

# 1992 Enterprise Statistics

---

ES92-1

## Company Summary

---

# Acknowledgments

Many persons participated in various activities of the 1992 Enterprise Statistics program. Primary direction was performed by **Frederick T. Knickerbocker**, Associate Director for Economic Programs; and **Thomas L. Mesenbourg**, Assistant Director for Economic Programs.

This report was prepared in the Agriculture and Financial Statistics Division under the general direction of **Dr. Ewen M. Wilson**, Chief; and **Ruth A. Runyan**, Assistant Division Chief for Financial Statistics.

The overall project development and planning of this report were under the direction of **Eddie J. Salyers**, Chief, Company Statistics Branch. Staff assistance was provided by **Ahmad Bakhshi, Barbara Boney, Elaine Emanuel, Barbara Esworthy, Donna Hambric, Durwin Knutson, Sungsoo Oh, Patricia Patriarca, John Seabold, and Phil Thompson.**

Systems and procedures for mailout, receipt, correspondence, data input, industry classification, other clerical processing, administrative record processing, quality control, and the associated electronic computer programs were developed in the Economic Planning and Coordination Division.

The computer processing systems were developed and coordinated in the Economic Statistical Methods and Programming Division, under the general supervision of **Charles P. Pautler, Jr.**, Chief; and **Martin S. Harahush**, Assistant Division Chief for Quinquennial Programs; with assistance from **Steven G. McCraith**, Chief, Quinquennial Surveys Branch. **Daniel A. Vacca** was assigned primary programming responsibility with assistance from **Scott Ankers, Edward Carr, Janet Contee, Frank Frederick, Sheryl Garrett, Stephen D. Jarvis, Ai-Linh Nguyen, James R. Parker, Jr., Robert Penrod, Jerry W. Richards, and Judy Wang.**

General purpose programs for editing and interactive processing developed in the Statistical Research Division were adapted for the Enterprise Statistics program by **Dave Paletz** under the direction of **Tom Petkunas** and **William Winkler**. Imputation modules for editing were developed by **Dave Paletz**.

Mailout preparation and receipt operations, clerical and analytical review activities, data keying, and geocoding review were performed by the staff of the Data Preparation Division, **Judith N. Petty**, Chief.

Geographic coding procedures and associated computer programs were developed by the staff of the Geography Division, **Joel L. Morrison**, Chief.

Computer processing was performed in the Computer Services Division, **Debra D. Williams**, Chief.

The staff of the Administrative and Customer Services Division, **Walter C. Odom**, Chief, performed planning, design, composition, editorial review, and printing planning and procurement for publications and report forms. **Bernadette J. Gayle** provided publication coordination and editing.

Special acknowledgment is also due the many businesses whose cooperation has contributed to the publication of the data.

If you have any questions concerning the statistics in this report, call 301-763-7234.

# Publication Program

## 1992 ENTERPRISE STATISTICS

The enterprise census is taken once every 5 years. Similar programs were conducted by the Bureau of the Census in the 1954, 1958, 1963, 1967, 1972, 1977, 1982, and 1987 Economic Censuses. The enterprise statistics program covers all companies and their establishments in nearly all sectors of the economy, including:

- Mining
- Construction
- Manufacturing
- Transportation, communications, and utilities
- Wholesale trade
- Retail trade
- Finance, insurance, and real estate
- Services

Essentially, the enterprise statistics program involves aggregating the census data records of establishments that are under common ownership or control and assigning company codes to show various economic characteristics of the firms that own or control the establishments.

## Company Summary—ES92-1

This report presents data on structural patterns of American industrial organization in terms of the primary industrial activity of companies; their employment, annual payroll, and sales size; their geographic location; and other characteristics for all 1992 census-reporting firms and the establishments they own or control. Additional data are available for companies with 500 or more employees covered in the 1992 Economic Census. For these large companies, national-level figures are provided by company

industry classification on number of companies, number of employees, number of establishments, annual payroll, sales and receipts, inventories, capital expenditures, assets, depreciation charges, and selected operating expenses. Table 6 presents data on separately reported auxiliary units of multiestablishment firms covered in the 1992 Economic Census.

## Electronic Media

All data included in the printed report are available on CD-ROM. Electronic media products are available for users who wish to summarize, rearrange, or process large amounts of data. These products, with corresponding technical documentation, are sold by Customer Services, Bureau of the Census, Washington, DC 20233-1900.

The **Internet** ([www.census.gov](http://www.census.gov)) highlights selected information from Bureau of the Census publications. This enables immediate access to recently released facts and data. Various subjects and topics are included on this electronic resource.

For system technical assistance, or questions regarding the sale or availability of electronic products, contact Administrative and Customer Services Division, 301-457-4100.

## OTHER ECONOMIC CENSUS REPORTS

Data on retail trade, wholesale trade, financial, insurance, real estate, construction industries, manufactures, mineral industries, transportation, communications, utilities, minority-owned business enterprises, and women-owned businesses also are available from the 1992 Economic Census. A separate series of reports covers the census of outlying areas: Puerto Rico, Virgin Islands of the United States, Guam, and the Northern Marianas. Separate announcements describing these reports are available free of charge from Customer Services, Bureau of the Census, Washington, DC 20233-1900.

**If you have any questions concerning the sale or availability of publications or electronic products, call Customer Services, 301-457-4100.**

# Introduction to the Economic Census

---

## PURPOSES AND USES OF THE ECONOMIC CENSUS

The economic census is the major source of facts about the structure and functioning of the Nation's economy. It provides essential information for government, business, industry, and the general public.

The economic census furnishes an important part of the framework for such composite measures as the gross domestic product, input/output measures, production and price indexes, and other statistical series that measure short-term changes in economic conditions.

Policymaking agencies of the Federal Government use the data, especially in monitoring economic activity and providing assistance to business.

State and local governments use the data to assess business activities and tax bases within their jurisdictions and to develop programs to attract business.

Trade associations study trends in their own and competing industries and keep their members informed of market changes.

Individual businesses use the data to locate potential markets and to analyze their own production and sales performance relative to industry or area averages.

## AUTHORITY AND SCOPE

Title 13 of the United States Code (sections 131, 191, and 224) directs the Census Bureau to take the economic census every 5 years, covering years ending in 2 and 7. The 1992 Economic Census consists of the following eight censuses:

- Census of Retail Trade
- Census of Wholesale Trade
- Census of Service Industries
- Census of Financial, Insurance, and Real Estate Industries
- Census of Transportation, Communications, and Utilities
- Census of Manufactures
- Census of Mineral Industries
- Census of Construction Industries

ENTERPRISE STATISTICS

Special programs also cover enterprise statistics and minority-owned and women-owned businesses. (The 1992 Census of Agriculture and 1992 Census of Governments are conducted separately.) The next economic census is scheduled to be taken in 1998 covering the year 1997.

## AVAILABILITY OF THE DATA

The results of the economic census are available in printed reports for sale by the U.S. Government Printing Office and on compact discs for sale by the Census Bureau. Order forms for all types of products are available on request from Customer Services, Bureau of the Census, Washington, DC 20233-8300. A more complete description of publications being issued from this census is on the inside back cover of this document.

Census facts are also widely disseminated by trade associations, business journals, and newspapers. Volumes containing census statistics are available in most major public and college libraries. Finally, State data centers in every State as well as business and industry data centers in many States also supply economic census statistics.

## WHAT'S NEW IN 1992

The 1992 Economic Census covers more of the economy than any previous census. New for 1992 are data on communications, utilities, finance, insurance, and real estate, as well as coverage of more transportation industries. The economic, agriculture, and governments censuses now collectively cover nearly 98 percent of all economic activity.

Among other changes, new 1992 definitions affect the boundaries of about a third of all metropolitan areas. Also, the Survey of Women-Owned Businesses has now been expanded to include all corporations.

## HISTORICAL INFORMATION

The economic census has been taken as an integrated program at 5-year intervals since 1967 and before that for 1963, 1958, and 1954. Prior to that time, the individual subcomponents of the economic census were taken separately at varying intervals.

INTRODUCTION 1

The economic census traces its beginnings to the 1810 Decennial Census, when questions on manufacturing were included with those for population. Coverage of economic activities was expanded for 1840 and subsequent censuses to include mining and some commercial activities. In 1902, Congress established a permanent Census Bureau and directed that a census of manufactures be taken every 5 years. The 1905 Manufactures Census was the first time a census was taken apart from the regular every-10-year population census.

The first census of business was taken in 1930, covering 1929. Initially it covered retail and wholesale trade and construction industries, but it was broadened in 1933 to include some of the service trades.

The 1954 Economic Census was the first census to be fully integrated—providing comparable census data across economic sectors, using consistent time periods, concepts, definitions, classifications, and reporting units. It was the first census to be taken by mail, using lists of firms provided by the administrative records of other Federal agencies. Since 1963, administrative records also have been used to provide basic statistics for very small firms, reducing or eliminating the need to send them census questionnaires. The Enterprise Statistics Program, which publishes combined data from the economic census, was made possible with the implementation of the integrated census program in 1954.

The range of industries covered in the economic censuses has continued to expand. The census of construction industries began on a regular basis in 1967, and the scope of service industries was broadened in 1967, 1977, and 1987. The census of transportation began in 1963 as a set of surveys covering travel, transportation of commodities, and trucks, but expanded in 1987 to cover business establishments in several transportation industries. For 1992, these statistics are incorporated into a broadened census of transportation, communications, and utilities. Also new for 1992 is the census of financial, insurance, and real estate industries. This is part of a gradual expansion in coverage of industries previously subjected to government regulation.

The Survey of Minority-Owned Business Enterprises was first conducted as a special project in 1969 and was incorporated into the economic census in 1972 along with the Survey of Women-Owned Businesses.

An economic census has also been taken in Puerto Rico since 1909, in the Virgin Islands of the United States and Guam since 1958, and in the Commonwealth of the Northern Mariana Islands since 1982.

Statistical reports from the 1987 and earlier censuses provide historical figures for the study of long-term time series and are available in some large libraries. All of the census data published since 1967 are still available for sale on microfiche from the Census Bureau.

## **AVAILABILITY OF MORE FREQUENT ECONOMIC DATA**

While the census provides complete enumerations every 5 years, there are many needs for more frequent data as well. The Census Bureau conducts a number of monthly, quarterly, and annual surveys, with the results appearing in publication series such as Current Business Reports (retail and wholesale trade and service industries), the Annual Survey of Manufactures, Current Industrial Reports, and the Quarterly Financial Report. Most of these surveys, while providing more frequent observations, yield less kind-of-business and geographic detail than the census. The County Business Patterns program offers annual statistics on the number of establishments, employment, and payroll classified by industry within each county.

## **SOURCES FOR MORE INFORMATION**

More information about the scope, coverage, classification system, data items, and publications for each of the economic censuses and related surveys is published in the *Guide to the 1992 Economic Census and Related Statistics*. More information on the methodology, procedures, and history of the census will be published in the *History of the 1992 Economic Census*. Contact Customer Services for information on availability.

# Enterprise Statistics

---

## GENERAL

The 1992 Enterprise Statistics Company Summary report is based on data collected in the 1992 Censuses of Wholesale Trade; Retail Trade; Service Industries; Manufactures; Mineral Industries; Construction Industries; Transportation, Communications, and Utilities; and Finance, Insurance, and Real Estate.

The 1992 Company Summary includes: company summary tables; auxiliary establishment tables; and large company tables. In 1987 these were three separate publications; prior to 1987 the Company Summary was called the General Report on Industrial Organization. Table 1. Company Statistics—United States, provides general non-employer data. Only employer (employing) firms were included for all other tables.

Company summary tables are based on responses from the many different 1992 Economic Census report forms. Each of the economic census questionnaires includes several general questions such as kind-of-business classification, dollar volume of business, number of employees, amount of payroll, and company affiliation. This report presents these census data collected for establishments (i.e., individual stores, factories, mines, etc.) aggregated to the company level, using the company affiliation information obtained from each business and industrial firm covered in the 1992 Economic Census. Virtually all economic census publications present information only for establishments. This publication, however, is unique among census reports in that it provides data for entire companies and their owned establishments. An establishment is defined as a business or industrial unit at a single physical location which produces or distributes goods or performs services. A company is a business organization consisting of all establishments under common ownership or control. The resulting tables furnish comprehensive data on the industrial organization and size of all census reporting firms and the establishments they own or control.

The auxiliary establishment table presents data on separately reported auxiliary units of multiestablishment firms. The primary functions of these establishments are to manage, administer, service, or support the activities of the other establishments of the company. The table furnishes statistics of auxiliaries by industry classification of the owning company and the type of management or supporting service function they provide.

Large company data are based on responses from a separate 1992 economic census report form sent to companies with 500 employees or more. The resulting table shows selected financial statistics of large companies.

## CENSUS DISCLOSURE RULES

In accordance with Federal law governing census reports, no data are published that would disclose the operations of an individual establishment or business. However, the number of establishments in a classification is not considered a disclosure, so this information may be released even though other information is withheld.

## GEOGRAPHIC AREAS COVERED

Data are provided at the National level only, except table 3 which provides company statistics by State.

## DOLLAR VALUES

Monetary values provided in electronic files are presented in thousands. Monetary values provided in printed publications are in millions. All dollar values presented are expressed in current dollars. Consequently, when making comparisons to prior years, inflation of values should be considered.

## RELIABILITY OF DATA

All data compiled in this report originated from either census questionnaires or administrative records of other Federal agencies and, therefore, are not subject to sampling errors. However, the data are subject to nonsampling errors. Nonsampling errors can be attributed to many sources: inability to identify all cases in the actual universe; definition and classification difficulties; differences in the interpretation of questions; errors in recording or coding the data obtained; and other errors of collection, response, coverage, and estimation for missing or misreported data. The accuracy of these tabulated data is determined by the joint effects of the various nonsampling errors. No direct measurement of these effects has been obtained except for estimation for missing or misreported data; however,

precautionary steps were taken in all phases of the collection, processing, and tabulation of the data in an effort to minimize the effects of nonsampling errors.

The Bureau of the Census obtains electronic files with limited information extracted from administrative records of other Federal agencies. This information is used in conjunction with other information available to the Census Bureau to develop estimates for small employers and other establishments for which responses were not received in time for publication.

## SPECIAL TABULATIONS

Special tabulations of data collected in the 1992 Economic Census may be obtained, depending on availability of time and personnel, on diskette, computer tape, or in tabular form. The data will be in summary form and subject to the same rules prohibiting disclosure of confidential information (including name, address, kind of business, or other data for individual business establishments or companies) as are the regular publications.

Special tabulations are prepared on a cost basis. A request for a cost estimate, as well as exact specifications on the type and format of the data to be provided, should be directed to the Chief, Company Statistics Branch, Agriculture and Financial Statistics Division, Bureau of the Census, Washington, DC 20233-6400.

## ABBREVIATIONS AND SYMBOLS

The following abbreviations and symbols are used in this publication:

Elec	Pub	Text
	-	Represents zero.
D	(D)	Data withheld to avoid disclosing operations of individuals.
N	(NA)	Data not available.
S	(S)	Data withheld because estimate did not meet standards.
X	(X)	Not applicable.
Z	(Z)	Less than half the unit shown.
	n.e.c.	Not elsewhere classified.
	LIFO	Last in, first out.
	SIC	Standard industrial classification.

### Employment Size Symbols

Elec	Pub	Text
a	A	Less than 20 employees
b	B	20 to 99 employees
c	C	100 to 249 employees
e	E	250 to 499 employees
f	F	500 to 999 employees
g	G	1,000 to 2,499 employees
h	H	2,500 to 4,999 employees
i	I	5,000 to 9,999 employees
j	J	10,000 to 24,999 employees
k	K	25,000 to 49,999 employees
l	L	50,000 to 99,999 employees
m	M	100,000 employees or more

# SUMMARY OF FINDINGS

## SCOPE OF THIS REPORT

This report displays data collected for 4,610,829 companies with payroll and within the scope of the 1992 Economic Census. An indication of the extent of coverage of the Enterprise Statistics program is presented in table 1, which contains summary data for virtually the entire business universe. In 1992, 19,685,104 companies were included in the United States business universe with employment for all companies included in this universe of 92.4 million. Most of the companies not in the scope of the economic universe do not meet the employment criteria.

## INDUSTRY CHARACTERISTICS

In 1992, there were 4,610,829 companies within the scope of the economic censuses that employed 86.9 million people. The service sector made up the largest single component accounting for 37 percent of the total number of companies in the universe. The retail sector was next with 23 percent of the total. The manufacturing sector accounted for only 7 percent of the total number of companies, but it led all sectors with 28 percent of sales and receipts.

The Eating and Drinking Places at the enterprise industry category level (EIC 58) employed the greatest number of people, 6,643,633, while Grocery Stores (EIC 54.1) had the largest volume of sales and receipts with approximately \$360 billion. The ten enterprise industry categories accounting for the largest dollar volume of sales and receipts for companies in 1992 are summarized in table A.

Table A. **Ten Largest Enterprise Industry Categories in Sales and Receipts: 1992**

EIC code	Enterprise industry code	Sales and receipts (mil. dol.)
54.1	Grocery stores	359,479.6
51.4	Groceries and related products	354,583.7
55.1	New and used car dealers	346,717.2
60.2	Commercial banks	340,373.6
63.1	Life insurance	313,992.6
63.9	Insurance carriers, n.e.c.	301,230.8
37.1	Motor vehicles and equipment	295,809.6
80.6	Hospitals	280,966.6
15	General building contractors	217,550.6
58	Eating and drinking places	213,404.9

## SIZE OF FIRM

Over 98 percent of all companies covered in the 1992 Economic Census had less than 100 employees.

Companies primarily classified in construction, wholesale trade, and service industries with less than 100 employees accounted for more than 56 percent of the receipts in these areas. By contrast, less than 12 percent of the manufacturing division sales were generated by companies employing fewer than 100 employees, while 71 percent of their total sales and receipts came from companies with over 1,000 employees. See figure 1 for a percentage distribution of companies and their sales and receipts by employment size classes.

## ANNUAL PAYROLL

Payroll per employee varied markedly across industries and by company size. Companies with receipts of greater than \$1 billion a year paid their employees an average of \$30,771, while companies with receipts of less than \$1 million paid their employees an average of only \$15,512 per year. Mineral industries recorded the highest payroll per employee at \$34,286 followed by finance, insurance, and real estate with \$31,561. At the other end of the spectrum, retail trade companies averaged just \$13,152 per employee. See figure 2 for average annual payroll per employee by industry section.

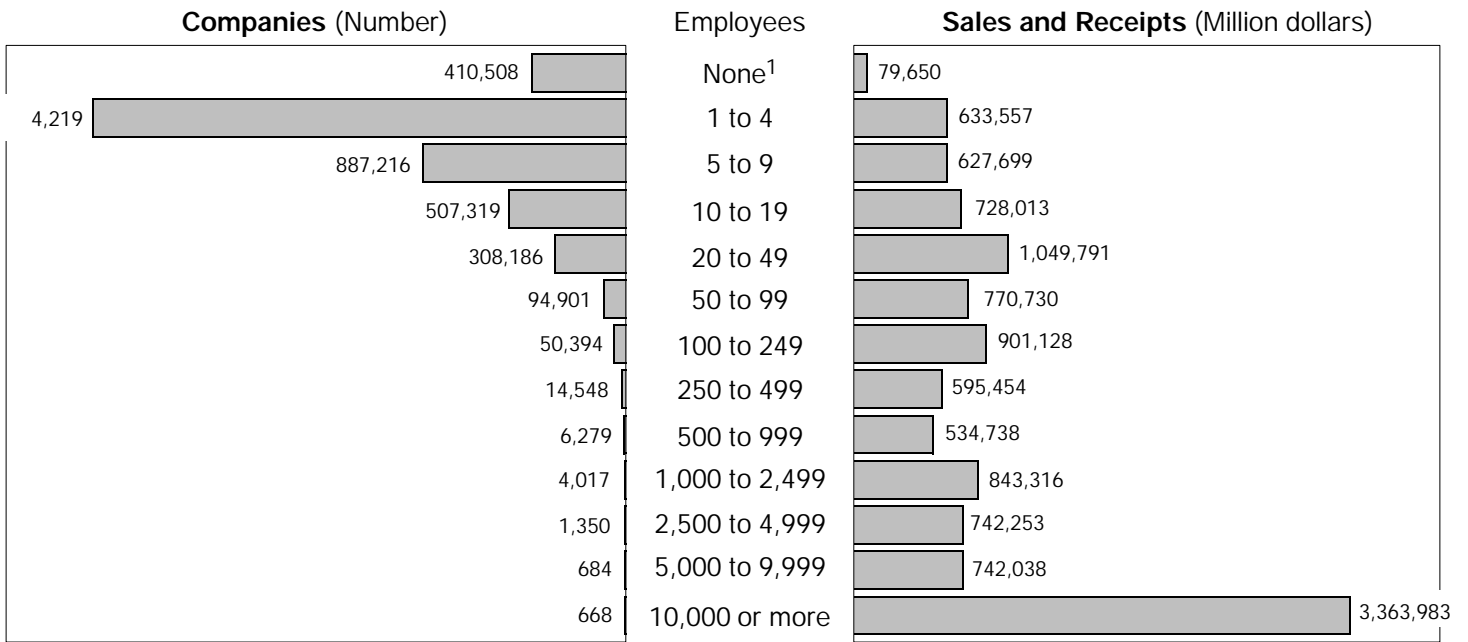

## GEOGRAPHIC CHARACTERISTICS

California had the largest number of companies with 568,686 and also employed the largest number of employees, 9.6 million. These companies operated 690,960 establishments in California. New York was second in number of companies with 371,479. Table B shows the number of companies and the total employment figures for the top ten ranking states in the nation.

Table B. **Employment for the Ten Largest States in the Nation Ranked by the Number of Companies: 1992**

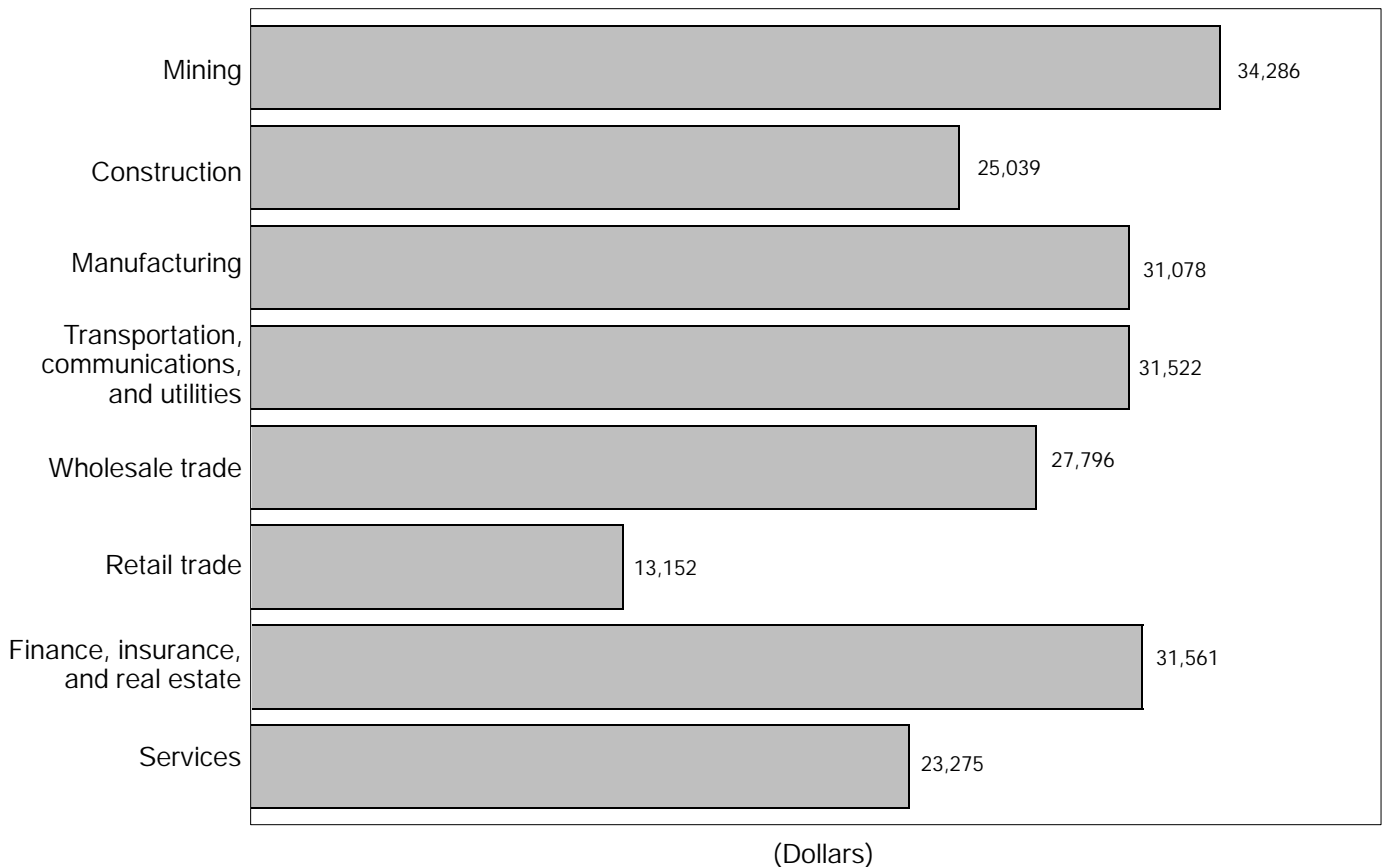

State	Number of companies	Total employment
California	568,686	9,601,546
New York	371,479	5,855,888
Texas	295,485	5,403,556
Florida	284,249	4,255,410
Illinois	212,755	4,150,961
Pennsylvania	206,700	3,987,908
Ohio	181,045	3,801,167
New Jersey	169,962	2,734,893
Michigan	160,736	3,024,274
North Carolina	122,003	2,423,256

Figure 1. **Companies and Sales and Receipts by Employment Size: 1992**

<sup>1</sup>Companies shown reported annual payroll, but did not report any employees on their payroll during the pay period including March 12, 1992 (see Employment in Appendix B, Explanation of Terms).

<sup>1</sup>Companies with no paid employees are companies which filed a tax return for 1992 indicating business activity, but did not file or report employment or payroll for 1992 on Treasury Form 941. Also, the owners of a company are usually not considered employees for the purposes of Treasury Form 941. See Appendix A, Technical Notes.

<sup>2</sup>All tax-exempt nonemployers are excluded.

<sup>3</sup>Data for companies covered by the enterprise program excludes 4512 (part), Domestically-owned scheduled air transportation.

<sup>4</sup>Data for companies covered by the enterprise program excludes 8211, Elementary and Secondary Schools; 8221, Colleges, Universities, and Professional Schools; and 8231, Libraries.

Note: Employment size class is represented by one of the following symbols: A—Less than 20 employees; B—20 to 99 employees; C—100 to 249 employees; E—250 to 499 employees; F—500 to 999 employees; G—1,000 to 2,499 employees; H—2,500 to 4,999 employees; I—5,000 to 9,999 employees; J—10,000 to 24,999 employees; K—25,000 to 49,999 employees; L—50,000 to 99,999 employees; M—100,000 employees or more.

# Appendix A.

## Technical Notes

---

### COVERAGE, STRUCTURE, AND METHODOLOGY

#### Multiestablishment Companies

Since 1971, the Bureau of the Census has conducted an annual report of organization survey of multiestablishment companies. For the 1992 Economic Census, every multi-establishment company with more than 50 employees or 10 or more establishments was required to complete census form NC-9901, Report of Organization, to determine its organizational and industrial structure. (For this data set, this was completed as of the end of 1992). Specifically, each company was asked to update and correct a list of individual establishments owned or controlled by either the parent company or its subsidiaries. From the response, the Bureau of the Census was able to select and preaddress the appropriate 1992 census report for each establishment of each company. A company received a separate establishment report form for each physical location at which industrial and business activities within the scope of the 1992 Economic Census were conducted. As described by the *Standard Industrial Classification Manual: 1987*<sup>1</sup> (SIC), companies engaged in distinctly different lines of activity at one location were required to submit a separate establishment report for each activity, if separate records were maintained and if the various activities were economically significant. Also, when more than one business (legal entity) was operated at a single location, each was regarded as a separate establishment for the censuses.

In addition to preparing a separate census report for each establishment producing or distributing goods or providing services to the general public or other business firms, each company covered in the economic censuses was asked to identify and report separately all auxiliaries. The primary functions of these establishments are to manage, administer, service, or support the activities of the operating establishments of the company.

During the actual censuses, information on company-establishment relationships and parent-subsidiary affiliations was confirmed or revised by including inquiries

requesting information from firms either owning or controlling other companies or owned or controlled by another company in order to identify all subsidiary or parent firms.

#### Single-Establishment Companies

Single-establishment companies are classified as either employer firms or nonemployer firms.

**Employer firms.** The Bureau of the Census created a mailing list of all employer firms engaged in industrial activities operating within the scope of the economic censuses by using a name and address computer file of all active businesses listed in the records of the Internal Revenue Service (IRS) as having one or more paid employees, and a comparable name and address file of employers from the records of the Social Security Administration (SSA) containing the industry codes assigned to each business.

In an effort to reduce both the costs of the censuses and the reporting burden on small businesses, single-establishment employers with payrolls below specified values, which varied by industry, were excused from filing 1992 census reports. (The quarterly payroll data reported on IRS form 941 was used to determine whether a firm was to receive a report form.) Instead, data on employment, payrolls, and sales were obtained from Federal payroll and income tax returns filed with the IRS. For mining, construction, and manufacturing, other data items normally collected on the individual establishment reports were estimated either from industry averages or from sample data collected from other small companies. Based on the IRS data and any estimated items, a substitute census establishment report was generated for each "nonmail" single-establishment employer company. This procedure relieved the censuses reporting burden for many small business employers.

**Nonemployer firms.** The mailing list of employer firms does not include all firms; excluded are firms with no paid employees<sup>2</sup>. Since these small businesses (usually operated by sole proprietors or working partners and their

<sup>2</sup>The "Company Summary" report includes an "All Companies" tabulation. This table includes most nonemployers and some industries not covered in other tables of the report. See footnotes at the end of table 1.

unpaid family members) are not subject to payroll taxes, they were not included in either the IRS file of business firms or the SSA file of industry classifications used to prepare the single-establishment mailing list.

Business receipts, industrial classifications, and geographic locations of these firms are based on information from Federal income tax returns obtained from IRS. Only the returns reporting annual receipts of \$500 or more were tabulated. The construction industries did not employ any such cutoffs.

## Company Data

In presenting data on company-establishment relationships in this report, two distinct types of statistics are shown: company data and establishment data. Company data refer to consolidated company-wide statistics which may represent either the sum of the data reported for individual establishments or values reported for the entire company as a whole, as explained below. Establishment data in this report refer to statistical aggregates compiled from the individual establishment reports collected in the economic censuses.

Each multiestablishment company that had 500 employees or more was mailed form ES-9100, Enterprise Summary Report, to obtain unduplicated, consolidated company totals of selected statistics. As in the 1987 Enterprise Statistics program, there was complete coverage for those multiestablishment companies with 500 employees or more.

The company totals collected on form ES-9100 represent consolidated domestic totals for the parent company and all of its subsidiaries as of the end of 1992. The data reported on merged or acquired companies varied because of differing accounting practices. When an acquisition or merger was treated by the company as a "pooling of interest," the data reflected the combined full-year activities of both acquiring and acquired companies regardless of the date of acquisition. In these cases, the company data corresponded with the establishment data, since the establishment reports represented full-year activities, all of which were tabulated as part of the new parent company. However, when an acquisition or merger was treated by the acquiring company as a purchase, the company data normally reflected the operations of the acquired company only after the acquisition took place. Since the acquired company's establishment reports, representing a full year's activities, were credited to the acquiring company in the tabulations, the summary data supplied by the acquiring company on form ES-9100 had to be restated to provide comparable company and establishment totals. The restatement was based on information obtained either from the new parent company or from the ES-9100 filed by the acquired company. The company data in this report are primarily of the "pooling of interest" sort; the exact extent of the "purchase" accounting method is not known.

## ASSIGNING INDUSTRY CODES

### Establishments

Each establishment covered in the 1992 Economic Census was assigned an industry or kind-of-business code according to the 1992 SIC manual issued by the Office of Management and Budget, Executive Office of the President. Codes were chosen on the basis of the principal products made, lines of merchandise sold, type of construction activity performed, or services rendered by the establishment, as measured by the reported dollar volume of shipments, sales, or receipts during the census year. In some instances, the code was based on the principal materials or processes used. (For a comprehensive description of the Bureau's establishment classification procedures, see the introductory texts and appendixes of the various publications of the 1992 Economic Census.)

### Companies

Each company covered in the 1992 Economic Census was classified in one enterprise industry category (see appendix C). The two-digit SIC codes of companies shown in this publication are an aggregation of the detailed enterprise industry category codes.

**Single-industry companies.** For single-establishment and multiestablishment single-industry companies, the industry category classification was simply the enterprise category that was the equivalent of the single census industry (four-digit SIC code) in which the company's one or more establishments were primarily engaged.

**Multi-industry companies.** For the remaining multies-establishment, multi-industry companies, the enterprise industry classification was determined by first ascertaining the largest census industry division (manufacturing, wholesale trade, etc.) of each company; then, the primary enterprise industry category was selected from within that division. The determination of the largest census industry division and the primary enterprise industry category was made from establishment annual payroll data.

Establishment payroll data were chosen to be the determining factor for enterprise industry classification of multiestablishment, multi-industry companies because they were found to be the most meaningful economic measure common to all economic censuses divisions. There are only three data items common to all economic censuses establishment reports. They are: employment, annual payroll, and receipts or sales (dollar volume of business).

The employment data cover different time periods for different industries and are affected by seasonality. Sales and receipts may not accurately reflect the relative

economic impact of companies in different industries. For example, sales and receipts of a wholesale broker represent gross sales made rather than commissions received and might be greater than that of a hotel—yet a hotel's sales and receipts would have more of an impact. Annual payroll, therefore, has been determined to be the best economic measure, i.e., the item represents a full calendar year and is a good indicator of relative economic impact.

**Integrated petroleum extraction and refining companies.** Because of the widespread practice of the larger petroleum extraction and refining companies in vertically integrating their activities, Industry Category 291, Petroleum Refining (including integrated), was defined to include census (SIC) industries which cut across industry division lines. A company was classified in category 291 if it: (1) operated establishments both in SIC industry 1311, Crude Petroleum and Natural Gas, and in Industry 2911, Petroleum Refining; and (2) was primarily engaged in both industries, as reflected by its payroll. A company engaged in both industries 1311 and 2911, but primarily engaged in another industry category, was classified in that other category.

Nonintegrated petroleum companies primarily engaged in extracting or refining activities (industry 1311 or industry 2911, but not both) were classified in either the mining category 131 or the manufacturing category 291, using the standard classification procedure for coding multi-industry companies.

## CLASSIFICATION

The 1992 classifications have expanded coverage (scope) and reflect new industries (see “Comparability of the Data” below). The Enterprise Industry Categories (EIC) were derived by adapting the four-digit SIC system to relate more meaningfully to consolidated company structure. Appendix C compares 1992 Enterprise Industry Categories with 1992 Standard Industrial Classifications. The SIC system was most recently revised in 1987; the 1992 data utilize the 1987 classifications.

Historical comparability of data in each enterprise industry category is also affected by the large diversified companies which significantly changed their industrial activities “mix” between census years through internal company growth or merger, acquisition, or disposal of subsidiaries with resulting shifts in their industry category classifications. Such classification “transfers” of company aggregates (e.g., tabulated in one industry in 1987, but in another industry in 1992) may constitute a significant part of the observed net historical changes in the company totals of some industry categories shown in this report.

## OUT-OF-SCOPE ACTIVITIES

To present meaningful company data encompassing all economic activities, data on out-of-scope activities have

been included in this publication if a majority of the owning company's payroll was classified as primarily within the scope of the 1992 census. On the other hand, if the firm was primarily engaged in activities outside the scope of the 1992 census, based on payroll, the data for its predominantly out-of-scope activities were excluded while the data for its in-census-scope establishments were included. For example, in handling companies primarily engaged in agricultural service activities, data on their primary activities were excluded, while data on their retail stores were included.

A large number of industries that were out-of-scope for 1987 were in-scope for 1992. Companies primarily out-of-scope are classified based on their in-scope activities only. As a result of the expansion in industry coverage for 1992, some companies may have been classified in a different category for 1987.

## COMPARABILITY OF THE DATA<sup>1 2</sup>

### Comparability to Previously Released Enterprise Statistics

The 1992 and 1987 censuses were conducted under similar conditions and procedures. However, strict comparability of the data for the two censuses is limited due to industry coverage.

In 1992 the enterprise program was expanded to include the Transportation, Communications, and Utilities and Financial, Insurance, and Real Estate Industries. Changes to industry coverage by year are listed below.

#### ● Additions in 1982

- Agricultural production
- Health services, except hospitals

#### ● Dropped in 1987

- Agricultural production

#### ● Additions in 1987

- Trucking and courier services
- Water transportation
- Transportation services
- Hospitals

<sup>1</sup>See footnote 1 on page A-1.

<sup>2</sup>See footnote 2 on page A-1.

- **Additions in 1992**

- **Transportation, Communications, and Utilities**  
(expanded from Selected Transportation)

- 41 Local and interurban passenger transit
- 45 Transportation by air, except scheduled
- 48 Communications
- 48.1 Telephone and telegraph communications
- 48.3 Radio and television broadcasting stations
- 48.9 Cable and other communication services
- 49 Electric, gas, and sanitary services
- 49.1 Electric services
- 49.2 Gas production and distribution
- 49.3 Combination utility services
- 49.9 Water, steam, and sanitary services

- **Financial, Insurance, and Real Estate Industries**  
(all new)

- 60 Depository institutions
- 60.1 Central reserve depository institutions
- 60.2 Commercial banks
- 60.3 Savings institutions
- 60.6 Credit unions
- 60.9 Depository-related services
- 61 Nondepository credit institutions
- 61.1 Federal credit agencies
- 61.9 Other credit institutions
- 62 Security and commodity brokers
- 63 Insurance carriers
- 63.1 Life insurance

- 63.2 Medical service plans and health insurance
- 63.9 Other insurance
- 64 Insurance agents, brokers and service
- 65 Real estate
- 65.1 Real estate operators and lessors
- 65.3 Real estate agents and managers
- 65.9 Other real estate
- 67 Holding and other investment offices

### **Comparability to Other Economic Census Publications**

It is important to note that establishment figures in this publication are based on the company classification of their owning firms, and are not directly comparable with any of the regular economic censuses totals, which were tabulated only on an establishment classification basis.

**Data totals.** It was necessary to bring together, from each of the 1992 Economic Censuses, the computer records for all establishments under common ownership or control. Both single-establishment and assembled multiestablishment companies underwent various data edits and consistency checks. Specifically for multiestablishment companies, various editing checks were routinely made to verify the internal consistency of each company's establishment records when aggregated to company data totals. Checks of the establishment data were also made against the totals available from the ES-9100. Significant errors in the establishment or company data records revealed by these edits also were corrected. The company edit operation came after the census industry totals had been published. Conversely, many of the corrections made during the review of the final censuses publication tables were made too late to be reflected in establishment computer records used as the basic source for this report.

---

## Appendix B.

# Explanation of Terms

---

### ANNUAL PAYROLL

Payroll includes all forms of compensation such as salaries, wages, commissions, bonuses, vacation allowances, sick-leave pay, and the value of payments in kind (e.g., free meals and lodgings) paid during the year to all employees. Tips and gratuities received by employees from patrons and reported to employers are included. For corporations, it includes amounts paid to officers and executives; for unincorporated businesses, it does not include profit or other compensation of proprietors or partners. Payroll is reported before deductions for social security, income tax, insurance, union dues, etc. This definition of payroll is the same as that used by the IRS on form 941.

### AUXILIARIES

Auxiliaries are defined as establishments whose employees are primarily engaged in general and business administration; management; research, development, and testing; warehousing; electronic data processing; and other supporting services performed centrally for other establishments of the same company rather than for other companies or the general public.

Each auxiliary reported in the economic censuses was assigned a code based on the standard industrial classification (SIC) of the establishments within the company for which the auxiliary performed its supporting services. These "industry-serviced" codes reflect SIC major group (two-digit) or industry group (three-digit) rather than individual industry (four-digit) classifications, because the auxiliaries of the larger and more industrially diversified companies (which accounted for the bulk of auxiliary activities) typically served establishments classified in more than one industry group or industry.

### COMPANY

A company is a business consisting of one domestic establishment or more that the reporting firm specified under its ownership or control at the end of 1992. If a company owned or controlled other companies, all establishments of the subsidiaries are included as part of the owning or controlling company. In this report, the terms company, firm, and enterprise are used interchangeably.

### EMPLOYMENT

Employment in the economic census is defined as all employees, full-time and part-time, as reported on establishment payrolls during specified pay periods during 1992. Persons on paid sick leave, paid holidays, and paid vacations are included as employees, as are salaried officers and executives of corporations. However, proprietors and partners of unincorporated businesses are not considered employees.

The derivation of the 1992 employment figures varied somewhat among the different economic censuses. For establishments in mining, manufacturing, and construction, employment represents an annual average of the number of "production workers" on the payroll for any part of the pay periods including the 12th of March, May, August, and November, plus the number of "all other employees" on the payroll during the March 12th pay period.

All employment data except that for out-of-scope activities, are based on either data reported on individual establishment report forms or data from IRS form 941 for small employer firms not required to complete a census report. For out-of-scope activities, employment data are developed from the number of employees as of the March 12th pay period reported on the form NC-9901, Report of Organization.

### ENTERPRISE

For this report, an enterprise is the same as a "company." See "company" for a detailed definition.

### ENTERPRISE INDUSTRY CATEGORY

An enterprise industry category (EIC) is a group of four-digit SIC industries that were specifically designed to relate to enterprises rather than to establishments. It is an adaptation of the four-digit SIC classification system to provide an industrial classification system that is meaningful in expressing consolidated company aggregates of the establishment data collected in the economic censuses.

Enterprise industry categories are grouped to form industry divisions representing major sectors of the economy: construction, manufacturing, retail trade, etc.

## ESTABLISHMENTS

An establishment in the economic census is defined as a business or industrial unit at a single physical location which produces or distributes goods or performs services. One significant deviation in this establishment concept occurs in the construction industry. Relatively permanent offices that have the responsibility for performing management and other administrative functions for one or more construction projects or sites are classified as operating construction establishments. However, an establishment primarily engaged in general administrative, management, or support functions performed centrally for one or more construction establishments is considered an auxiliary.

## FIRM

For this report, “firm” is the same as “company.” See “company” for a detailed description.

## LARGE COMPANY

A large company is defined as having 500 employees or more. The qualifier of 500 employees is more for practical considerations inherent in the records used to prepare this report, rather than for economic or statistical considerations. The qualifier was chosen because enough large companies exist in most categories to permit publishing considerable data without disclosing the activities of individual companies.

## LEGAL FORM OF ORGANIZATION

Legal form of organization is the method used to distinguish each company as an individual proprietorship, partnership, corporation, or other business entity. Each company covered in the 1992 and previous economic censuses was classified into specific legal forms of organization.

**Individual proprietorships.** Unincorporated companies owned by one person.

**Partnerships.** Unincorporated companies owned by two or more persons having financial interest in the business (joint ventures, except corporations, are included as partnerships).

**Corporations.** Companies legally incorporated under State laws including nontax-exempt cooperatives.

**Other legal forms.** Included in this group are cooperatives, estates, receiverships, government-owned liquor stores, etc.

## MANUFACTURERS' SALES BRANCHES AND SALES OFFICES

Manufacturers' sales branches and sales offices are wholesale trade establishments that primarily distribute products manufactured by the owning company. In the SIC manual, manufacturers' sales branches and sales offices are classified as wholesale trade operating establishments and are treated that way in the publications of the census of wholesale trade.

## SALES AND RECEIPTS

Sales and receipts are defined as the receipts for goods produced or distributed or services provided. Excluded from sales are nonoperating receipts, returns on investments, and interest. Two types of sales and receipts figures were collected in the 1992 Economic Census and earlier economic censuses. The first type consists of gross sales and receipts reported by establishments, and included estimated values assigned to intra-company transfers of goods and services among establishments within the same company. The second type consists of net sales and receipts reported by companies (or estimates derived from census establishment data), excluding the values of intra-company transfers among their own establishments.

- a. **Establishment sales and receipts.** Establishment sales and receipts are represented by various measures to show the concept of gross dollar volume of activity by establishments covered in the economic censuses. Wholesale trade (including manufacturers' sales branches and sales offices) and retail trade collected data on the “dollar volume of business” for the cash or credit sales of merchandise. Construction industries collected data on “business receipts” to directly reflect the dollar amount of goods sold and work done. Service industries gathered data on “operating receipts” which showed the total of all receipts from customers, patrons, or clients for services rendered and merchandise sold during the year, whether or not payment was received that year. From manufacturing and mining, similar data were collected on “value of shipments” which reflect the net selling values of products. Auxiliaries were asked to report sales to customers outside the company, but to exclude transactions with other establishments of the owning company or sales to customers or receipts for services already reported by other establishments of the owing company. All such data are included under the general term “sales and receipts” in this report.

Because of duplication, the aggregates of these establishments' sales and receipts ordinarily exceed a firm's total net sales and receipts, which reflect only commercial transactions with outside customers. For more detailed descriptions of the specific sales and receipts measures used by the divisions covered, see the publications of the 1992 Economic Census.

b. **Company sales and receipts.** Some establishments of a multiestablishment company transfer part or all of their products to other establishments of the company for further processing or distribution, rather than shipping them directly to outside customers. Since these intra-company shipments are assigned approximate commercial values (for the basic economic census purpose of measuring gross output by the industry classification of establishments), the gross cumulation of establishment figures usually overstates the actual net sales and receipts of a company, especially those of the larger multiestablishment companies.

Unduplicated net sales and receipts figures for large companies are obtained from form ES-9100. The net figures for small multiestablishment companies are derived by aggregating and comparing the equivalent figures for:

- (1) the operating establishments of the company (i.e., the value of shipments reported by mining and manufacturing plants and sales and receipts reported by construction; wholesale; retail; service; transportation, communications, and utilities; finance, insurance, and real estate establishments), and
- (2) the manufacturers' sales branches and the auxiliaries. The larger of the two totals is

considered the correct one. Many manufacturing companies, who also operated their own sales branches or sales offices, excluded the "markup" between the plant and the sales branch or sales office from their value of shipments. For this reason, the sales and receipts reported by the sales branches are the tabulated sales and receipts figures for the company.

For single-establishment companies, sales and receipts data are obtained from establishment report forms or administrative records.

## **TYPE OF ORGANIZATION**

Type of organization refers to the number of establishments operated by a company. A single-establishment company is one with only one establishment engaged in economic activities; a multiestablishment company is one with two or more establishments engaged in such activities. If a company is engaged in two or more distinctly different lines of economic activity (wholesale or retail trade; manufacturing; construction; service; mining; transportation, communications, and utilities; finance, insurance and real estate, etc.) at the same physical location, and separate records can be prepared for each activity, each activity would be classified as a separate establishment.

---

# Appendix D.

## **Sample Report Forms**

---

The sample report forms are shown on the following pages.
