

manufacturing concerns on the basis of gross receipts of a business concern over a period of 3 years. The facts that the average yearly funding for a Job Corps Center is \$8.8 million, with funding ranging from \$5 million to \$44 million, and that there are only five businesses in this activity with revenues under the current size standard support establishing a separate size standard of \$30 million.

(b) What Alternatives Did the SBA Reject?

One commenter recommended a size standard between \$12 million and \$15 million size standard. He believed that once a business obtained and operated a Job Corps Center for 3 or more years, it should be well situated to compete with other Job Corps Centers operators. A \$12 million to \$15 million size standard will allow small businesses to develop economies of scale in their operations that improve efficiencies in internal operations as well as decrease the costs associated with managing a contract.

The SBA does not consider this a viable alternative. This recommendation is less than the \$20 million used by the DOL prior to the OHA decision mentioned above. The receipts distribution shows that 87 percent of the Job Corps Center contract dollars go to businesses with over \$30 million in revenues. If a \$15 million size standard were adopted, a business that won a second Job Corps Center contract would probably exceed the size standard within a year of work on that contract.

By establishing the size standard at \$30 million, the SBA will create opportunities for the small businesses in an industry where only five businesses are below the size standard. Of these five businesses, four have revenues below \$1 million, with only one of these businesses having a Job Corps Center contract. If the SBA retains the current \$6 million size standard, it will not accurately reflect the smaller segment of businesses that participate in operating and maintaining Job Corps Centers.
