

2. Interview Day residence (*i.e.*, as of the day of the CCM interview).

3. Census Day address information for people who moved to the sample address since Census Day, and other addresses where a person might have been counted on Census Day.

4. Other information to help us determine where a person should have been counted as of Census Day (relative to our residence rules). For example, enumerators will probe for persons who might have been left off the household roster; ask additional questions about persons who moved from another address on Census Day to the sample address; collect additional information for persons with multiple addresses; and collect information on the addresses of other potential residences for household members.

5. Demographic information for each person in the household on Interview Day or Census Day, including name, date of birth, sex, race, ethnicity, and relationship.

As part of the CCM, we also will conduct a quality control operation—PI Reinterview. For this operation a sample of the CCM PI cases will be selected for a reinterview. This sample consists of approximately 500 housing units in Travis County, Texas; and 50 housing units on the Cheyenne River Reservation in South Dakota. The purpose of the reinterview is to determine if the source of the CCM PI data (*e.g.*, a household member; a specific proxy respondent) can be confirmed. If not, then all cases completed by the original enumerator will be considered invalid, and reassigned for rework by a different enumerator.

The CCM PI and PI Reinterview operations will occur from July 3, 2006 to October 6, 2006. Data collected as a result of these interviews will be processed at our headquarters in Washington, DC.

Definition of Terms

Alternate Addresses—These are respondent provided addresses obtained during the CCM PI for other places where household members may have been counted on Census Day.

Components of Coverage Error—The two components of census coverage error are census omissions (missed persons) and erroneous inclusions. The latter includes duplicates, and persons who should not have been enumerated at a particular address (per our residence rules).

Net Coverage Error—Reflects the difference between omissions and erroneous inclusions. A positive net error indicates an undercount, while a

negative net error indicates an overcount.
