Title: Section 73.61, AM Directional Antenna Field Strength Measurements.

Form Number: N/A.

Type of Review: Extension of a currently approved collection.

Respondents: Business and other for-profit entities.

Number of Respondents: 1,890.

Estimated Time per Response: 4 hours.

Needs and Uses: 47 CFR 73.61 requires each AM station using directional antennas to make field strength measurement as often as necessary to ensure proper directional antenna system operation. Stations not having approved sampling systems make field strength measurements every three months. Stations with approved sampling systems must take field strength measurements as often as

necessary. Also, all AM station using directional signals must take partial proofs of performance as often as necessary. The FCC staff used the data in field inspections/investigations; AM licensees with directional antennas use the data to ensure that adequate interference protection is maintained between stations and to ensure proper operation of antennas.

Frequency of Response: On occasion reporting requirements.

Total Annual Burden: 1,840 hours.

Needs and Uses: On October 2, 1998, the FCC adopted a Report and Order (R&O) in MM Docket Nos. 98-43 and 94-149. Among other things, the R&O substantially revised the FCC Form 302-FM to facilitate electronic filing by using certifications and an engineering technical box; simplifying questions; and providing instructions for processing standards and rule interpretations. These changes reduced the applicant's filing burdens when preparing and submitting supporting exhibits and streamlined the Commission's application processing. The Commission has also begun to audit pre- and post-application grants at random to preserve the application process' integrity. The FCC uses the data to confirm that each station has been built as specified in the construction permit; to update FCC station files; and for inclusion in future station operating licenses.
