Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498-1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395-6974. Written comments should be received within 30 days of this notice.

Proposed Project: Health and Safety Outcomes Related to Work Schedules in Nurseries—NEW—The National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC). The mission of the National Institute for Occupational Safety and Health is to promote safety

and health at work for all people through research and prevention.

In the United States, approximately 1.1 million registered nurses work shift schedules to provide essential nursing services that are required around the clock. A recent U.S. government report indicates that the average nurse works more than 40 hours per week. Both shift work and overtime have been independently associated with increased health and safety risks. Little is known about the combined influence of shift work and overtime. In addition, most previous shift work studies of nurses have used young participants. However, the age of the average working U.S. registered nurse is now 43.3 years and has been increasing over the past 20 years. This aging workforce will be more vulnerable to the adverse health and safety risks associated with shift work and overtime. This study will examine the combined influence of shift work and overtime on health and safety in the current registered nurse workforce. The study will provide data for work schedule design recommendations. Potential secondary benefits to society will be improved patient outcomes.

Specific Aim 1. Examine if certain characteristics of shift work schedules, such as shift length (*i.e.* 12-hour, 8-hour shifts), night work, and rotating work schedules are associated with increased health and safety risks.

Specific Aim 2. Examine how shift work and overtime interact to influence health and safety risks.

Specific Aim 3. Examine if disturbances of sleep, family life, and social life mediate effects of work schedules on health and safety.

The study is based on the theoretical model by Barton et al. (1995) who propose that shift work exerts a negative effect on health and safety outcomes by disturbing sleep, family life, and social life. The study will use a cross-sectional design to survey 1,000 registered nurses who will be randomly selected from 10 large hospitals. Participants will be asked to complete a survey, complete a 7-day sleep/activity diary, provide one set of blood pressure readings, and provide a copy of their work schedule from their hospital records for the previous 3-month period.

The survey includes items for personal characteristics such as age and weight; health history; lifestyle factors such as smoking and alcohol use; sleep characteristics and problems; factors at work and other responsibilities such as child care; work schedule factors; musculoskeletal discomfort; gastrointestinal and cardiovascular symptoms; mood; automobile crashes and near misses; needlestick injuries; and job satisfaction. The study will compute a list of work characteristics based on the actual work start and end times. Statistical modeling will be used to examine characteristics of work schedules associated with increased risk while controlling for demographic, health history, lifestyle, and work-related risk factors. A base model will be developed with significant control variables for each outcome. Work schedule variables will then be added to the base model to test for significant relationships while controlling for co-variants. The annualized burden for this data collection is 1,667 hours.

Form name	Number of respondents	Number of responses/respondent	Avg. burden/response (in hours)
3 month overtime diary	1000	6	5/60
7-day sleep/activity diary	1000	7	5/60
Survey	1000	1	35/60
