

Basic Air Traffic Control Sector Instructional Checkout

(BASIC)

Version 1.0
May 9, 2007

A component of:

SIGNAL

Simulation and Integration of Ground, Network, and Air Links

Status:

Operational

Connections:

BASIC connects to charter as a client.

Overview:

This projects goal was to allow the US Air Force to train their ATC personnel for deployment at the Baghdad airport in Iraq during the early stages of the Iraq War. The simulator generates a very basic radar presentation which displays limited information about the radar contacts consisting of Beacon, Speed and Altitude. The simulation also has a representation of an analog radar sweep.
