

# \$\$\$\$ Matter!

Your bottom line matters to us, which is why we want to help you improve energy efficiency at your commercial facility.

Lighting, HVAC and refrigeration dominate savings opportunities in the commercial sector, which includes institutional sites such as:

- Government facilities
- Schools
- Hospitals
- Multifamily buildings more than three stories.

Technology advances have produced a number of new energy-efficient devices and appliances such as:

- Efficient power supplies for computers
- Power controls for networked computers

- Commercial clothes washers
- Pre-rinse spray wash valves (used in facilities such as cafeterias and restaurants)

Considering construction of a new facility or major renovations to your existing facility? Talk to us first. We can build energy efficiency into your new or remodeled facility so you can reap the monetary rewards of the technology from the beginning.

Rebates or incentives are available to trim the costs for many of these measures.

Contact us today and we will meet with you and talk about ways you can save energy and dollars at your facility.
