

environments and all potential cleanup methods for sediment and to improve national consistency in decision-making for sediment sites. It is primarily intended for project managers considering remedial response actions or non-time-critical removal actions under CERCLA, or more commonly known as Superfund, although technical aspects of the guidance are also intended to assist project managers addressing sediment contamination under RCRA.

Following the introductory chapter (Chapter 1), the guidance presents information concerning sediment-specific considerations during the Remedial Investigation (Chapter 2) and the Feasibility Study (Chapter 3); information concerning evaluation of the three major cleanup methods for sediment, Monitored Natural Recovery, In-Situ Capping, and Dredging and Excavation (Chapters 4, 5 and 6); information about selecting sediment remedies (Chapter 7) and about monitoring sediment sites (Chapter 8). Although some issues concerning site characterization and risk are discussed early in the guidance, the emphasis of this guidance is on evaluating and selecting cleanup methods for contaminated sediment.
