated by comparing current or past income to the thresholds.

Present and previous units. The present unit is the one occupied by the householder or respondent at the time of the interview. The previous unit is the one from which the householder or respondent moved. If the householder or respondent moved more than once during the 12 months prior to the date of the interview, the previous unit is the one from which they last moved.

Previous home owned or rented by someone who moved here.

Books. These data are shown for units where the householder moved within the United States during the past year.

Microdata. Data are shown for units where anyone in the present household moved within the United States during the past year.

Previous occupancy. The statistics presented are restricted to housing units built in 1990 or later. "Previously occupied" indicates that some person or people not now in the household occupied the housing unit prior to the householder or other related household members' occupancy. "Not previously occupied" indicates that either the householder or some other current household member was the first occupant of the housing unit.

Primary metropolitan statistical areas. See "Metropolitan areas."

Primary mortgage. Detailed information on mortgages was collected in the AHS on the first three mortgages reported, even if the unit had four or more mortgages. On the basis of this

information, one of the mortgages was considered to be primary. The definition of the primary mortgage may not agree with legal definitions of a "first mortgage," which would be paid first after a foreclosure.

If there is only one mortgage, it is primary. If two or more mortgages exist, the following hierarchy was used (1) Federal Housing Administration (FHA), Veterans Administration (VA), or Farmers Home Administration (FmHA) mortgage; (2) assumed mortgage; (3) mortgage obtained first; (4) largest initial amount borrowed.

Primary source of water and water supply stoppage. A public system or private company refers to any source supplying running water to six or more housing units. The water may be supplied by a city, county, water district, or private water company, or it may be obtained from a well that supplies six or more housing units. An individual well that provides water for five or fewer housing units is further classified by whether it is drilled or dug. Water sources such as springs, cisterns, streams, lakes, or commercial bottled water are included in the other category.

Water supply stoppage means that the housing unit was completely without running water from its regular source. Completely without running water means that the water system servicing the unit supplied no water at all; that is, no equipment or facility using running water (in kitchen and bathroom sinks, shower, in bathtub, flush toilet, dishwasher, and other similar items) had water supplied to it, or all were inoperable. The reason could vary from a stoppage because of a flood or storm, to a broken pipe, to a shutdown of the water system, to a failure to pay the bill, or other reasons.

Data on water supply stoppage are shown if they occurred in the 3 months prior to the interview, or while the household was living in the unit if less than 3 months, and if the breakdown or failure lasted 6 consecutive hours or more. Housing units with water supply stoppage also are classified according to the number of times the stoppages occurred.

Principal. See "Total outstanding principal amount."

Problems. See "Neighborhood conditions and neighborhood services," "Physical problems," "Poverty status."

Property insurance. This item refers to insurance on the structure and/or its contents (such as furniture, appliances, or clothing) and usually contains some liability insurance. Renters usually do not have property insurance, but its cost is counted if they do have it. The total cost is the most recent yearly cost for which the occupants have actually been billed. Yearly cost was divided by 12 before calculating a monthly median cost. Medians for property insurance are rounded to the nearest dollar.

Public elementary school. See "Educational attainment" and "Neighborhood conditions and neighborhood services."

Purchase price. The purchase price refers to the price of the house or apartment and lot at the time the property was purchased. Closing costs are excluded from the purchase price, and for mobile homes, the value of the land is excluded. In the books, the median purchase price is rounded to the nearest dollar.

Quality. See "Neighborhood conditions and neighborhood services," "Physical problems," "Selected amenities," "Selected deficiencies."

Questionnaire. Computer Assisted Personal Interviewing (CAPI) was introduced in 1997, eliminating paper questionnaires. The questions and the question interview pattern are available as part of the Field Representative's guide for the AHS released on the Census Bureau Web site. The computer code controlling the interviews, known as "Q-Code" ("Questionnaire Code"), can be found on the HUD USER Web site. The Field Representative's guide is much easier to read than the Q-Code but does not include information on skip patterns or the exact rules for question flow.

Race. In the books, the classification of "race" refers to the race of the householder occupying the housing unit. The concept of race as used by the Census Bureau does not denote a clear-cut scientific definition of biological stock. Race was determined on the basis of a question that asked for self-identification of a person's race. For respondents who refused to answer, the interviewer decided on a race only for people she or he saw; others are imputed by computer. For mixed-race answers, respondents are asked for the race most closely identified with, respondents are asked for the mother's race, or the first race mentioned is used, in that order of priority.

Hispanic is considered an ethnic origin rather than a race and is tallied separately. Most Hispanics report themselves as White, but some report themselves as Blacks or other categories. Figures are given for race and ethnicity in Table 2-1 of the printed reports.

Revisions to the OMB Statistical Policy Directive 15 designate five races (White, Black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or other Pacific Islander) and two ethnic origins (Hispanic or Latino and not Hispanic or Latino). The AHS will adopt the new terminology in 2003.

Ratio of value to current income.

Books. The ratio of value to current income was computed by dividing the value of the housing unit by the total current (family) income (see definition of current income). The ratio was computed separately for each housing unit and was rounded to the nearest tenth. For value and current income, the dollar amounts were used. Units occupied by individuals who reported no income or a net loss compose the category "zero or negative income." Medians for the ratio of value to current income are rounded to the nearest tenth.

Microdata. Not applicable; can be calculated from value and income.

Real estate taxes. This item includes special assessments, school taxes, county taxes, and any other real estate taxes. Excluded are payments on delinquent taxes due from prior years. Rebates are subtracted from the total. When the real estate taxes are included with the mortgage, a separate amount for the taxes is obtained. To determine average monthly cost, yearly cost was divided by 12. In the books, medians for real estate taxes are rounded to the nearest dollar.

Reasons for leaving previous unit. These data are shown for units where the respondent moved during the 12 months before the interview. The distribution may not add to the total, because the respondent was not limited to one reason.

Private displacement includes situations in which a private company or person wanted to use the housing unit for some other purpose (to develop the land or building commercially, to occupy the unit, to convert the unit to a condominium or cooperative, or to make repairs and renovate the unit).

Government displacement means the respondent was forced to leave by the government (local, state, or federal), because it wanted to use the land for other purposes (to build a road or highway, for urban renewal or other public activity, because the building was condemned, or some other reason).

Disaster loss includes damage by a tornado, storm, flood, earthquake, fire, landslide or other similar occurrences.

New job or job transfer indicates that the respondent moved to begin a new job or was transferred from the previous location to the present location.

To be closer to work/school/other means that the respondent moved because commuting was too far and respondent wanted to live closer to work, school, or some other commuting purpose.

Other, financial/employment related refers to financial or employment related reasons, such as wanting to look for a new or different job, because the person entered or left the U.S. Armed Forces, retired, or some other financial/employment reason.

To establish own household means that the respondent left a previous residence (parent's home, rooming or boarding house, or shared apartment) to establish own household.

Needed larger house or apartment refers to moves that were necessary because of crowding or for aesthetic reasons.

Married, widowed, divorced, or separated is marked if the respondent moved because of marital reasons.

Other, family/personal related indicates that the respondent moved because of family or personal reasons such as wanting to live closer to relatives.

Wanted better home was marked if the respondent moved because the previous residence was too old, run-down, in need of too many repairs or if there was nothing wrong with the previous home, but the respondent simply wanted to move to a better one.

Change from owner to renter, or change from renter to owner indicates a change in tenure.

Wanted lower rent or less expensive maintenance indicates that the respondent moved because the rent (or mortgage) payments were too high at the previous residence or that the taxes or upkeep were too high.

Other housing related reasons includes such reasons as respondent wanted larger yard, different zoning, or wanted a better investment.

Other includes examples such as respondent wanted a change in climate, neighborhood crime problem, racial or ethnic composition of neighborhood.

See also "Choice of present home and home search" and "Choice of present neighborhood and neighborhood search."

Recent movers. Data for recent movers are shown for two categories of movers: (1) units where the householder moved into the present unit during the 12 months prior to the interview (shown as a column in most tables, and in Table 10 of each chapter) and (2) units where the respondent moved into the present housing unit during the 12 months prior to the interview (Table 11 of each chapter). In most cases, the two groups represent the same households.

Microdata also show moves of other household members.

Recent movers comparison to previous home. This item is based on the respondent's comparison between the present unit and previous unit as to which was better.

Recent movers comparison to previous neighborhood. This item is based on the respondent's comparison between the present neighborhood and the previous neighborhood as to which was better. The definition of neighborhood is whatever the respondent considers it to be.

Regions. States contained in each region are as follows:

Northeast. Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, Pennsylvania, and New Jersey.

Midwest. Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Kansas, Nebraska, North Dakota, and South Dakota.

South. Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Kentucky, Arkansas, Louisiana, Oklahoma, and Texas.

West. Montana, Wyoming, Colorado, New Mexico, Arizona, Utah, Idaho, Alaska, Washington, Oregon, Nevada, California, and Hawaii.

Remaining years mortgaged. The owner or owner's spouse was asked the length of time it would take to pay off the loan at the current payments. The response reflects the amortization schedule. For example, in many balloon mortgages the initial monthly payments are calculated to pay off the loan in 30 years, though the mortgage is due in 5 years, and the 60th payment is very large. Such a mortgage would count here as 30 years, not 5 years, minus whatever number of years have passed. In the books, medians for remaining years mortgaged are rounded to the nearest year.

Rent paid by lodgers. This item refers to regular, fixed rent: a set amount of money, billed or charged, which is paid at regular intervals by a lodger (usually weekly or monthly) to a member of the household. This category is restricted to lodgers who are 16 years and older, nonrelatives of the householder, and people who are not spouses of a co-owner or co-renter, not children of a co-owner or co-renter, and not a co-owner or co-renter themselves. Medians for rent paid by lodgers are rounded to the nearest dollar.

Rent reductions. Rent control means that increases in rent are limited by state or local law. The jurisdiction, state or local agency, mandates that rent increases may not exceed some level, or must be approved by the government. This category does not include limits that HUD puts on all rental projects insured by the Federal Housing Administration.

A housing unit is classified as being in a public housing project if the unit is owned by any local or state government agency, and operated as public housing. These organizations may receive subsidies from the federal or state government, but the local agency owns the property. A housing unit is classified as having a subsidy if the household pays a lower rent because a federal, state, or local government program pays part of the cost of construction, mortgage, or operating expenses. These programs include rental assistance programs where part of the rent for low-income families is paid by HUD, and direct loan programs of HUD and the Department of Agriculture for reduced cost housing. Units requiring income verification are usually subsidized. Many households in these programs apply through the public housing authority, and misreport themselves in public housing. Others do not think of their units as subsidized, and misreport themselves as unsubsidized.

Subsidies for homeowners, including HUD subsidies for cooperatives, are not counted, since the questions are asked only of renters.

Renter maintenance quality. Renters were asked their opinion of owner's response time and if owners were polite and considerate for maintenance and repairs of major and minor problems. The definition of a major or minor problem was left up to the discretion of the respondent. Satisfaction was measured by the following choices: "usually," "not usually," "very mixed," "haven't needed any," and "landlord not responsible for maintenance." When problems occurred, renters were asked if problems were solved quickly once repairs started.

Replacements and additions.

Microdata. The statistics refer to within 2 years prior to the interview and are restricted to owner-occupied units. The respondents were first asked if, in the last 2 years has there been a major disaster, such as an earthquake, tornado, hurricane, landslide, fire, or flood that required them to make extensive repairs to their home. Only if the damage involved at least 2 rooms or a majority of the home were replacements and additions counted as disaster required repairs.

Respondents were asked to name major repairs made within the last 2 years. Also, they were asked if the repair was a replacement or an addition, if someone in the household did the work, and the cost of the repair.

The microdata file shows the total number of replacements/additions reported by all households, and the total cost of these replacements/additions. Each household could name as many as 74 jobs done in their home.

Questions were asked about where the work was done, if any rooms were created or attached, and if the bathroom or kitchen had been remodeled within the last 2 years.

Respondents also were asked if they added or replaced their roof, siding, interior water pipes; electrical wiring, fuse boxes or breaker switches; doors or windows; plumbing fixtures such as sinks or bath tubs; insulation; wall to wall carpeting, flooring; paneling or ceiling tiles; air conditioning; built in heating equipment; septic tank; water heater; dishwasher, garbage disposal; driveways or walkways; fencing or walls; patio, terrace or detached deck; swimming pool, tennis court and other recreational structures; shed, detached garage or other buildings.

The microdata file also includes information about whether the household got a low interest loan or grant to pay for repairs and the amount spent in a typical year on routine repairs and maintenance.

Reverse annuity mortgages. These were defined to the respondent as "reverse annuity mortgage or home equity conversion mortgage." These mortgages involve borrowing against home equity for retirement or income and sometimes do not need to be repaid until after the owner's death.

Rooms. The respondent was asked to report all rooms in the housing unit. The interviewer then coded the responses into different categories. Rooms counted include whole rooms used for living purposes, such as bedrooms, living rooms, dining rooms, kitchens, recreation rooms, permanently enclosed porches that are suitable for year-round use, lodgers' rooms, and other finished rooms. Also included are rooms used for offices by a person living in the unit. Median for rooms is rounded to the nearest tenth (see Medians).

A dining room, to be counted, must be a separate room. It must be separated from adjoining rooms by built-in archways or walls that extend at least 6 inches from an intersecting wall. Half walls or bookcases count if built-in. Movable or collapsible partitions or partitions consisting solely of shelves or cabinets are not considered built-in walls.

Bathrooms, laundry rooms, utility rooms, pantries, and unfinished rooms are not counted as rooms.

Rooms used for business. A room used for business or office space is a room set up for use as an office or business such as rooms for: a business owner, contract worker, self-employed person, commercial use (such as daycare or catering) or regular job.

The question asked if rooms were exclusively used for business space. Followup questions asked if there is direct access to the outside without going through any other room and whether the space is used both as business space and for personal use. See also "Other activities on property."

Routine maintenance in last year. Routine maintenance consists of regular maintenance activities necessary for the preventive care of the structure, property and fixed equipment items. Included are such things as painting, papering, floor sanding, restoring of some shingles, fixing water pipes, replacing parts of large equipment, such as furnace, repairing fences, gutters, sidewalks, decks or patios, removing dangerous trees, termite inspection. Housecleaning is not included. Routine maintenance does not include work reported under the section on repairs, improvements, and alterations. Medians for routine maintenance are rounded to the nearest dollar.

Rural. See "Urban and rural residence."

Safety of primary source of water. Water was considered safe (consumable or potable) if the main water source was used or could be used for drinking. The respondent was not asked what source was used by the household for drinking but whether or not the main water source was safe for cooking and drinking. This item excludes units where the primary source of household water was commercial bottled water.

Sample size. The sample size is the unweighted count of the actual sample cases. See Appendix B in this report for an explanation of sample design.

Savings. See "Amount of savings and investments."

Schools. See "Educational attainment" and "Neighborhood conditions and neighborhood services."

Seasonal units. See "Vacancy, seasonality, and marketing."

Selected amenities.

Porch, deck, balcony, or patio is counted if it is attached to the sample unit, not just to the building or free standing. Porches may be enclosed or open. The porch, deck, balcony, or patio is only counted if it is at least 4 feet by 4 feet.

Usable fireplace. Excludes the following: fireplaces that have been blocked off or whose chimney or flue has been filled, decorative or artificial fireplaces and wood stoves, even if shaped like a fireplace, like a Franklin stove. Free-standing fireplaces are included in this item.

Separate dining room. A separate dining room is an area separated from adjoining rooms by archways or wall that extend at least 6 inches from an intersecting wall. See "Rooms."

Living rooms, recreation rooms, etc. Includes family rooms, dens, recreation rooms and/or libraries.

Garage or carport. The garage or carport is only counted if it is on the same property, though not necessarily attached to the house. Off-street parking includes driveway or parking lot privileges that are paid for as part of the rent or owned with the unit. Data on garage or carport are not collected for occasional-use vacant units and other vacant units.

See also "Overall opinion of structure."

Selected deficiencies.

Signs of mice or rats. The statistics on signs of mice or rats refer to respondents who reported seeing mice or rats or signs of mice or rats inside the house or building during the 3 months prior to interview or while the household was living in the unit if less than 3 months. Signs of mice or rats include droppings, holes in the wall, or ripped or torn food containers.

Holes in floors. Respondents were asked about holes in the interior floors of the unit. The holes may or may not go all the way through to a lower floor or to the exterior of the unit. The holes are only counted if large enough for someone to trip in.

Open cracks or holes (interior). Statistics are presented on open cracks or holes in the interior wall or ceilings of the housing unit. Included are cracks or holes that do not go all the way through to the next room or to the exterior of the housing unit. Hairline cracks or cracks that appear in the walls or ceilings but are not large enough to insert the edge of a dime, are not counted. Very small holes caused by nails or other similar objects are also not counted.

Broken plaster or peeling paint (interior). The area of peeling paint or broken plaster must be on the inside walls or ceilings and at least one area of broken plaster or peeling paint must be larger than 8 inches by 11 inches.

Electric wiring. A housing unit is classified as having exposed electric wiring if the unit has any wiring that is not enclosed, either in the walls or in metal or plastic coverings. Excluded are appliance cords, extension cords, chandelier cords, and telephone, antenna, or cable television wires.

Electric wall outlets. A housing unit is classified as having rooms without electric wall outlets if there is not at least one working electric wall outlet in each room of the unit. A working electric wall outlet is one that is in operating condition; that is, it can be used when needed. If a room does not have an electric wall outlet, an extension cord used in place of a wall outlet is not considered to be an electric wall outlet.

Sewage disposal and sewage disposal breakdowns. A public sewer is connected to a city, county, sanitary district, neighborhood, or subdivision sewer system, serving six or more units. A septic tank or cesspool is an underground tank or pit used for disposal of sewage (serving five or fewer units). A chemical toilet, which may be inside or outside the unit, uses chemicals to break down or dissolve sewage. Housing units for which sewage is disposed of in some other way are included in the Other category.

The data on breakdowns in the means of sewage disposal are limited to housing units in which the means of sewage disposal was a public sewer, septic tank, or cesspool. Breakdowns refer to situations in which the system was completely unusable. Examples include septic tank being pumped because it no longer perked, tank collapsed, tank exploded, sewer main broken, sewer treatment plant not operating as a result of electrical failure or water service interruption.

Data on breakdowns are shown if they occurred in the 3 months prior to the interview or while the household was living in the unit if less than 3 months, and if the breakdown lasted 6 consecutive hours or more. Housing units with a breakdown in sewage disposal also are classified according to the number of breakdowns.

See also "Painted surfaces."

Sharing. See "Cost and ownership sharing" and "Time sharing."

Single children under 18 years old. See "Household composition."

Site placement. This item is collected for mobile homes. "Site" refers to location (other than the manufacturer's or dealer's lot) and not necessarily a mobile home park site. The mobile home was not necessarily occupied at each site, as long as it was set up for occupancy.

Source of drinking water. The statistics presented are restricted to units where the respondents answered that their primary source of drinking water was not safe to drink. Units where the primary source of water was commercial bottled water were excluded. See "Primary source of water."

Specified owner and renters. See "Monthly housing costs."

Square feet per person.

Books. Square feet per person is computed for each single-family detached housing unit and mobile home by dividing the square footage of the unit by the number of people in the unit. The figures shown refer to the number of housing units having the specified square feet per person. Median square footage is rounded to the nearest foot.

Microdata. Not applicable.

Square footage of unit. Housing size is shown for single family detached housing units and mobile homes. Excluded from the calculation of square footage are unfinished attics, carports, attached garages, porches that are not protected from weather (such as screened porches), and mobile home hitches. Both finished and unfinished basements are included. Median square footage is rounded to the nearest foot. Square footage is based on the respondent's estimate of the size of the unit.

Stories between main and apartment entrances. Data are presented for multiunit structures with two or more floors and are concerned with the number of floors from the main entrance level of the building to the main entrance of the unit. "Same floor" indicates that the main entrance of the sample unit is on the same level as the main entrance that residents use to enter the building.

Stories in structure. The statistics are presented for all housing units, except for mobile homes. Any basement is included, whether finished or not. Finished attics also are included; unfinished attics are not. For split levels and bilevels, the number of stories is determined by the highest number of floors that are physically over each other.

Structure type of previous residence. These data are shown for householders who moved within the United States during the previous 12 months. They are based on the respondent's classification.

Subsidies. See "Rent reductions."

Suburbs. Suburbs are defined in the AHS as the portion of each metropolitan area that is not in any central city. See also "Central cities" and "Metropolitan areas."

Suitability for year-round use. See "Vacancy, seasonality, and marketing."

Supplemental heating equipment. Additional heating equipment for a heated area of the housing unit.

Taxes. See "Annual taxes paid per \$1,000 value" and "Real estate taxes."

Tenure. Any housing unit is owner occupied (including a cooperative or condominium unit) if someone whose name is on the deed, mortgage, or contract to purchase, lives in the unit. Units where the elderly "buy" a unit to live in for the remainder of their lives, after which it reverts to the seller, are considered owner-occupied. All other occupied housing units are classified as renter occupied units, including units rented for cash, if occupants or others pay some rent, and/or occupied without payment of cash rent, such as a life tenancy or a unit that comes free with a job. Households who do not pay cash rent may still pay utilities.

Tenure of previous unit. These data are shown for householders who moved within the United States during the 12 months prior to the interview. The previous unit was owner occupied if the owner or co-owner lived in the unit. All other previous units were renter occupied.

Term of primary mortgage at origination or assumption. Term is the number of years from the date the present owner-occupants first obtained the present mortgage to the date the last payment is due according to the terms of the contract. On a balloon mortgage this term may be short, and the last payment very large. In the books, medians for term of primary mortgage are rounded to the nearest year.

Total outstanding principal amount.

Books. The statistics shown represent the total amount of principal that would have to be paid off if the loans were paid off in full on the date of interview. The formula used to calculate the outstanding principal amount does not take into account the fact that some households make additional principal payments. The resulting data, therefore, may be an overestimate of the total outstanding principal. In the books, medians for outstanding principal amount are rounded to the nearest dollar. The data include all regular mortgages but exclude home equity loans.

Microdata. Not applicable.

Trash, litter, or junk on streets or any properties. The respondent was asked if there was trash, litter, or junk in the streets, roads, empty lots, or on any properties within 300 feet of the

building. Major accumulation includes tires, appliances or large amounts of trash accumulated over a period of time. Minor accumulation includes small amounts of paper, cans, or bottles that do not give the impression of long neglect. The property on which the sample unit is located is included.

Trucks. See "Cars and trucks available."

Type of primary mortgage. The federal government agencies that currently insure or guarantee mortgages or similar debts include the Federal Housing Administration (FHA), the Department of Veterans Affairs (VA), and the Farmers Home Administration (FmHA). Mortgage insurance is a promise to pay the lender's losses in case the borrower fails to keep up the required mortgage payments and defaults on the loan. Such insurance protection is offered by the Government, acting as an insurance agent, and by private mortgage insurance companies. Mortgage loans that are not insured or guaranteed by these government agencies are referred to as "conventional" mortgages. Conventional mortgages, including mortgages insured or guaranteed by state or local governments, are shown as "Other types."

Units. See "Housing unit," "Occupied housing units," "Vacancy, seasonality, and marketing."

Units in structure. In determining the number of housing units in a structure, all units, occupied and vacant, were counted. The statistics are presented for the number of housing units, not the number of residential structures. A structure either has open space on all sides or is separated from other structures by dividing walls that extend from ground to roof.

Structures containing only one housing unit are further classified as: detached if it has open space on all four sides, or attached if it has unbroken walls extending from ground to roof that divide it from other adjoining structures, as in many rowhouses or townhouses. If a unit shares a furnace or boiler with adjoining units, then the walls are pierced by pipes or ducts, and all the units thus joined are included in one structure.

Mobile homes are shown as a separate category (see "Mobile homes").

Urban and rural residence. As defined for the 1980 census, urban housing comprises all housing units (a) in urbanized areas and (b) in places (see Places) of 2,500 or more inhabitants outside urbanized areas, but excluding housing units in the rural portions of extended cities. Housing units not classified as urban are rural housing.

Urbanized areas. In the 1980 census, each urbanized area comprised an incorporated place and adjacent densely settled area (1.6 or more people per acre, or 1,000 or more people per square mile) that together had at least 50,000 population. It also included some less dense adjacent land such as industrial parks and golf courses inside city limits.

More information on urbanized areas and the historical development of the urban-rural definition appears in the 1980 Census of Population reports, *Characteristics of the Population, Number of Inhabitants, PC80-1-A*.

Utilities. See "Monthly costs for electricity and gas."

Vacancy, seasonality. A housing unit is vacant if no one is living in it at the time of the interview, unless its occupants are only temporarily absent. In addition, housing units where all the occupants have a usual residence elsewhere are grouped with vacant units.

Year-round housing units. This includes all units occupied by people as their usual residence, regardless of design, and all vacant units that are intended by the owner for occupancy at all times of the year. For example, if a unit in a resort area is intended for occupancy in all seasons, it is a year-round unit.

For rent. Owners of some units offer them for rent. Other owners solicit offers either *for rent* or for sale. When separate categories for these are not shown, they are both included in *for rent*, as in the rental vacancy rate.

Rental vacancy rate. The rental vacancy rate is the number of vacant year-round units for rent as a percent of the total rental inventory; i.e., all renter-occupied housing units and all year-round vacant housing units for rent or rented, not occupied.

For sale only. Units "for sale only" are offered for sale, and the owner does not solicit renter-occupants, even though the owner might eventually rent the unit.

Rented or sold. If any money rent has been paid or agreed upon, but the new renter has not moved in as of the date of the interview, or if the unit has recently been sold, but the new owner has not yet moved in, the unit is classified as rented or sold.

Occasional use. These are units held for weekend or other occasional use throughout the year. Second homes may be classified here or as seasonal.

URE. These are temporarily occupied by persons with Usual Residence Elsewhere. If all people in a housing unit usually live elsewhere, the unit is classified as vacant. For example, a beach cottage occupied at the time of the interview by a family that has a usual residence in the city is included in the count of vacant units. Their home in the city or the home of a comparable vacationing family also can be in the AHS sample and would be reported as occupied since the occupants are only temporarily absent. URE units also may be classified in any of the vacancy categories: seasonal or for sale.

Other vacant. This category includes units held for settlement of an estate, units held for occupancy by a caretaker or janitor, and units held for personal reasons of the owner.

Seasonal units are intended by the owner to be occupied during only certain seasons of the year. They are not anyone's usual residence. A seasonal unit may be used in more than one season; for example, for both summer and winter sports. Published counts of seasonal units also include housing units held for occupancy by migratory farm workers. While not currently intended for year-round use, most seasonal units could be used year-round; see the next item.

Suitability for year-round use. For vacant housing units that are not intended by their current owners for year-round use (seasonal and migratory), the respondent was asked whether the construction and heating of the housing unit made it suitable for the unit to be occupied on a

year-round basis. A housing unit is suitable for year-round use if it is built as a permanent structure, properly equipped, insulated, and heated as necessitated by the climate.

Time sharing. This item is restricted to vacant housing units, including units temporarily occupied by people who have usual residences elsewhere. Time sharing is a form of ownership in which a single property is owned by multiple owners. Each is entitled to occupy the unit for a limited period of time. The number of years of ownership may vary depending on the terms of the contract. Participants in time-sharing ownership usually, but not always, receive a deed of ownership.

Duration of vacancy refers to the length of time (in months) from the date the last occupants moved from the housing unit to the date of the interview. The data, therefore, do not provide a direct measure of the total length of time that units remain vacant. For newly constructed units that have never been occupied, the duration of vacancy is counted from the date construction was completed. For recently converted or merged units, the time is reported from the date that conversion or merger was completed.

Last used as a permanent residence. The statistics refer to the length of time (in months) since units that are currently seasonal vacant were last used as a permanent residence, and is measured as of the date of interview. Units that have always been used for short-term or seasonal occupancy, are classified as *Never occupied as permanent home*.

Comparability. There may be differences between the AHS and other surveys that present vacancy rates. The differences may be attributed to such factors as differing interview periods, survey designs, survey techniques, and processing procedures, as well as differences in concepts and definitions. In addition, there are sampling and nonsampling errors.

Value. Value is the respondent's estimate of how much the property (house and lot) would sell for if it were for sale. Any nonresidential portions of the property, any rental units, and land cost of mobile homes, are excluded from the value. For vacant units, value represents the sale price asked for the property at the time of the interview, and may differ from the price at which the property is sold. In the books, medians for value are rounded to the nearest dollar. See also "Ratio of value to current income."

Water. See "Plumbing facilities," "Primary source of water and water supply stoppage," "Safety of primary source of water," "Source of drinking water."

Water leakage during last 12 months. Data on water leakage are shown if the leakage occurred in the 12 months prior to the interview or while the household was living in the unit if less than 12 months. Housing units with water leakage are classified by whether the water leaked in from inside or outside the building and by the most common areas (roof, basement, walls, closed windows, or doors) or reasons (fixtures backed up or overflowed or pipes leaked) of water leakage.

Work. See "Income" and "Journey to work."

Year householder moved into unit. The data are based on the information reported for the householder and refer to the year of latest move. Thus, if the householder moved back into a

housing unit previously occupied, the year of the latest move was to be reported. If the householder moved from one apartment to another in the same building, the year the householder moved into the present unit was to be reported. The intent is to establish the year present occupancy by the householder began. The year the householder moves is not necessarily the same year other members of the household move; although, in the great majority of cases the entire household moved at the same time. In the books, the median year householder moved into unit is rounded to the nearest year. See also "Year structure built."

Year primary mortgage originated. The year the primary mortgage was originated is the year the mortgage was signed (see Primary mortgage). In the books, medians for year primary mortgage originated are rounded to the nearest year.

Year structure built. Year structure built represents the respondent's estimate of when the building was first constructed, not when it was remodeled, added to, or converted. The figures refer to the number of housing units in structures built during the specified periods and in existence at the time of the interview. For mobile homes, the manufacturer's model year was assumed to be the year built. For mobile homes, the year the householder moved in can be earlier than the year the structure was built because the mobile home site, not the mobile home itself, is in sample. The householder could have replaced an older mobile home with a newer model. In the books, median year built is rounded to the nearest year.

Year unit acquired. The year the unit was acquired or inherited refers to the year in which the present owner acquired or inherited the house or apartment; for example, the year the contract was signed. This date may be different from the date when the occupants moved in. If the land and building were bought at different times, the year the building was acquired was recorded. If there was a land contract only, the year the contract was signed was recorded. In the books, median year acquired is rounded to the nearest year.

Appendix C: SAS Programming Tips

This section is intended to provide some helpful hints and starting points for using the SAS statistical package to write programs for AHS data. It is not intended to serve as an introduction to SAS, or to statistical packages in general; rather, it assumes an already moderate amount of knowledge and familiarity with the use of SAS on the part of the reader.

Hopefully, this section will provide enough information to engage users in thinking about how to set things up in their programs, or lead them to refer to the SAS technical documentation for information on particular SAS commands. The information is SAS specific and may or may not be applicable to other statistical packages. Instructions on converting SAS files for use with SPSS are included at the very end of this section.

Data structure

AHS users should consider the following issues related to data structure to make processing easier.

Flat file versus pieces

Since 1997, the Census Bureau has published the AHS data in a SAS transport file containing different modules. The modules make data analysis easier by breaking the dataset into pieces. To conduct an analysis using the entire dataset, a “file-flattener” program that combines the modules into a format similar to the pre-1997 data is available on HUD USER. The main advantage of using the single file format is that all of the variables are in one place, allowing for analyses involving data across modules without having to merge on the data each time. The main disadvantage of this method is that the data file is much larger than when the data is in pieces because all variables must be included for each observation, even if they contain no information.

Head of household information location in flat file

In the flat file format, information on the household reference person (often known as the “head of the household”) is stored in position “1” of the collection of variables. For example, the marital status of the household reference person is stored in “MAR1”, his/her education is stored in “GRAD1”, etc. Therefore, it is not necessary to check the relationship codes each time the person characteristic variables are being used.

Data Manipulation

Particularly when working with large datasets such as the AHS, simplifying programs is critical to decreasing SAS processing time. This section provides a few brief tips on how to manipulate data in a manner that will increase SAS program speed.

File size

Generally in SAS, the smaller the data file is, the faster the program will run. This is because SAS is very disk intensive. Minimizing the amount of disk access reduces the running time of the program. Keep in mind the following to minimize file size:

Keep and Drop to adjust variables

- The SAS “keep” and “drop” data statements can be used to restrict which specific variables are in the data file.
- Limit the data file for analysis just to those variables that you are interested in analyzing will reduce file size and processing time.

Limiting numbers of observations

- Eliminate unnecessary observations by using the “delete” statement.
- Create a larger restriction on the number of observations in a data file through the “obs” option. This option can be used as part of the “options” global statement or as an option on the “data” and “set” commands. This feature is particularly useful when running a program for the first time to test for errors.

SAS compress option

- SAS can automatically compress the data sets it uses when given the “compress=yes” command on the “options” statement. The result of this command is that all datasets used by SAS are automatically reduced in size, if possible. Smaller datasets lead to less disk access, but potentially more CPU time for reading and writing.
- Given the current relationship in many computer networks of very fast processors to slow disk and network access, using the compress option generally leads to reduced processing time in programs and less disk space used.

Use of arrays

- “Arrays” are a method of easily referring to groups of variables as if they were vectors.
- Using an array simplifies programs and program maintenance. The user can set up loops to cycle through all of the variables in the array as opposed to large chunks of code to refer to every variable of interest.

Weighting

The AHS is a survey of housing units and so requires the use of “weights” to estimate the total numbers of households with a particular characteristic. For nearly all applications, the adjusted weight is the most appropriate weight to use.

Adjusted weight

- The adjusted weight – stored in the “weight” variable – is the estimated number of households that a particular observation is believed to represent.
- This weight is adjusted each year based on control totals from other Census data sources. This weight should provide a fairly accurate count of number of housing units with a particular characteristic.

Pure weight

- The pure weight – stored in the “pwt” variable – is the inverse of the probability of selection from when the sample was drawn.
- This weight will generally be constant except if there were changes in the sample (such as years with metro oversampling). This weight generally should only be used for certain time series analysis.

Missing values

While the introduction to the Allocation Variables chapter discusses the codings of missing values under the AHS, a useful tip for users is to know how SAS treats missing values in equality statements. Generally, SAS treats missing values as having a value less than all other values. This can cause logic issues for some programs. For example, if a statement in a SAS program says to set up a new variable “if age<10”, then that statement would technically be true for all cases of age less than 10 AND all cases of missing data. As a result, you must set up the program to control for that condition, such as making the statement “if age<10 and age>1” to ensure that you do not include missing values.

Character vs. numeric definitions

SAS stores variable information as either character or numeric. There are times where you will want it in one format as opposed to another. It is not always possible to convert, for example you can't convert a variable with the value of “a” to a numeric. But, you can convert a character “1” to a numeric “1” and vice versa.

This conversion may be useful depending on your particular analyses. In the following examples, “charvar” is the name of the character variable, while “numvar” is the name of the numeric variable. Note it is not possible to use the same name for both variables.

Converting numeric to character

- One way to convert a numeric variable to a character variable is to append a space at the end like:

```
Charvar=numvar || " ";
```

Converting character to numeric

- One way to convert a character variable to a numeric variable to add a 0 to it, like:

```
Numvar=charvar+0;
```

- Note that both the old and the new variables will exist in the data set. To remove the variable from the data set, use the SAS “drop” data statement.

Appearance for results

Although SAS is an extremely good statistical package, it is far weaker with presentation of information. There are a few “tips” to have the presentation of results look better.

Use of formats

Formats prompt SAS output to display a label associated with a particular value, rather than just the numeric code. AHS users may create self-designed formats using the “format” procedure, or pre-defined SAS formats for most variables are available on HUD USER.

Use of variable labels

Analogous to formats, SAS can display a label associated with a variable name as opposed to just the variable name. To associate a variable label, use the “label” command in a data statement.

SAS character sets

When SAS displays results, it uses different characters to display borders and lines in tables. These characters can be adjusted using the “-formchar” option. The default can also be adjusted by changing the system options.

Converting SAS files for use with SPSS

The SPSS syntax command for reading in various datasets in the SAS transport file is:

```
get sas data="file name" dset (dataset name)
```

where dataset names are the file modules mentioned at the beginning of this section, and further discussed in Appendix H. Note that if you omit specifying a dataset name, the command will extract only the first dataset in the transport file, which will probably be household or newhouse.

Appendix D: Allocations

General. Missing items on each housing unit are sometimes left on the file as missing data. Otherwise they are filled by *cold deck allocation* (for example TENURE is filled with owners twice as often as renters, mirroring the universe) or *hot deck allocation* (copying the answer from the most recent similar case processed). For hot deck allocation, the similar cases are defined by the cells of matrices, with the variables used in the construction of the matrix shown below.

When an answer is changed by allocating or editing, another variable is set to 1=edited or 2=allocated (0=unchanged). This variable has the same name as the substantive variable, with J added at the front, like JVALUE. If the variable name is already six characters long, the first letter is changed to J, like JENURE, the allocation variable for TENURE. The J does not stand for anything; it was chosen to minimize ambiguity, since only one active name already began with J (see index). For each variable, the codebook lists the corresponding allocation variable and what matrix was used, if applicable.

Purpose. Hot deck allocation preserves the mean and distribution of data. If an average value were used to fill missing data, distributions would appear much narrower than they are. Some groups have higher rates of missing data than others. For example, annual earnings are missing for young people much more often than for older people. If missing data were ignored, the average and distribution of the other people would be biased upwards, since the missing earnings are disproportionately low. The effect can be seen by comparing results with and without allocated data, using the J variables to identify allocated data. Bias remains, since the non-respondents vary in unknown ways from respondents, and the income data in particular are very weak (see Appendix D of Volume 3 of the AHS codebook), but hot deck allocation reduces the bias. While allocated data are generally wrong for the particular household, the overall distribution may be right. When variables are cross-tabulated, consider omitting allocated data since they weaken comparisons: the allocated cases will show random patterns, which will obscure any true relationship present. Also the allocated cases give a spurious impression of large sample sizes, where the actual sample may be much smaller.

Revisions. These matrices are revised for 1997 and future years. The previous matrices had been used since the 1980s, slightly revised from the ones used in the 1970s, which in turn appear to have been adapted from the Current Population Survey. The older matrices are shown in the Codebook Volume 1 pages 1-68 to 1-72. The purpose of the revision of allocation matrices has been to group similar homes together and avoid very small cells, where cases are few and far between. For information on the current construction of each matrix, please contact the American Housing Survey Branch of the Census Bureau at: ahsn@census.gov or 301-457-3235.

Keeping cells as large as possible, while making sure they contain homogeneous cases, means the cells are refreshed with new data as frequently as possible. This is important for two reasons. First, frequent refreshing of a cell keeps the donor record and the recipient record geographically close together, helping to control for climate, metropolitan status, cost of living, and other regional variations, since the cases are processed in geographic order. Second, frequent refreshing means very few donor records donate data to more than one recipient record, since the donor records are replaced frequently. Multiple donations raise variance significantly, since the donor record in effect gets its own weight plus the weight of each recipient record.

Standard matrix. Matrix E is used on most items. It is a general purpose classification, to be used when no special matrix has been designed. The revision of Matrix E is designed to make units in each cell be as homogeneous as possible on housing adequacy, date built, and income (income is not allocated from this matrix, but is a good proxy for some of the items that are).

To clarify terms, each matrix, like E, can be considered as two dimensional: the columns are defined (27 of them in matrix E), and there is a separate row for each variable to be allocated. Thus HEQUIP is allocated from one row of E, and HFUEL from another row. Each data record goes into just one column of the matrix, but it will donate data into many rows and may take data out of other rows whenever it has missing data. The definitions below only define the columns of each matrix. Rows are defined by the number of edits (given earlier) that specify "allocate using matrix E."

A previous version of Matrix E classified cells by tenure, by sex and race of head of household, and by number of units. The female, black and multi-family cells are generally small. There was very little difference between single family and multifamily units, once other factors were controlled. Presence of spouse distinguished homes better than sex of householder, and can usefully be combined with race, ethnicity and elderly status, since "socio-economically disadvantaged" groups often have similar housing conditions.

It was also very effective to distinguish in Matrix E by size of unit and cost. For size, units with zero, one or two bedrooms were similar and are grouped. Bedrooms are used instead of total rooms to avoid problems with all the component types that go into total rooms. Similarly, cost of renters is based on contract rent, to avoid problems with the various components of gross rent (selected monthly housing costs). The change in the cutoffs of value and rent with additional bedrooms approximates the differences among medians, by size. If narrower ranges of cost were used, there would have been somewhat better consistency in Matrix E, but with the disadvantage of more small cells.

Rooms. Matrix B, for rooms, is rearranged in the revision with less detail among small households and more detail by type of structure, since these groups had the most consistency for bedrooms and baths, the items that vary most in this matrix.

Costs. Matrix D, for utilities, is redesigned in terms of number of bedrooms and people, which distinguish utility costs better than race and sex. Increasing from one person to two or more adds about as much to electricity and gas cost as adding a bedroom. It does not seem to make much difference whether the extra person is a spouse, other adult or child. Increasing to three or more people does not have much additional effect. The effects may be different for water and trash, but these costs are so small it does not seem worthwhile to design, program and maintain special matrices for them. Matrix D also distinguishes when gas and electricity are the main heating fuel, versus when they are just used for other purposes (cooking, lighting, hot water). Oil and other fuels do not get this treatment, since they are insignificant except when they are the main heating fuel, and making a distinction would create many tiny cells.

Matrix H, to allocate amount of mortgage as fraction of value, is used differently from other matrices. Known loan amounts are subtracted from VALUE to get remaining equity, and a loan is allocated so it is the same fraction of this remaining equity in donor and recipient records. For example: the donor has three loans totaling 90 percent of value: 75 percent, 5 percent and 10 percent respectively. The recipient has VALUE=100,000, with 52,000 and 7,000 in the first two mortgages. The donor's third loan is $10/(100-75-5) = 10/20$ of the donor's remaining equity. The recipient's remaining equity is $100,000-52,000-7,000 = 41,000$, so the third loan is allocated as $10/20$ of $41,000 = 20,500$. The approach shown allows each loan to be allocated independently,

but keeps a reasonable and consistent total for all loans, relative to the value of the house. The alternatives of allocating each loan as a fraction of VALUE or of other mortgages would often create total allocated plus unallocated loans exceeding VALUE. Matrices for mortgage term and interest are broken by year, which is more significant than value of house. Secondary mortgages are few and quite homogeneous, both by year and by value of house, so they are not subdivided in the matrix.

If monthly payment is not known, it is not allocated, but rather calculated. If the monthly payment question is answered but the answer disagrees substantially with the calculated value, the answer is nevertheless kept since it is more likely to be right than the long list of items used in calculating the payment.

Income. Matrix G1 is used to allocate wages. Householders and spouses have similar wages, after controlling for sex of the earner and housing cost. Other relatives have similar incomes after controlling for age and housing cost. For these reasons, the relationship codes were collapsed. Age categories for children under 25 are now more detailed since this population is numerous and average income changes sharply with age. Cost of housing, a strong correlate of income, also has more detailed categories.

The Matrix G2 is used, to allocate presence of income sources (other than wages). Presence of Social Security and pensions is extremely correlated with age of the elder of the householder or spouse, rising significantly above age 50, and jumping at 62 and 65.

The Matrix G3 is used to allocate the amount of family income other than wages.

The Matrix G10 is used to allocate total income of non-relatives.

In general, the presence of children is a better predictor of welfare and alimony than household size. Age 35 is a better distinguishing level for the sources of income than 25. Couples combined with sex of householder is more powerful than sex alone. Some cells become very small, and so have been collapsed.

For persons who refuse to answer income, the questionnaire has a fallback question that asks whether total family income was over \$25,000 (LT25K). The matrices already discussed are allocated, ignoring this total, since each piece of income is allocated, and it may be high or low, independent of the total. Subdividing the matrices by high or low income would not help, since not all of a household's income is necessarily allocated, so the household's total could still be inconsistent. A multi-step edit is specified after the G matrices to force consistency: If the total already allocated agrees with LT25K, no further changes are needed. Also if just the unallocated amounts exceed \$25,000 and the family said the total was under \$25,000, the constraint on the total is ignored and the detailed sources of income is used. But if allocated amounts are the sole cause of a conflict with LT25K, this conflict is resolved by increasing or decreasing all the allocated amounts until consistency is reached. This creates a range of outcomes, rather than forcing people just below or above \$25,000 as has been done before.

As a measure of quality and respondent cooperation, the original answers to LT25K and INV20K are preserved, even if they are inconsistent.

Commuting and Movers. The Matrix JTW is used for commuting. The variable allocated would be minutes per mile, $\text{TIMEJ}(w)/\text{DISTJ}(w)$, so if either is reported, the other can be calculated from the allocation matrix. If both are missing, then $\text{TIMEJ}(w)$ is allocated from Matrix G1, along with the mode and carpool variables.

The previous approach used Matrix F to allocate location of previous residence. This is omitted from the revision, so numerous missing cases will be preserved in the final data, since the distribution of previous locations is not meaningful when it is imputed.

Revisions. The research on allocation matrices can be fine-tuned at any time to identify better patterns of homogeneous groups. The patterns themselves are unlikely to change in the next 10 to 20 years, but the whole approach may be slightly revised from year to year. For exact information on the construction of matrices in any particular year of the AHS, please contact the American Housing Survey Branch of the Census Bureau at: ahsn@census.gov or 301-457-3235.

Initialization. The matrices are initialized by running through the file once whenever any allocation matrix definition is changed. The final matrix contents can be stored and used as initial values. This simplifies maintenance, since the variables allocated by each matrix do not need to be mentioned in the matrix specifications, and can be changed in the edit specifications alone, with no concerns about keeping the matrix specifications consistent with the edit specifications.

A list of variables used to create each matrix is provided below.

Matrix A – To Impute Number of Units: Classify by Tenure, Vacancy and Number of Floors

- FLOORS
- ISTATUS
- TENURE
- VACANCY

Matrix B – To Impute Number of Rooms and Floors: Classify by Tenure, Vacancy, Structure and Household Size

- ISTATUS
- NUNIT2
- NUNITS
- PER
- TENURE
- VACANCY

Matrix D – To Impute Utility Costs: Classify by Tenure, Bedrooms, People and Main Heating Fuel

- BEDRMS
- HFUEL
- PER
- TENURE
- VACANCY

Matrix E – To Impute Most Items: Classify by Tenure, Householder Sex, Race, Ethnicity, Age, Cost and Type of Structure

- AGE
- BEDRMS
- FRENT
- ISTATUS
- NUNIT2
- RACE
- RENT
- SPAN
- SPOS
- TENURE
- VACANCY
- VALUE

Matrix G1 – To Impute Wages (and Total Income of Nonrelatives): Classify by Relationship, Tenure, Age, Sex, Race and Ethnicity

- AGE
- BEDRMS
- FRENT
- RACE
- RENT
- REL
- SEX
- SPAN
- TENURE
- VALUE

Matrix G2 – To Impute Presence of Income Sources Other than Wages and Social Security: Classify by Relationship, Tenure, Age, Sex, and Presence of Children

- AGE
- BEDRMS
- FRENT
- RACE
- RENT
- SEX
- SPOS
- TENURE

Matrix GA – To Impute Presence of Social Security: Classify by Older of Householder or Spouse

- AGE

Matrix G3 – To Impute Amount of Relatives' Income Other than Wages: Classify by Relationship, Tenure, Age, Sex, Presence of Children, and Presence of Income Sources

- AGE
- LT25K
- QALIM
- QBUS
- QDIV
- QINT
- QOTHER
- QRENT
- QWELF
- QWKCMP
- SEX
- SPOS
- TENURE
- ZINC

Matrix H – To Impute Amount Originally Borrowed: Classify by Number of Mortgages

- AMMORT
- AMMRT2-AMMRT3
- MATBUY
- VALUE

Matrix I – To Impute Years Needed to Pay off Mortgage and Interest Rate: Classify by Year Borrowed and Type of Mortgage

- Primary Mortgage
- Secondary Mortgage
- Year Borrowed
- Year of Survey

Matrix JTW – To Impute Time and Distance to Work: Classify by Mode of Transportation

- **TRAN**

Appendix E: Coding for Exclusion from Universes

Census uses blanking edits to indicate when values are “out of universe” or not present subject to certain conditions. This appendix contains the exact codings for these “out of universe” conditions. The following 15 variables are included in the Census codings but are not available in the public use file. For more information on them, please contact the Census Bureau.

Variables Listed in Codings For Exclusion from Universe Not in PUF

<i>Variable</i>	<i>Description</i>
GQINST	Defines units as being in group quarters or not and whether the group quarters are institutional (jails) or non-institutional (dorms)
FPHEQP	Determines if a fireplace is considered to be heating equipment.
HHMEM	Identifies if a current occupant is a household member.
INCSAM	Identifies whether a serial number is in sample for the first time, or is a returning case.
OWNLOT1	Determines if mobile home occupants own the land where the unit is sited.
OWNLOT2	Determines if a vacant or URE-occupied mobile home is on owned or rented land.
PEELRM	Determines which room has the most peeling paint (in the lead paint module)
PHAFLG	Identifies units that are part of a public housing authority. (This variable is not actually used.)
REPLHH	Identifies replacement households. (Used to create the SAMEHH Variable.)
RMOVM	Month of move for recent movers.
ROOM	Variable for room heaters as secondary equipment. (It is split into FLIN and FLOT.)
SPOUS	Line number of spouse.
SPOUS_FLG	Identifies if spouse is present in household.
SURVEYEAR	Identifies survey year.
TOTINC	Recode at time of interview for total family income. (Uses unedited data.)

Appendix G: Version History

Version	Date	Change
0.10	10/12/01	First public release
0.11	10/15/01	Addition of Survey year, Module source
0.15	10/17/01	Addition of unit of observation, identification of variable name if using the “single file” or “flattened” format version of the AHS. The single file format is similar to the 1995 and earlier versions of the AHS.
0.20	11/1/01	Addition of type (numeric/character), missing value codings, correction of numerous codings, first draft of Appendix A with definitions.
0.30	11/19/01	Addition of topcoding information, cross-reference of allocation flag variables, identification of 1998 MSA variables. Organization by topic area, including alphabetical list of variables and short descriptions, and topic list of variables and short descriptions. Comments for certain variables.
0.40	1/18/02	Addition of allocation matrix information, first round of universe restrictions, many little edits correcting typos, changing of abbreviations, etc.
0.50	2/4/02	Addition of “English” version of universe restrictions. Moving of coding of universe restrictions to an appendix. Many other little edits. Starting of inclusion of draft text for sections.
0.60	2/25/02	Editing of long descriptions, revised text, other edits.
0.70	5/13/02	Information on changes and variables in the 2001 data, minor edits.
1.00	6/20/02	Addition of some new 2001 variables, minor edits. The release of this version coincides with the release of 2001 AHS data.
1.10	12/18/02	Addition of information on new weighting variable, WGT90GEO, and numerous other edits.
1.20	07/08/03	Added information on 2002 MSA variables, and minor edits.

1.50	09/11/03	Added documentation about topcoding and other confidentiality measures that occur on the AHS public use files.
1.60	6/01/04	Addition of new 2003 variables, minor edits. The release of this version coincides with the release of the 2003 AHS data.
1.75	9/23/04	Addition of income limit variables, minor edits.
1.77	12/30/2004	Updated module information for income limit variables (Appendix F), and added specific information on REGION variable.
1.78	7/13/2005	Addition of 2004 MS variables, minor edits including revised contact information. The release of this version closely follows the release of the 2004 MS dataset of the AHS.
1.8	10/04/06	Addition of new 2005 variables, minor edits

Appendix H: Merging Files Examples

Note: This information is only relevant for users not using the “flat-file” version.

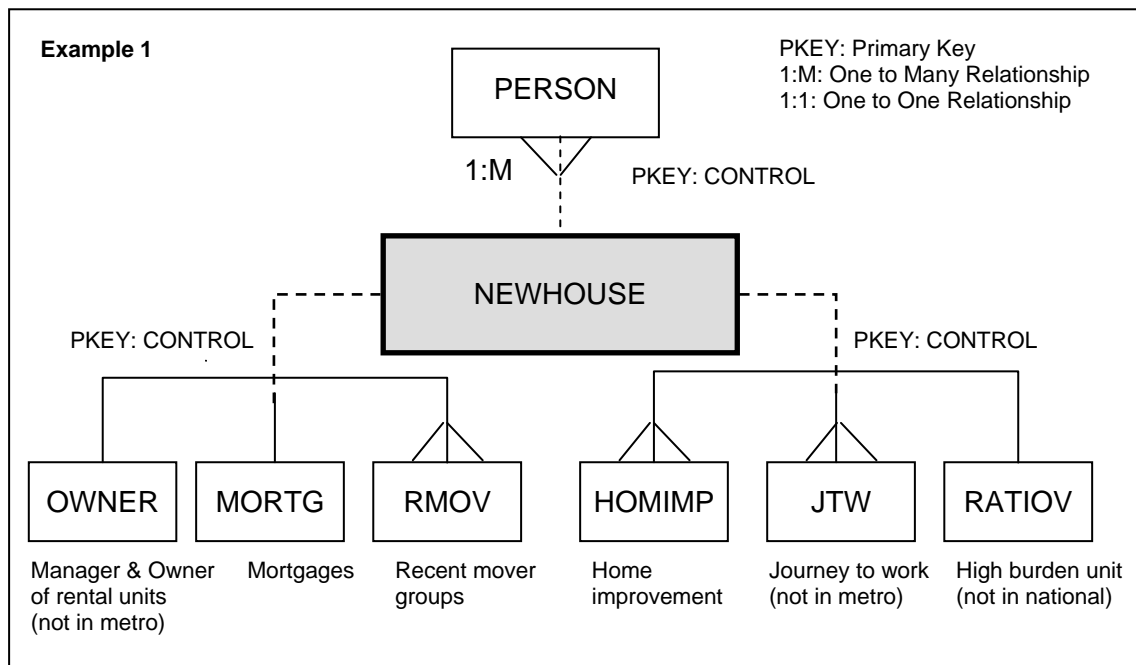

The standard distribution of the AHS is as a single SAS transport data file which contains multiple component files. HUD also makes the data available in this format as an ASCII or text file.

Many users of the AHS use the “flat file” version of the file, which is the distribution from the Census Bureau which the user then runs the “file flattening” program on. That SAS program converts the data into a single file format with each observation representing one household. This flat file was designed to be very similar to the AHS data structure before 1997.

This section describes the data structure for the AHS when using the data in its “native” distribution format – not converted to a flat file. There are also some brief examples of how certain data can be merged together for common tasks. These examples only provide a short summary of the logic behind merging the files together and not the exact code. In all examples, the shaded boxes are the files used in merging.

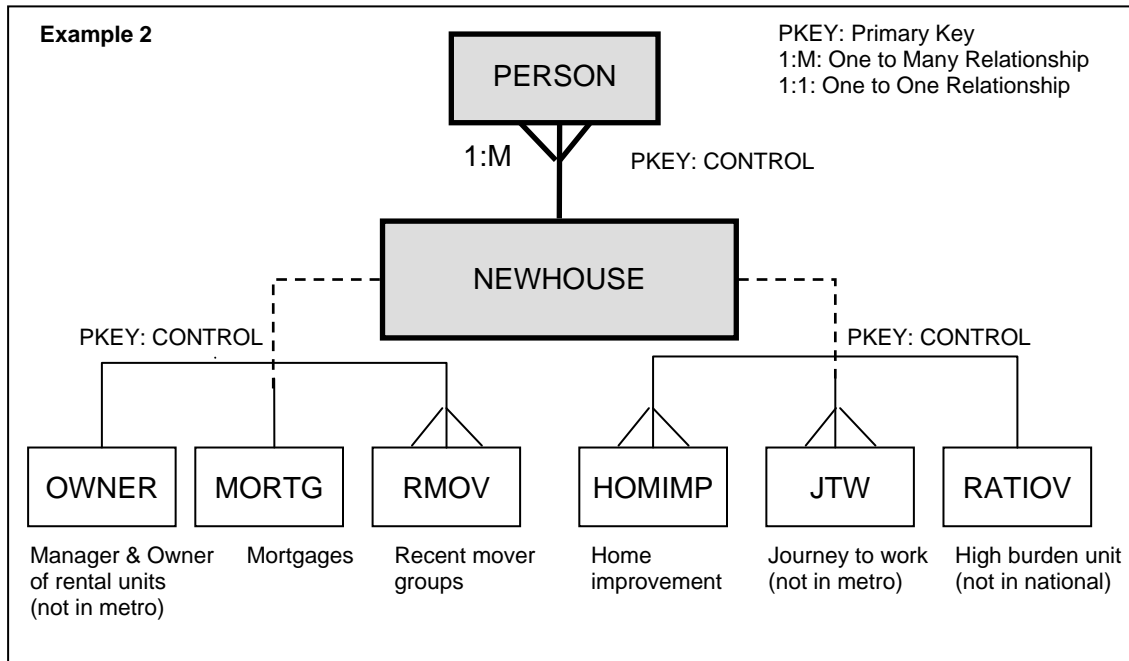

Example 1: Count of number of occupied units

Number of units can be estimated by summing the WEIGHT variable for all observations which have STATUS=1. This requires only the NEWHOUSE file, and no other files.

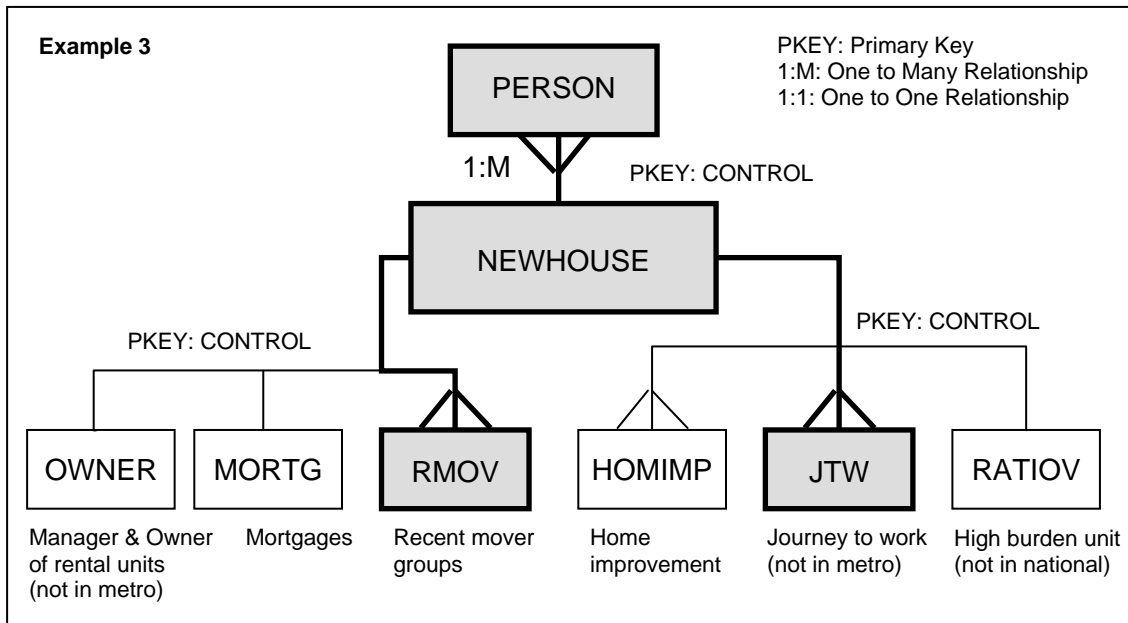

Example 2: Count of number of households with children under 6

To estimate the number of households with children under 6, first use the PERSON file and limit the data based on the AGE variable to less than 6. Then restrict the data to only one case per household – this prevents double counting households with multiple children under six. Then match the remaining records to the NEWHOUSE file. For those records that matched, sum the weights to come up with the total estimate of number of households with children under 6.

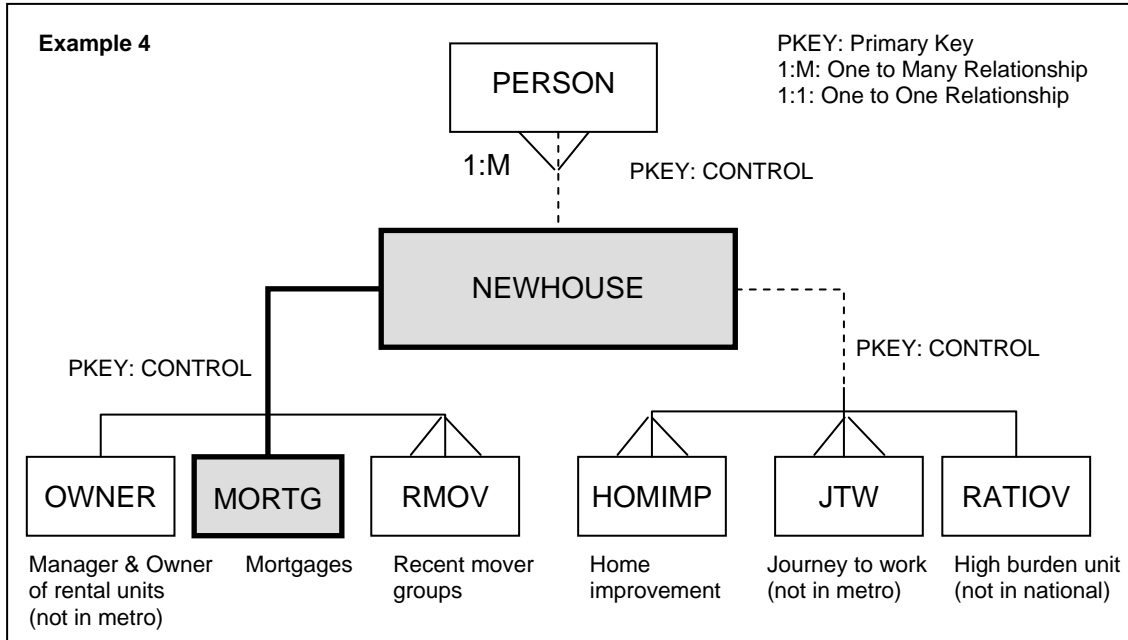

Example 3: Commuting patterns of people who moved recently

First use the RMOV file to limit the sample to households who have moved recently. Using that subsample, match to the NEWHOUSE, only keeping cases in both datasets. As a second step, merge PERSON and JTW by the CONTROL and PLINE data. Then merge the “recent movers” from the first step with the combined PERSON and JTW from the second step, only keeping the housing units that were present in the first file. The result will be a dataset of commuting information for households who have moved recently.

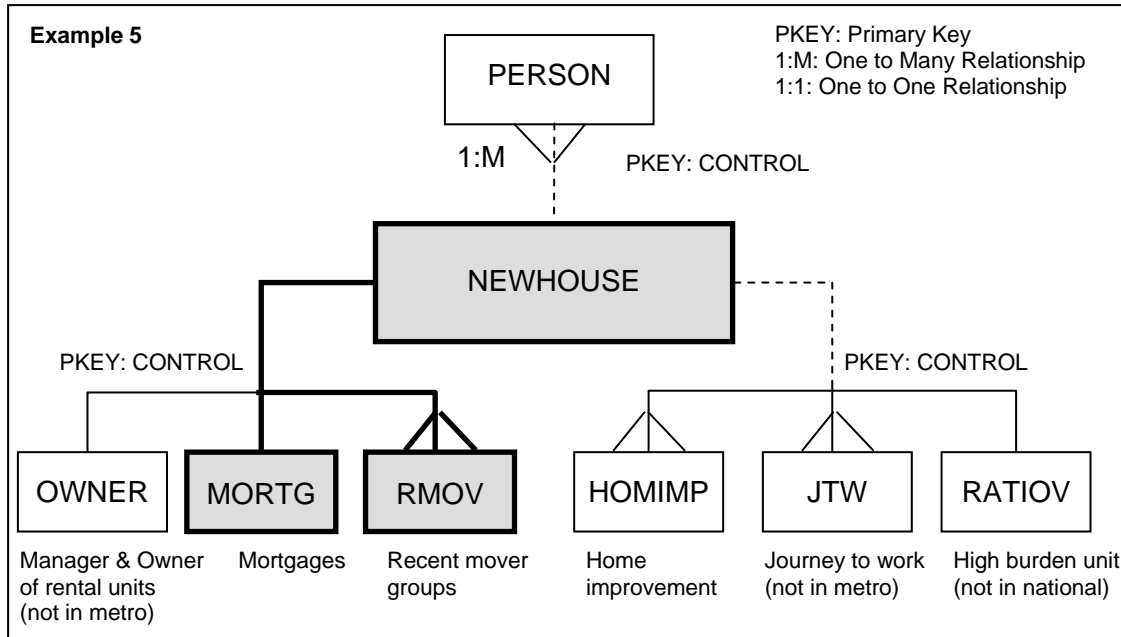

Example 4: Count of number of units with HELOCs

Using the MORTG file, limit the data to households with Home Equity Line of Credit (HELOC). Merge that subsample with the NEWHOUSE file, only keeping the households from the subsample. Then sum the WEIGHT variable to get the estimate of the total number of units with HELOCs.

Example 5: Characteristics of mortgages for recent movers

First use the RMOV file to limit to households who have moved recently. Then merge this subsample to the NEWHOUSE, only keeping observations from the subsample. Finally merge on the MTG data, again only keeping observations from the subsample.
