## MASS LAYOFFS IN FEBRUARY 2004

In February 2004, there were 941 mass layoff actions by employers, as measured by new filings for unemployment insurance benefits during the month, according to data from the U.S. Department of Labor's Bureau of Labor Statistics. Each action involved at least 50 persons from a single establishment, and the number of workers involved totaled 84,201. (See table 1.) The number of events was the lowest for any February since 1997, and the number of initial claims was the lowest for any February since 1998. Both the number of events and initial claims were sharply lower than a year ago, and the over-the-year declines were the largest for a February since the program began in April 1995.

## Industry Distribution

Temporary help services, with 6,953 initial claimants, and motion picture and video production, with 3,967 initial claimants, together accounted for 13 percent of all initial claims in February. (See table A.) The 10 industries reporting the highest number of mass-layoff initial claims accounted for 27,989 initial claims in February, 33 percent of the total.

The manufacturing sector had 26 percent of all mass layoff events and 27 percent of all initial claims filed in February, both being the smallest shares for any February on record. A year ago, manufacturing reported 32 percent of events and 39 percent of initial claims. Within manufacturing, the number of claimants was highest in food processing ( 6,517 , mainly in fruit and vegetable canning), followed by transportation equipment $(2,671)$ and electrical equipment and appliances $(2,109)$. (See table 2.)

The administrative and waste services sector accounted for 15 percent of events and 13 percent of initial claims filed in February, with layoffs mostly in temporary help services. Eleven percent of all layoff events and initial claims filed during the month were in retail trade, especially in discount department stores, which recorded a series peak for February. Construction accounted for an additional 14 percent of events and 10 percent of initial claims during the month, primarily among specialty trade contractors.

Government establishments accounted for 4 percent of events and initial claims filed during the month, particularly in educational services. Government accounted for its largest share of events and initial claims for any February on record.

Compared with February 2003, the largest decreases in initial claims were reported in transportation equipment manufacturing $(-7,864)$, administrative and support services $(-4,648)$, and machinery manufac-

Table A. Industries with the largest mass-layoff initial claims in February $2004{ }^{\text {p }}$

$\mathrm{p}=$ preliminary.
turing (-3,404). The largest over-the-year increases in initial claims were reported in motion picture and sound recording $(+1,632)$ and in general merchandise stores $(+1,434)$.

## Geographic Distribution

Among the four regions, the highest number of initial claims in February due to mass layoffs was reported in the West, 34,453. (See table 3.) Administrative and support services and motion picture and sound recording industries accounted for 24 percent of all initial claims in that region during the month. The Midwest region was next, with 19,183 initial claims, followed by the South, with 17,770, and the Northeast, with 12,795.

The number of initial claimants in mass layoffs declined over the year in all four of the regions, with the largest decrease in the South $(-15,107)$. Eight of the nine geographic divisions had over-the-year decreases in the number of initial claims associated with mass layoffs, with the largest decreases in the Middle Atlantic $(-11,059)$ and Pacific $(-10,543)$ divisions. The New England division reported the only increase in masslayoff initial claims (+563).

Among the states, California recorded the largest number of initial claims filed in mass layoff events in February, 29,865, mostly in motion picture and sound recording industries and administrative and support services. Ohio reported 4,142 initial claims, followed by Illinois $(4,108)$ and Texas $(4,062)$. These four states accounted for 54 percent of all layoff events and 50 percent of all initial claims for unemployment insurance. (See table 4.)

California reported the largest over-the-year decrease in the number of initial claims ( $-8,869$ ), followed by Pennsylvania $(-8,383)$ and Texas $(-6,272)$. The largest over-the-year increase occurred in Tennessee (+927).

## Note

The monthly data series in this release cover mass layoffs of 50 or more workers beginning in a given month, regardless of the duration of the layoffs. Information on the length of the layoff is obtained later and issued in a quarterly release that reports on mass layoffs lasting more than 30 days (referred to as "extended
mass layoffs"). The quarterly release provides more information on the industry classification and location of the establishment and on the demographics of the laid-off workers. Because monthly figures include shortterm layoffs of 30 days or less, the sum of the figures for the 3 months in a quarter will be higher than the quarterly figure for mass layoffs of more than 30 days. (See table 1.) See the Technical Note for more detailed definitions.

The report on Mass Layoffs in March 2004 is scheduled to be released on Thursday, April 22, 2004.

NOTE: Due to budget constraints in the Mass Layoff Statistics (MLS) program, beginning with data for the first quarter of 2004, the scope of quarterly extended mass layoffs and plant closings, regularly reported in the release, Extended Mass Layoffs in (Quarter), has been redefined to cover only the private nonfarm economy. Quarterly information on layoff events in agriculture and government will no longer be collected. However, the monthly reporting of the MLS program in the release, Mass Layoffs in (Month), which is based only on administrative data, will be unaffected and will continue to cover the total economy.

## Technical Note

The Mass Layoff Statistics (MLS) program is a federal-state program that uses a standardized, automated approach to identifying, describing, and tracking the effects of major job cutbacks, using data from each state's unemployment insurance database. Each month, states report on establishments which have at least 50 initial claims filed against them during a consecutive 5 -week period. These establishments then are contacted by the state agency to determine whether these separations lasted 31 days or longer, and, if so, other information concerning the layoff is collected. States report on layoffs lasting more than 1 month on a quarterly basis.

A given month contains an aggregation of the weekly unemployment insurance claims filings for the Sunday through Saturday weeks in that month. All weeks are included for the particular month, except if the first day of the month falls on Saturday. In this case, the week is included in the prior month's tabulations. This means that some months will contain 4 weeks and others 5 weeks, and the number of weeks in a given month may be different from year to year. Therefore,
analysis of over-the-month and over-the-year change should take this calendar effect into consideration.

The MLS program resumed operations in April 1995 after it had been terminated in November 1992 due to lack of funding. Prior to April 1995, monthly layoff statistics were not available.

Information in this release will be made available to sensory impaired individuals upon request. Voice phone: 202-691-5200; TDD message referral phone number: 1-800-877-8339.

## Definitions

Initial claimant. A person who files any notice of unemployment to initiate a request either for a determination of entitlement to and eligibility for compensation, or for a subsequent period of unemployment within a benefit year or period of eligibility.

Mass layoff event. Fifty or more initial claims for unemployment insurance benefits filed against an establishment during a 5-week period, regardless of duration.
