in conjunction with the World Bank and the governments of the different countries who elect to undertake performance measurement of their public health systems using this methodology. The process will be funded through the Bank and the government of the countries. No Federal funds will be used in the process. It is anticipated that more than nine (9) countries may be involved. The annualized burden is estimated to be 120 hours.

	Number of respondents	Number of responses per respondents	Avg. burden response in hrs.
Year 1	5	1	120

Dated: September 29, 2003.

Nancy E. Cheal,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control Prevention.

Proposed Data Collections Submitted for Public Comment and Recommendations

The Centers for Disease Control and Prevention (CDC) publishes a list of information collection requests under review by the Office of Management and Budget (OMB) in compliance with the Paperwork Reduction Act (44 U.S.C. Chapter 35). To request a copy of these requests, call the CDC Reports Clearance Officer at (404) 498–1210. Send written comments to CDC, Desk Officer, Human Resources and Housing Branch, New Executive Office Building, Room 10235, Washington, DC 20503 or by fax to (202) 395–6974. Written comments should be received within 30 days of this notice.

Proposed Project: Potential Reproductive and Neurological Effects of Exposure to Acrylamide—NEW—The National Institute for Occupational Safety and Health (NIOSH), Centers for Disease Control and Prevention (CDC).

The mission of the National Institute for Occupational Safety and Health (NIOSH) is to promote safety and health at work for all people through research and prevention. Consistent with this mission, NIOSH is undertaking a study of the reproductive and neurobehavioral effects of the occupational exposure to acrylamide. Acrylamide workers and control workers (N = 100 per group) will be recruited from manufacturing, end-user and non-exposed settings. Exposure will be characterized by acrylamide hemoglobin, adduct and urinary metabolite levels, ambient area, personal air, and dermal sampling. Reproductive effects will be evaluated by examining semen quality, sperm DNA integrity, reproductive hormone levels, and prostate specific antigen (PSA) levels.

Neurobehavioral effects will be assessed using sensation-tactile, postual stability, grooved pegboard, and simple reaction time tests. Two questionnaires will be administered on one occasion. Questionnaire information will be collected concurrently to augment test interpretation, adjust for potential confounders and covariates during regression analysis, correlate specific jobs and job activities with exposure measurements, and for validation purposes. Findings from this study will clarify if the adverse reproductive effects observed in animal studies are also present in acrylamide-exposed workers, and if preclinical neurobehavioral deficits are present at acrylamide doses currently considered to be within safe limits. This study is scheduled for implementation in late 2003 and 2004. The annualized estimated burden for this data collection is 87 hours.

Survey questionnaire	Number of respondents	Number of responses/respondent	Average burden/response (in hours)
Medical & Reproductive History Questionnaire	100	1	13/60
Occupational History Questionnaire	100	1	34/60
Non-participant Questionnaire	250	1	2/60

Dated: September 29, 2003.

Nancy E. Cheal,

Acting Associate Director for Policy, Planning and Evaluation, Centers for Disease Control Prevention.
