B. GAS SUPPLY PIPING - Piping systems shall stand a pressure of at least six inches mercury or three PSI gage for a period of not less than ten minutes without showing any drop in pressure. Pressure shall be measured with a mercury manometer or slope gage calibrated so as to be read in increments of not greater than one-tenth pound, or an equivalent device. The source of pressure shall be isolated before the pressure tests are made. Before a test is begun, the temperature of the ambient air and of the piping shall be approximately the same, and constant air temperature be maintained throughout the test. When appliances are connected to the piping system, the entire system shall be pressurized to not less than 10 inches nor more than 14 inches water column and the appliance connections tested for leakage with soapy water or bubble solution. YES NO NOT APPLICABLE FEDERAL STATUTES PROVIDE SEVERE PENALTIES FOR ANY FRAUD, INTENTIONAL MISREPRESENTATION OR CRIMINAL CONNIVANCE OR CONSPIRACE PURPOSED TO INFLUENCE THE ISSUANCE OF ANY GUARANTY OR INSURANCE OR THE GRANTING OF ANY LOAN BY THE SECRETARY. I certify that I have carefully inspected the above system in which I have no interest present or prospective and that I have reported herein all observed conditions.	FUE	CASE NO.
