Note.— In the 1922 and earlier annual reports on Mortality Statistics are tables which contain death rates per 100,000 population from important causes in each registration state and city, and from each cause in cities and rural districts. Beginning with 1923 these statistics are in manuscript only.

GENERAL TABLES

Table 1.— Deaths (exclusive of stillbirths) by month: 1934 ---------- 21
Deaths in the United States and in cities and rural districts of each state. (Similar data for cities, which have not been shown since 1922, are retained in manuscript.)

Table 2.— Deaths (exclusive of stillbirths) by color or race: 1934 ---------- 24
Deaths of Whites, Negroes, Indians, Chinese, Japanese, and Other races, in the United States and in cities and rural districts of each state. (Similar data for cities, which have not been shown since 1922, are retained in manuscript.)

Table 3.— Deaths (exclusive of stillbirths) by color and age: 1934 ---------- 26
Deaths of white and colored, under 1 year of age, 1 to 4 years, and by 5-year age periods, in the United States, and in cities and rural districts of each state. (Similar data for cities, which have not been shown since 1922, are retained in manuscript.)

Table 4.— Deaths (exclusive of stillbirths) by age, color or race, and sex: 1934 ---------- 36
Deaths of Whites, Negroes, Indians, Chinese, Japanese, and Other races, by sex, under 1 year of age, 1 to 4 years, and by 5-year age periods, in the United States, the total registration states of 1920, and each state.

Table 5.— Deaths (exclusive of stillbirths) by color from selected causes: 1934 ---------- 50
Deaths from 33 causes, in the United States, for states, by groups of cities and rural districts, and for individual cities with a population of 10,000 or more in 1930.

MORTALITY STATISTICS: 1934

INTRODUCTION

This report for the calendar year 1934 is the thirty-fifth annual report on Mortality Statistics published by the Bureau of the Census. It relates to the United States, the Territory of Hawaii, Puerto Rico, and the Virgin Islands. The data are compiled from transcripts of certificates of death received from the registration authorities of the states and other areas. It makes available detailed figures concerning deaths in individual states and in cities with a population of 10,000 or more, including classifications by sex, color or race, and age, and by cause of death according to the International Classification of Causes of Death. The report was prepared under the direction of Dr. Halbert L. Dunn, Chief Statistician for Vital Statistics, assisted by Dr. John Collinson, Assistant Chief Statistician for Vital Statistics.

EXTENT OF THE REGISTRATION AREA IN 1934

The registration area in 1934 embraced all the states, the District of Columbia, the Territory of Hawaii, Puerto Rico, and the Virgin Islands. These areas were admitted on the basis of approximately complete registration of deaths (at least 90 percent of all deaths) and when the data at hand showed that the deaths were recorded properly under adequate registration laws. Since 1930 the continental area has been complete, with the exception of Texas, which has been represented by eight of the larger cities. In 1933 Texas entered as a full registration State, and the reports will deal henceforth with continental United States and the above outlying areas.

The estimated population of the United States in 1934 was 126,626,000. In this population there were 1,396,903 deaths representing a rate of 11.0 per 1,000 estimated population.

GROWTH OF THE REGISTRATION AREA : 1880 TO 1934

The first mortality statistics published by the Federal Government related to 1850, and were for the entire United States of that time. These statistics were based on data collected at the decennial census of that year; such decennial collections of similar statistics were continued by census enumerators through 1900. In 1880, however, a registration area for deaths was established. For that year, as well as for 1890 and 1900, mortality returns were received from the states and cities included in the area, as well as from returns by enumerators.

The annual collection of mortality statistics for the registration area in the United States began with the calendar year 1900.

Table A shows the states which were included in the area from 1880 to 1934. In each year until 1933 there were also included a number of registration cities in nonregistration states. The Territory of Hawaii was added in 1917, the Virgin Islands in 1924, and Puerto Rico in 1932.

Table B shows the growth of the registration area in population and land area from 1880 to 1934.

[1] Census year ending May 31.
[2] Included in states.
[3] Dropped from area in the census year 1900, readmitted in 1919.
[4] Dropped from the area in 1910, readmitted in 1930.
[5] Included only municipalities with a population of 1,000 or more in 1900; these represented only about 16 percent of the total population.
[6] The remainder of the State of North Carolina was added to the registration area in 1916. (See note 5.)
[7] Dropped from the area in 1925 when the State registration law was declared unconstitutional.
[8] The State was readmitted to the area in 1928 under a new State registration law. (See note 7.)

[1] Census year; enumerated population in the United States, 122,775,046, Apr. 1.
[2] Census year; enumerated population in the United States, 105,710,620, Jan. 1.
[3] The net reduction of 114 square miles, as compared with area stated by census of 1910, was due to irrigation projects.
[4] Census year; enumerated population in the United States, 91,972,266, Apr. 15.
[5] The net reduction of 269 square miles, as compared with area stated by census of 1900, was due to drainage of lakes and swamps in Illinois and Indiana, building of the Roosevelt and Laguna Reservoirs, and the overflow of the Colorado River into the Salton Sea in California.
[6] Census year ending May 31, enumerated population in United States.
[7] The increase of 194 square miles, as compared with area stated by census of 1890, was due to the reclamation of part of Potomac River Flats in the District of Columbia and a part of Lake Tulare in California.

COMPARISON WITH EARLIER REPORTS

In the present volume most of the rate tables generally carried in the introductory text of prior reports have been omitted, and some of the general tables have been revised. Most of the omitted tables are available and are on file in manuscript form in the Bureau of the Census. The data omitted in the revised tables are also available.

The data which were included in table 8 of previous volumes are now shown in a different form in tables 6 and 9. Table 6 shows the number of deaths from each cause of the International List and for certain subdivisions of these causes. The deaths for each cause are shown separately for cities having 10,000 or more population, for cities having 2,500 to 10,000 population, and for rural areas. The abridged age distributions previously included in table 8 are replaced with the age distributions in table 9 in which the deaths are classified in single years up to 5 years, and in 5-year age groups up to 100 years. In order to show the age distribution in detail it has been necessary to include data for only important causes and to indicate these causes by a code in the table stub.

Cities with populations between 2,500 and 10,000 were classified as "rural" prior to 1930, and as "urban" in the years 1930 to 1934. This change was made so that mortality tabulations would be consistent with the United States population census figures. However, in order that comparison may be made with tables issued prior to 1930, the urban classification is now carried in two subdivisions: Cities with populations from 2,500 to 10,000, and cities with populations of 10,000 or more.

In following the requirements established by the International Commission on the International List of Causes of Death at the 1929 Conference in Paris, a dual method of classifying accidental causes of death has been employed. This is necessary in order that the present statistics will be comparable with the classification of earlier years. In tables 6, 7, and 8 a supplemental tabulation shows deaths occurring in connection with accidents in mines and quarries, elevator accidents, etc. These special accidental classes are designated by the punch symbols 201-214. Under the International List numbers 178, 181, 182, 183, 185, 186a, 186b, 193, 194a, and 194b, the deaths associated with special accident classes are shown separately. In comparing the deaths in 1934 for any of the above International List numbers with figures for years prior to 1930, the deaths associated with these special accident classes should not be included.

DEATH RATES OF FOREIGN COUNTRIES

Table C presents death rates for the registration area of the United States and for certain foreign countries.

Table D presents death rates for 5-year periods from 1900 to 1920 and from 1922 to 1934 for the registration area of the United States and for certain countries.

COMPARISON OF INTERNATIONAL AND SPECIAL LISTS OF CAUSES OF DEATH

In classifying causes of death the mortality reports of the Bureau of the Census conform to the list in the fourth revision of the Manual of the International List of Causes of Death, which is based upon the proceedings of the International Commission in Paris in 1929 and was prepared and published by the Bureau of the Census.[1]

The International List of Causes of Death is made up of (1) a detailed list which serves as a basis for specific presentation of deaths from disease or violence, (2) an intermediate list in which many of the titles are consolidations of the headings of the detailed list, and (3) an abridged list in still more consolidated form.

Furthermore, various tables in this report are concerned with different groups of important causes of death selected from the detailed International List. These selected causes are shown in table F. In this table each cause or consolidated group of causes is designated by a two-letter code. Also, after each specified cause, the detailed International List numbers comparable to these selected causes are given. In table E the 5 columns following the International List title give a comparison between the International List numbers and the number or letter codes of each selected list of causes. The selected lists of causes include the intermediate and abridged lists and the causes used in tables 5, 9, and 10 of this volume.

MOTOR - VEHICLE ACCIDENTS

Due to the great public interest in automobile accidents and the rapid increase in deaths due to motor-vehicle accidents, two special accident tables are included in this report. Table G gives the number of deaths due to automobile accidents, automobiles in collision with railroad trains and street cars, and motorcycle accidents. These data are given for the cities and rural areas of each state, and for individual cities with a population of 100,000 or more in 1930. Table H gives the deaths and death rates due to automobile accidents in each state by total number and those which occurred within the state. This table also gives the deaths due to automobile accidents in each large city.

SUPPLEMENT

HAWAII, PUERTO RICO, AND THE VIRGIN ISLANDS

HAWAII

(See tables, pp. 308 to 317)

The number of deaths from all causes in Hawaii in 1934 was 3,455, and the estimated population was 415,000, giving a rate of 8.3 per 1,000 population against 9.0 in 1933.

The highest death rates per 100,000 population in 1934 were from pneumonia (all forms),111.3; diseases of the heart, 97.3; tuberculosis (all forms), 76.1; congenital malformations and diseases of early infancy, 62.4; nephritis, 58.1; cancer, 56.6; cerebral hemorrhage and softening, 34.5; and diarrhea and enteritis (under 2 years) 27.2. These 8 causes account for 62.9 percent of all deaths.

In 1934 there was an encouraging decline in mortality from diarrhea and enteritis (under 2 years), congenital malformations and diseases of early infancy, and diphtheria—all diseases of childhood. The rate for infants under 1 year of age was 70.0 per 1,000 population in 1934 as compared with 70.2 in 1933—more than 50 percent of the deaths being due to premature birth, diarrhea and enteritis, and bronchopneumonia.

Mortality rates showed a marked decrease for diseases of the heart (from 116.3 to 97.3) and tuberculosis (from 93.3 to 76.1) but pneumonia increased (from 94.6 to 111.3).

PUERTO RICO

(See tables, pp. 318 to 325)

The number of deaths from all causes in Puerto Rico in 1934 was 31,684, and the estimated population was 1,645,100, giving a rate of 19.3 per 1,000. The white population was 1,228,800 with a rate of 18.8. The colored population numbered 416,300 with a rate of 20.6.

The highest death rates per 100,000 population in 1934, the third year after admission to the registration area, were for tuberculosis (all forms) (309.0); diarrhea and enteritis—under 2 years (228.5), and 2 years and over (140.7); malaria (148.1); pneumonia (all forms) (145.8); and nephritis (137.8). These 5 causes account for 57.6 percent of all deaths. With the exception of diarrhea and enteritis, the above causes show higher rates for the colored than for the white population.

VIRGIN ISLANDS

(See tables, pp. 326 to 330)

A special census of the population of the Virgin Islands, which was taken by the Bureau of the Census in 1930, numbered 22,012, and Negroes constituted 78.3 percent of the total. Because of the continuous decrease of the population from 1860 to 1930, rates have not been computed.

There were 419 deaths in 1934, 29 of whites, 342 of Negroes, and 48 of mixed. The largest number of deaths resulted from diseases of the heart, nephritis, pneumonia (all forms), cancer, tuberculosis (all forms), diarrhea and enteritis (under 2 years), and cerebral hemorrhage; and these accounted for 59.9 percent of all deaths. The deaths of infants under 1 year of age numbered 64, 64.1 percent of which were due to diarrhea and enteritis, premature birth, and pneumonia (all forms). Deaths of infants under 1 year of age from diarrhea and enteritis decreased from 26 in 1933 to 19 in 1934.
