

DEPARTMENT OF COMMERCE**International Trade Administration**

[A-201-830]

Preliminary Results of Antidumping Duty Administrative Review of the Antidumping Duty: Carbon and Alloy Steel Wire Rod from Mexico

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

ACTION: Notice of Preliminary Results of Antidumping Duty Administrative Review.

SUMMARY: In response to requests by interested parties, the Department of Commerce ("the Department") is conducting an administrative review of the antidumping duty order on carbon and alloy steel wire rod ("wire rod") from Mexico for the period of review ("POR") April 10, 2002, through September 30, 2003.

We preliminarily determine that during the POR, Hylsa Puebla, S.A. de C.V. ("Hylsa Puebla") and Siderurgica Lazaro Cardenas Las Truchas S.A. de C.V., and its affiliate, CCC Steel GmbH ("CCC Steel"), collectively ("SICARTSA") sold subject merchandise at less than normal value ("NV"). If these preliminary results are adopted in the final results of this administrative review, we will instruct U.S. Customs and Border Protection ("CBP") to assess antidumping duties equal to the difference between the export price ("EP") and NV. Interested parties are invited to comment on these preliminary results. Parties who submit comments in this segment of the proceeding should also submit with them: (1) a statement of the issues and (2) a brief summary of the comments. Further, parties submitting written comments are requested to provide the Department with an electronic version of the public version of any such comments on diskette. The due date of the case briefs and the date of the hearing (if required) will be announced at a later date.

EFFECTIVE DATE: November 8, 2004.

FOR FURTHER INFORMATION CONTACT: Mark Young or Tipten Troidl at (202) 482-6397 or (202) 482-1767, respectively; AD/CVD Operations, Office 3, Import Administration, Room 1870, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue, NW, Washington, DC 20230.

SUPPLEMENTARY INFORMATION:**Background**

On October 29, 2002, the Department published in the *Federal Register* the antidumping duty order on wire rod from Mexico; see *Notice of Antidumping Duty Orders: Carbon and Certain Alloy Steel Wire Rod from Brazil, Indonesia, Mexico, Moldova, Trinidad and Tobago, and Ukraine*, 67 FR 65945. On October 1, 2003, we published in the *Federal Register* the notice of *Antidumping or Countervailing Duty Order, Finding, or Suspended Investigation: Opportunity To Request Administrative Review*, 68 FR 56618.

By October 31, 2003, we had received requests for review from petitioners,¹ SICARTSA, and Hylsa Puebla and its parent company Hylsamex, S.A. de C.V. ("Hylsamex"),² in accordance with 19 CFR 351.213(b)(2).

On November 28, 2003, we published the notice of initiation of this antidumping duty administrative review covering the period April 10, 2002, through September 30, 2003. See *Initiation of Antidumping and Countervailing Duty Administrative Reviews*, 68 FR 66799 (November 28, 2003) ("*Initiation Notice*").

During the most recently completed segment of the proceeding in which SICARTSA participated, the Department found and disregarded sales that failed the cost test.³ Pursuant to section 773(b)(2)(A)(ii) of the Tariff Act of 1930, as amended ("the Act"), we had reasonable grounds to believe or suspect that sales by SICARTSA of the foreign like product under consideration for the determination of NV in this review were made at prices below the cost of production ("COP"). Therefore, we initiated a cost investigation of SICARTSA, and instructed the company to fill out sections A-D⁴ of our initial

¹ The petitioners are Gerdau Ameristeel U.S., Inc., Georgetown Steel Co., Keystone Consolidated Industries, Inc., and North Star Steel Texas, Inc.

² Hylsa Puebla is a wholly-owned subsidiary of Hylsa, S.A. de C.V., which in turn is wholly-owned by Hylsamex, a Mexican holding company. On January 7, 2004, Hylsamex stated that it did not produce subject merchandise and it did not have any sales of subject merchandise to customers in the United States or Mexico during the review period. As a result Hylsamex withdrew its request for a review during the current review period.

³ The most recently completed segment in which SICARTSA participated was the investigation. See *Notice of Final Determination of Sales at Less Than Fair Value: Carbon and Certain Alloy Steel Wire Rod From Mexico* 67 FR 55800 (August 30, 2002) ("*Wire Rod from Mexico*").

⁴ Section A: Organization, Accounting Practices, Markets and Merchandise

Section B: Comparison Market Sales

Section C: Sales to the United States

Section D: Cost of Production and Constructed Value

questionnaire which was issued on December 9, 2003. SICARTSA submitted its response, in toto, by January 30, 2004.

On February 18, 2004, petitioners submitted a sales-below-cost allegation against Hylsa Puebla. We determined that petitioners' cost allegations provided a reasonable basis to initiate a COP investigation of Hylsa Puebla's sales. See the company-specific COP initiation memorandum, dated February 25, 2004, in the case file in the Central Records Unit ("CRU"), main Commerce building, room B-099. Also, on February 27, 2004, we informed Hylsa Puebla that it was required to respond to section D of the antidumping questionnaire. See letter from the Department to Hylsa Puebla requiring a section D questionnaire response, dated February 27, 2004, in the CRU. On March 31, 2004, Hylsa Puebla submitted its response to the section D questionnaire.

On June 14, 2004, the Department published an extension of preliminary results for this review, extending the preliminary results until October 30, 2004.⁵ See *Carbon and Certain Alloy Steel Wire Rod From Mexico and Trinidad and Tobago: Extension of Preliminary Results of 2002/2003 Antidumping Duty Administrative Reviews*, 69 FR 32979 (June 14, 2004).

On September 9, 2004, the Department issued a supplemental section A-C questionnaire to SICARTSA. On September 24, 2004, we issued the company a supplemental section D questionnaire. We received SICARTSA's response to the section A-C supplemental questionnaire on September 15, 2004, and a response to the section D supplemental questionnaire on October 8, 2004. On September 16, 2004, the Department issued a supplemental section A-C questionnaire to Hylsa Puebla. On October 8, 2004, we issued the company a supplemental section D questionnaire. We received the response to Hylsa Puebla's section A-C supplemental questionnaire on October 7, 2004, and a response to the section D supplemental questionnaire on October 22, 2004.

Scope of Review

Effective July 24, 2003, in accordance with the Department's *Notice of Final Result of Changed Circumstances Review of the Antidumping Duty and Countervailing Duty Orders, and Intent To Revoke Orders in Part*, 68 FR 64079 (November 12, 2003), the scope of this order was amended. Therefore, for

⁵ Since the due date falls on a Saturday, the actual signature date is November 1, 2004.

purposes of this review, there were separate scopes in effect. These scopes are set forth below.

Scope of Order from October 29, 2002, through July 23, 2003

The merchandise subject to this order is certain hot-rolled products of carbon steel and alloy steel, in coils, of approximately round cross section, 5.00 mm or more, but less than 19.00 mm, in solid cross-sectional diameter.

Specifically excluded are steel products possessing the above-noted physical characteristics and meeting the *Harmonized Tariff Schedule of the United States* (HTSUS) definitions for (a) stainless steel; (b) tool steel; (c) high nickel steel; (d) ball bearing steel; and (e) concrete reinforcing bars and rods. Also excluded are (f) free machining steel products (*i.e.*, products that contain by weight one or more of the following elements: 0.03 percent or more of lead, 0.05 percent or more of bismuth, 0.08 percent or more of sulfur, more than 0.04 percent of phosphorus, more than 0.05 percent of selenium, or more than 0.01 percent of tellurium).

Also excluded from the scope are 1080 grade tire cord quality wire rod and 1080 grade tire bead quality wire rod. This grade 1080 tire cord quality rod is defined as: (i) grade 1080 tire cord quality wire rod measuring 5.0 mm or more but not more than 6.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no inclusions greater than 20 microns; (iv) having a carbon segregation per heat average of 3.0 or better using European Method NFA 04-114; (v) having a surface quality with no surface defects of a length greater than 0.15 mm; (vi) capable of being drawn to a diameter of 0.30 mm or less with 3 or fewer breaks per ton, and (vii) containing by weight the following elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.006 percent or less of nitrogen, and (5) not more than 0.15 percent, in the aggregate, of copper, nickel and chromium.

This grade 1080 tire bead quality rod is defined as: (i) grade 1080 tire bead quality wire rod measuring 5.5 mm or more but not more than 7.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no inclusions greater than 20 microns; (iv) having a carbon segregation per heat average of 3.0 or

better using European Method NFA 04-114; (v) having a surface quality with no surface defects of a length greater than 0.2 mm; (vi) capable of being drawn to a diameter of 0.78 mm or larger with 0.5 or fewer breaks per ton; and (vii) containing by weight the following elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of soluble aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.008 percent or less of nitrogen, and (5) either not more than 0.15 percent, in the aggregate, of copper, nickel and chromium (if chromium is not specified), or not more than 0.10 percent in the aggregate of copper and nickel and a chromium content of 0.24 to 0.30 percent (if chromium is specified).

The designation of the products as "tire cord quality" or "tire bead quality" indicates the acceptability of the product for use in the production of tire cord, tire bead, or wire for use in other rubber reinforcement applications such as hose wire. These quality designations are presumed to indicate that these products are being used in tire cord, tire bead, and other rubber reinforcement applications, and such merchandise intended for the tire cord, tire bead, or other rubber reinforcement applications is not included in the scope. However, should petitioners or other interested parties provide a reasonable basis to believe or suspect that there exists a pattern of importation of such products for other than those applications, end-use certification for the importation of such products may be required. Under such circumstances, only the importers of record would normally be required to certify the end use of the imported merchandise.

All products meeting the physical description of subject merchandise that are not specifically excluded are included in this scope.

The products under review are currently classifiable under subheadings 7213.91.3010, 7213.91.3090, 7213.91.4510, 7213.91.4590, 7213.91.6010, 7213.91.6090, 7213.99.0031, 7213.99.0038, 7213.99.0090, 7227.20.0010, 7227.20.0020, 7227.20.0090, 7227.20.0095, 7227.90.6051, 7227.90.6053, 7227.90.6058, and 7227.90.6059 of the HTSUS. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this proceeding is dispositive.

Scope of Order from July 24, 2003, through the POR

The merchandise subject to this order is certain hot-rolled products of carbon

steel and alloy steel, in coils, of approximately round cross section, 5.00 mm or more, but less than 19.00 mm, in solid cross-sectional diameter.

Specifically excluded are steel products possessing the above-noted physical characteristics and meeting the HTSUS definitions for (a) stainless steel; (b) tool steel; (c) high nickel steel; (d) ball bearing steel; and (e) concrete reinforcing bars and rods. Also excluded are (f) free machining steel products (*i.e.*, products that contain by weight one or more of the following elements: 0.03 percent or more of lead, 0.05 percent or more of bismuth, 0.08 percent or more of sulfur, more than 0.04 percent of phosphorus, more than 0.05 percent of selenium, or more than 0.01 percent of tellurium).

Also excluded from the scope are 1080 grade tire cord quality wire rod and 1080 grade tire bead quality wire rod. This grade 1080 tire cord quality rod is defined as: (i) grade 1080 tire cord quality wire rod measuring 5.0 mm or more but not more than 6.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no non-deformable inclusions greater than 20 microns and no deformable inclusions greater than 35 microns; (iv) having a carbon segregation per heat average of 3.0 or better using European Method NFA 04-114; (v) having a surface quality with no surface defects of a length greater than 0.15 mm; (vi) capable of being drawn to a diameter of 0.30 mm or less with 3 or fewer breaks per ton, and (vii) containing by weight the following elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.006 percent or less of nitrogen, and (5) not more than 0.15 percent, in the aggregate, of copper, nickel and chromium.

This grade 1080 tire bead quality rod is defined as: (i) grade 1080 tire bead quality wire rod measuring 5.5 mm or more but not more than 7.0 mm in cross-sectional diameter; (ii) with an average partial decarburization of no more than 70 microns in depth (maximum individual 200 microns); (iii) having no non-deformable inclusions greater than 20 microns and no deformable inclusions greater than 35 microns; (iv) having a carbon segregation per heat average of 3.0 or better using European Method NFA 04-114; (v) having a surface quality with no surface defects of a length greater than 0.2 mm; (vi) capable of being drawn to a diameter of 0.78 mm or larger with 0.5

or fewer breaks per ton; and (vii) containing by weight the following elements in the proportions shown: (1) 0.78 percent or more of carbon, (2) less than 0.01 percent of soluble aluminum, (3) 0.040 percent or less, in the aggregate, of phosphorus and sulfur, (4) 0.008 percent or less of nitrogen, and (5) either not more than 0.15 percent, in the aggregate, of copper, nickel and chromium (if chromium is not specified), or not more than 0.10 percent in the aggregate of copper and nickel and a chromium content of 0.24 to 0.30 percent (if chromium is specified).

For purposes of the grade 1080 tire cord quality wire rod and the grade 1080 tire bead quality wire rod, an inclusion will be considered to be deformable if its ratio of length (measured along the axis - that is, the direction of rolling - of the rod) over thickness (measured on the same inclusion in a direction perpendicular to the axis of the rod) is equal to or greater than three. The size of an inclusion for purposes of the 20 microns and 35 microns limitations is the measurement of the largest dimension observed on a longitudinal section measured in a direction perpendicular to the axis of the rod. This measurement methodology applies only to inclusions on certain grade 1080 tire cord quality wire rod and certain grade 1080 tire bead quality wire rod that are entered, or withdrawn from warehouse, for consumption on or after July 24, 2003.

The designation of the products as "tire cord quality" or "tire bead quality" indicates the acceptability of the product for use in the production of tire cord, tire bead, or wire for use in other rubber reinforcement applications such as hose wire. These quality designations are presumed to indicate that these products are being used in tire cord, tire bead, and other rubber reinforcement applications, and such merchandise intended for the tire cord, tire bead, or other rubber reinforcement applications is not included in the scope. However, should petitioners or other interested parties provide a reasonable basis to believe or suspect that there exists a pattern of importation of such products for other than those applications, end-use certification for the importation of such products may be required. Under such circumstances, only the importers of record would normally be required to certify the end use of the imported merchandise.

All products meeting the physical description of subject merchandise that are not specifically excluded are included in this scope.

The products under review are currently classifiable under subheadings

7213.91.3010, 7213.91.3090, 7213.91.4510, 7213.91.4590, 7213.91.6010, 7213.91.6090, 7213.99.0031, 7213.99.0038, 7213.99.0090, 7227.20.0010, 7227.20.0020, 7227.20.0090, 7227.20.0095, 7227.90.6051, 7227.90.6053, 7227.90.6058, and 7227.90.6059 of the HTSUS. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the scope of this proceeding is dispositive.⁶

Verification

The Department intends to verify the questionnaire response submitted by Hysla Puebla, as this company was not included in the less than fair value ("LTFV") investigation.

Product Comparisons

In accordance with section 771(16) of the Act, all products produced by the respondents covered by the description in the "Scope of Review" section, above, and sold in Mexico during the POR are considered to be foreign like products for purposes of determining appropriate product comparisons to U.S. sales. We have relied on eight criteria to match U.S. sales of subject merchandise to comparison-market sales of the foreign like product or constructed value ("CV"): grade range, carbon content range, surface quality, deoxidation, maximum total residual content, heat treatment, diameter range, and coating. These characteristics have been weighted by the Department where appropriate. Where there were no sales of identical merchandise in the home market made in the ordinary course of trade to compare to U.S. sales, we compared U.S. sales to the next most similar foreign like product on the basis of the characteristics listed above. Where there were no sales of the foreign like product in the home market suitable for matching to the subject merchandise, we used constructed value as the basis for normal value.

Comparisons to Normal Value

To determine whether sales of wire rod from Mexico were made in the United States at less than NV, we compared the EP to the NV, as described in the "Export Price" and "Normal Value" sections of this notice. In accordance with section 777A(d)(2) of the Act, we calculated monthly weighted-average prices for NV and compared these to individual U.S. transactions. See the company-specific

⁶ Effective January 1, 2004, CBP reclassified certain HTSUS numbers related to the subject merchandise. See <http://hotdocs.usitc.gov/tariff-chapters-current/toc.html>.

calculation memoranda, available in the CRU.

Export Price

For the price to the United States, we used, as appropriate, EP in accordance with sections 772(a) and (b) of the Act. We calculated EP when the merchandise was sold by the producer or exporter outside of the United States directly to the first unaffiliated purchaser in the United States prior to importation and when CEP was not otherwise warranted based on the facts on the record. We based EP on the packed cost-insurance-freight ("CIF"), ex-factory, free-on-board ("FOB"), or delivered prices to the first unaffiliated customer in, or for exportation to, the United States. When appropriate, we reduced these prices to reflect discounts and rebates.

In accordance with section 772(c)(2) of the Act, we made deductions, where appropriate, for movement expenses including inland freight from plant or warehouse to port of exportation, foreign brokerage, handling and loading charges, export duties, international freight, marine insurance, U.S. duties, and U.S. inland freight expenses (freight from port to the customer).

Normal Value

A. Selection of Comparison Markets

To determine whether there was a sufficient volume of sales in the home market to serve as a viable basis for calculating NV, we compared each respondent's volume of home market sales of the foreign like product to the volume of its U.S. sales of the subject merchandise. Pursuant to sections 773(a)(1)(B) and 773(a)(1)(C) of the Act, because each respondent had an aggregate volume of home market sales of the foreign like product that was greater than five percent of its aggregate volume of U.S. sales of the subject merchandise, we determined that the home market was viable for all producers.

B. Arm's-Length Test

SICARTSA and Hysla Puebla reported sales of the foreign like product to an affiliated end-user and an affiliated reseller. The Department calculates the NV based on a sale to an affiliated party only if it is satisfied that the price to the affiliated party is comparable to the price at which sales are made to parties not affiliated with the producer or exporter, *i.e.*, sales at arm's-length. See 19 CFR 351.403(c). To test whether these sales were made at arm's-length, we compared the starting prices of sales to affiliated and unaffiliated customers

net of all movement charges, direct selling expenses, discounts and packing. In accordance with the Department's current practice, if the prices charged to an affiliated party were, on average, between 98 and 102 percent of the prices charged to unaffiliated parties for merchandise identical or most similar to that sold to the affiliated party, we consider the sales to be at arm's-length prices. See 19 CFR 351.403(c).

Conversely, where sales to the affiliated party did not pass the arm's-length test, all sales to that affiliated party have been excluded from the NV calculation. See *Antidumping Proceedings: Affiliated Party Sales in the Ordinary Course of Trade*, 67 FR 69186 (November 15, 2002). Both Hysla and SICARTSA had sales that did not pass the arm's-length test and were excluded from the NV calculation.

C. Cost of Production Analysis

1. Calculation of COP

Before making any comparisons to NV, we conducted a COP analysis of SICARTSA and Hysla Puebla, pursuant to section 773(b) of the Act, to determine whether the respondents' comparison market sales were made below the COP. We calculated the COP based on the sum of the cost of materials and fabrication for the foreign like product, plus amounts for selling, general, and administrative expenses ("SG&A") and packing, in accordance with section 773(b)(3) of the Act. We relied on the respondents' information as submitted.

2. Test of Comparison Market Prices

1. Calculation of COP

In the investigation we found that for iron ore and lime, major inputs in wire rod production, the affiliates' average COP exceeded the transfer price SICARTSA paid to its affiliated suppliers. In the current review, we also preliminarily find that the affiliates' average COP exceeded the transfer price SICARTSA paid for those inputs. Therefore, pursuant to section 773(f)(3) of the Act, we applied the major input rule and adjusted SICARTSA's reported cost of manufacturing to account for purchases of iron ore and lime from affiliated parties at non-arm's length prices. We were unable to compare the transfer price for iron ore to a market price as there were no unaffiliated purchases or sales. See October 8, 2004 supplemental questionnaire response at Exhibit 8. We therefore, adjusted SICARTSA's reported COM to reflect the higher COP.

Therefore, for SICARTSA and Hysla Puebla, for purposes of this administrative review, we disregarded below-cost sales of a given product and used the remaining sales as the basis for determining NV, in accordance with section 773(b)(1) of the Act. See the company-specific calculation memoranda on file in the CRU for our calculation methodology and results.

Therefore, for SICARTSA and Hysla Puebla, for purposes of this administrative review, we disregarded below-cost sales of a given product and used the remaining sales as the basis for determining NV, in accordance with section 773(b)(1) of the Act. See the company-specific calculation memoranda on file in the CRU for our calculation methodology and results.

D. Calculation of Normal Value Based on Comparison Market Prices

We calculated NV based on ex-works, FOB or delivered prices to comparison market customers. We made deductions from the starting price, when appropriate, for handling, loading, inland freight, warehousing, inland insurance, and discounts. We added interest, freight, and other revenue (*i.e.*, Mexican and U.S. brokerage and handling, and duty charged to customer) where applicable. In accordance with sections 773(a)(6)(A) and (B) of the Act, we added U.S. packing costs and deducted comparison market packing, respectively. In addition, we made

circumstance of sale ("COS") adjustments for direct expenses, including imputed credit expenses, advertising, warranty expenses, commissions, bank charges, and billing adjustments, in accordance with section 773(a)(6)(C)(iii) of the Act.

We also made adjustments, in accordance with 19 CFR 351.410(e), for indirect selling expenses incurred on comparison market or U.S. sales where commissions were granted on sales in one market but not in the other, the "commission offset." Specifically, where commissions are incurred in one market, but not in the other, we will limit the amount of such allowance to the amount of either the selling expenses incurred in the one market or the commissions allowed in the other market, whichever is less.

When comparing U.S. sales with comparison market sales of similar, but not identical, merchandise, we also made adjustments for physical differences in the merchandise in accordance with section 773(a)(6)(C)(ii) of the Act and section 351.411 of the Department's regulations. We based this adjustment on the difference in the variable cost of manufacturing for the foreign like product and subject merchandise, using POR-average costs.

Sales of wire rod purchased by the respondents from unaffiliated producers and resold in the comparison market were treated in the same manner described above in the "Export Price" section of this notice.

E. Calculation of Normal Value Based on Constructed Value

When we could not determine the NV based on comparison market sales because there were no contemporaneous sales of a comparable product, we compared the EP to CV. In accordance with section 773(e) of the Act, we calculated CV based on the sum of the cost of manufacturing ("COM") of the product sold in the United States, plus amounts for SG&A expenses, profit, and U.S. packing costs. In accordance with section 773(e)(2)(A) of the Act, we based SG&A expenses and profit on the amounts incurred by SICARTSA in connection with the production and sale of the foreign like product in the comparison market.

For price-to-CV comparisons, we made adjustments to CV for COS differences, in accordance with section 773(a)(8) of the Act and 19 CFR 351.410. We made COS adjustments by deducting direct selling expenses incurred on comparison market sales and adding U.S. direct selling expenses.

F. Level of Trade

In accordance with section 773(a)(1)(B) of the Act, we determined NV based on sales in the comparison market at the same level of trade ("LOT") as the EP sales, to the extent practicable. When there were no sales at the same LOT, we compared U.S. sales to comparison market sales at a different LOT. When NV is based on CV, the NV LOT is that of the sales from which we derive SG&A expenses and profit.

Pursuant to section 351.412 of the Department's regulations, to determine whether comparison market sales were at a different LOT, we examined stages in the marketing process and selling functions along the chain of distribution between the producer and the unaffiliated (or arm's-length) customers. If the comparison-market sales were at a different LOT and the differences affect price comparability, as manifested in a pattern of consistent price differences between the sales on which NV is based and comparison-market sales at the LOT of the export transaction, we will make an LOT adjustment under section 773(a)(7)(A) of the Act.

For a detailed description of our LOT methodology and a summary of company-specific LOT findings for these preliminary results, see the calculation memoranda, all on file in the CRU.

Currency Conversion

For purposes of these preliminary results, we made currency conversions in accordance with section 773A(a) of the Act, based on the official exchange rates published by the Federal Reserve Bank.

Preliminary Results of Review

As a result of our review, we preliminarily determine that the following percentage weighted-average margins exist for the period April 10, 2002, through September 30, 2003:

Manufacturer/exporter	Margin (percent)
SICARTSA	1.82
Hylsa Puebla	7.27

The Department will disclose calculations performed within five days of the date of publication of this notice to the parties of this proceeding in accordance with 19 CFR 351.224(b). An interested party may request a hearing within 30 days of publication of these preliminary results. See 19 CFR 351.310(c). The Department will announce the due date of the case briefs at a later date. Rebuttal briefs must be

limited to issues raised in the case briefs. Parties who submit arguments are requested to submit with the argument (1) a statement of the issue, and (2) a brief summary of the argument. Further, parties submitting written comments are requested to provide the Department with an additional copy of the public version of any such comments on diskette. An interested party may request a hearing within 30 days of publication of these preliminary results. See 19 CFR 351.310(c). Any hearing, if requested, ordinarily will be held two days after the due date of the rebuttal briefs. The Department will issue the final results of this administrative review, which will include the results of its analysis of issues raised in any such comments, or at a hearing, if requested, within 120 days of publication of these preliminary results.

Assessment Rate

Pursuant to 19 CFR 351.212(b), the Department calculated an assessment rate for each importer of the subject merchandise. Upon issuance of the final results of this administrative review, if any importer-specific assessment rates calculated in the final results are above *de minimis* (i.e., at or above 0.5 percent), the Department will issue appraisal instructions directly to CBP to assess antidumping duties on appropriate entries by applying the assessment rate to the entered value of the merchandise. For assessment purposes, we calculated importer-specific assessment rates for the subject merchandise by aggregating the dumping margins for all U.S. sales to each importer and dividing the amount by the total entered value of the sales to that importer. Where appropriate, to calculate the entered value, we subtracted international movement expenses (e.g., international freight) from the gross sales value.

Cash Deposit Requirements

To calculate the cash deposit rate for each producer and/or exporter included in this administrative review, we divided the total dumping margins for each company by the total net value for that company's sales during the review period.

The following deposit rates will be effective upon publication of the final results of this administrative review for all shipments of wire rod from Mexico entered, or withdrawn from warehouse, for consumption on or after the publication date, as provided by section 751(a)(2)(C) of the Act: (1) The cash deposit rates for the companies listed above will be the rates established in the final results of this review, except if the rate is less than 0.5 percent and,

therefore, *de minimis*, the cash deposit will be zero; (2) for previously reviewed or investigated companies not listed above, the cash deposit rate will continue to be the company-specific rate published for the most recent final results in which that manufacturer or exporter participated; (3) if the exporter is not a firm covered in this review, a prior review, or the original LTFV investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent final results for the manufacturer of the merchandise; and (4) if neither the exporter nor the manufacturer is a firm covered in this or any previous review conducted by the Department, the cash deposit rate will be 20.11 percent, the "All Others" rate established in the LTFV investigation. See *Wire Rod From Mexico*, 67 FR 55800, at 55801.

These cash deposit requirements, when imposed, shall remain in effect until publication of the final results of the next administrative review.

Notification to Importers

This notice serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

This administrative review is issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: November 1, 2004.

James J. Jochum,

Assistant Secretary for Import Administration.
