## Commodity Movements Originating in New Jersey Summary of 1993 CFS

In New Jersey, the CFS measured \$253 billion of goods weighing 180 million tons. New Jersey accounted for approximately 4 percent of the value and 2 percent of the weight of total U.S. shipments. See attached table. The CFS data cover shipments by establishments in mining, manufacturing, wholesale, and selected retail and service industries. The data exclude most shipments of crude oil; therefore, the totals and percentages do not fully reflect the contribution of pipeline shipments.

The major commodities shipped by establishments vary when ranked by value and by weight of the shipments. The major commodities by value were: chemicals or allied products; food or kindred products; electrical machinery, equipment, or supplies; apparel or other textile products; and transportation equipment. The most important commodity by weight was petroleum or coal products. Other important commodities by weight were: nonmetallic minerals; food or kindred products; chemicals or allied products; and clay, concrete, glass, or stone products.

Local transportation of freight is important to New Jersey's commerce. The distribution of commodities by domestic destination and distance of shipments reflects the importance of local transport. The CFS shows that in 1993, about 31 percent of the value and 59 percent of the weight of total shipments from New Jersey were shipped to destinations within the state. About 37 percent of the value and about 60 percent of the weight of all shipments were between places less than 50 miles apart. In comparison, about 30 percent of the value and 56 percent of the weight of total U.S. shipments were between places less than 50 miles apart. In New Jersey, about 50 percent of the value of shipments and 76 percent of the weight of shipments were between places less than 100 miles apart.

More than two-thirds (69 percent) of the value and less than half (41 percent) of the weight of all shipments from New Jersey went to other states. The most important destination by value of shipments was New York. Other important destination states were: Pennsylvania, California, Massachusetts, and Texas. Important destination states by weight of shipments were: New York, Pennsylvania, Massachusetts, Connecticut, and Maryland.

Most commodities (78 percent of the value and about 76 percent of the weight) were moved by trucks. Rail accounted for about 1 percent of the value and 2 percent of the weight of shipments. Pipelines were used to move 6 percent of the weight of shipments. The CFS data confirm the rising importance of parcel, U.S. postal, and courier services that have emerged in recent years. In 1993, this mode of transport was used to ship 944,000 tons of goods worth about \$35 billion or 14 percent of the value of all shipments in New Jersey. In comparison, about 9 percent of the value of total U.S. shipments were moved by this mode.

## 1993 Commodity Flow Survey State Summary: New Jersey

Tabulation by the Bureau of Transportation Statistics, U.S. Department of Transportation

Summary	Value	Weight
Total shipments originating in New Jersey	\$252.8 billion	179.5 million tons
Percent of total U.S. shipments (preliminary U.S. estimate)	4.2	1.8

Commodity Shipments Originating in New Jersey Ranked by Value		Commodity Shipments Originating in New Jersey Ranked by Weight	
Commodity	Percent of value	Commodity	Percent of weight
Chemicals or allied products	14.2	Petroleum or coal products	35.7
Food or kindred products	12.8	Nonmetallic minerals	16.4
Electrical machinery, equipment, or supplies	10.8	Food or kindred products	13.1
Apparel or other finished textile products	8.7	Chemicals or allied products	7.6
Transportation equipment	8.4	Clay, concrete, glass, or stone products	5.3
Other commodities	45.2	Other commodities	21.9
Total	100.0	Total	100.0

Domestic Destinations of Shipments Originating in New Jersey Ranked by Value		Domestic Destinations of Shipments Originating in New Jersey Ranked by Weight	
State	Percent of value	State	Percent of weight
New Jersey	31.3	New Jersey	59.4
New York	13.6	New York	12.5
Pennsylvania	8.6	Pennsylvania	9.7
California	4.3	Massachusetts	3.1
Massachusetts	4.2	Connecticut	2.5
Texas	3.3	Maryland	1.3
Other States	34.7	Other States	11.5
Total	100.0	Total	100.0

Modes of Transportation for Shipments Originating in New Jersey				
Modes	Percent of value	Percent of weight		
Parcel, U.S. Postal Service, or courier service	14.0	0.5		
Truck (for-hire, private, and both private truck and for-hire truck)	78.1	75.7		
Air (including truck and air)	1.6	0.1		
Rail	0.6	1.6		
Water (inland water, Great Lakes, deep sea, truck and water, and rail and water)	0.5	**		
Pipeline*	0.7	5.5		
Truck and rail intermodal combination	**	-		
Other intermodal (truck and pipeline, inland and Gt. Lakes, inland and deep sea)	-	-		
Other, unknown, and withheld for sampling and disclosure reasons	4.5	16.6

X Not applicable.

The Commodity Flow Survey (CFS) is a comprehensive effort to learn where and how goods are shipped in the U.S. The CFS measures shipments of commodities by establishments with paid employees and engaged in manufacturing, mining, wholesale trade, or selected retail and services industries. Prior commodity surveys covered shipments only by manufacturing firms. Commodity flows are estimated for a universe of approximately 900,000 establishments.

Data collected on individual shipments include total value, total weight, commodity type, modes of transport, domestic origin and destination; data for export shipments include the city and country of destination, mode and port of exit. Information is also be obtained on whether shipments are containerized or a hazardous material. Some firms provided data concerning on-site shipping facilities and access to shipping facilities, plus data on ownership and leasing of transportation equipment.

The CFS is conducted by the Bureau of the Census as part of the Economic Census. Funding and technical guidance is provided by the U.S. Department of Transportation. Initiated for 1993, the CFS is scheduled for 1997 and every 5 years thereafter for years ending in 2 and 7. Commodity surveys were conducted between 1963 and 1982, but data for 1982 were not published. No data were collected for 1987. Participants will report for a sample of shipments during a 2-week period each quarter during the reporting year.

The CFS is a mail-out/mail-back survey of 200,000 sampled employer establishments in selected industries. Establishments were selected by stratified sample, with strata based on geographic location and industry. Geographic strata are the 89 National Transportation Analysis Regions(NTARs), which provide nationwide coverage and are aggregations of Bureau of Economic Analysis economic areas. Within the strata, all establishments with annualized employment above a specified cutoff were selected with certainty, and the remaining smaller establishments were sampled with probability proportional to annualized payroll.

For 1993, each sampled establishment reported on a sample of individual shipments during a 2 week period in each calendar quarter. In addition, about 20,000 establishments will provide information on transportation facilities and arrangements in their final reporting period.

For further information about survey design and printed products, contact the Commodity Flow Survey Branch, Services Division, Bureau of the Census, Washington, DC 20233, or by calling 301/457-2805 or 2114. For information on related data programs and studies, contact the Bureau of Transportation Statistics at 202/366-DATA for voice, 202/366-3640 for fax, or CFS@BTS.GOV for e-mail.
