

# Were you born or pregnant between 1938 and 1971?

If so, you may have been exposed to the drug diethylstilbestrol (DES). To assess your personal likelihood of DES exposure or to learn how potential DES exposure could affect you, your family, or your friends, visit the Centers for Disease Control and Prevention's DES Update Web site at [www.cdc.gov/DES](http://www.cdc.gov/DES) or call toll-free at 1-888-232-6789.

**Current research links DES exposure with certain increased health risks, including:**

**For Women:**

- Breast Cancer
- Rare cancers of the vagina and cervix
- Pregnancy complications and pre-term delivery
- Infertility

**For Men:**

- Non-cancerous testicular cysts
