SUPPLEMENTARY INFORMATION: The USIBWC is evaluating long-term river management alternatives for the Rio Grande Canalization Project (RGCP), a narrow river corridor that extends 105.4 river miles along the Rio Grande, from below Percha Dam in Sierra County, New Mexico to American Dam in El Paso, Texas. The RGCP is operated and maintained by the USIBWC and was constructed to facilitate water deliveries to the Rincon and Mesilla Valleys in New Mexico, El Paso Valley in Texas, and Juarez Valley in Mexico. The project also includes a levee system for flood control.

The USIBWC currently implements operation and maintenance procedures to enhance ecosystem functions within the RGCP; however, alterations to the river and floodway from events that pre-date RGCP construction continue to affect the river and floodway. Therefore, USIBWC recognizes the need to accomplish flood control, water delivery, and operations and maintenance activities in a manner that enhances and restores the riparian ecosystem.

River management alternatives were considered and developed over a three-year-long public consultation process that included input from the general public and stakeholders such as regulatory agencies, irrigation districts,

and environmental organizations. The No Action Alternative and three potential action alternatives were selected for further evaluation in the DEIS. Levee rehabilitation, changes associated with grazing leases to improve erosion control, floodway management, and river restoration including aquatic habitat diversification and riparian vegetation development are measures considered in the action alternatives. The USIBWC will select a preferred alternative after public comment on the DEIS.

A copy of the DEIS has been filed with the Environmental Protection Agency (EPA) in accordance with 40 CFR parts 1500-1508 and USIBWC procedures. Written comments concerning the DEIS will be accepted at the address provided above until February 10, 2004.

Dated: December 18, 2003.

DATES: A request for a hearing must be filed on or before January 23, 2004.

FOR FURTHER INFORMATION CONTACT: For further information, please contact Michael A. Lamastra, Fuel Cycle Facilities Branch, Division of Fuel Cycle Safety and Safeguards, Office of Nuclear Material Safety and Safeguards, U.S. Nuclear Regulatory Commission, Mail Stop T-8-A-33, Washington, DC 20555-0001. SUPPLEMENTARY INFORMATION:

I. Introduction

The U.S. Nuclear Regulatory Commission (NRC) has received, by letter dated October 23, 2003, a request from Nuclear Fuel Services, Inc. (NFS), to amend its NRC Special Nuclear Materials License SNM-124, to authorize processing operations in the Oxide Conversion Building (OCB) and the Effluent Processing Building (EPB) at the Blended Low-Enriched Uranium (BLEU) Complex. The request is the third of three license amendment requests planned to support operations associated with downblending and conversion of high-enriched uranium materials to low-enriched uranium oxides.

NFS is currently manufacturing high-enriched nuclear reactor fuel at its facility in Erwin, Tennessee. NFS is constructing a new complex at the Erwin site to manufacture low-enriched nuclear reactor fuel. NFS is requesting this amendment to authorize operations that will convert liquid uranyl nitrate solutions into solid uranium oxide powder as part of the process for downblending and conversion of high-enriched uranium materials into low-enriched uraniumoxide. After the material is converted to uranium oxide powder, it will be transferred to another facility for fabrication of reactor fuel assemblies.
