Case 3: Value Village

Save as much as 50 percent of the lighting costs at your facility.

The lighting upgrade above saves Value Village of Boise, Idaho, more than 175,000 kilowatt-hours of electricity per year through the installation of energy-efficient fixtures and fluorescent lamps. In this case, T-12 fixtures were retrofitted with a reflector and T-8 lamps that increased the light output while also reducing power draw by 64 watts per fixture. This retrofit saves Value Village more than \$10,000 annually with close to 30 percent of the savings from avoided maintenance costs. (Information provided by Energy Industries.)

Other possible benefits of lighting equipment upgrades:

- Reduced maintenance costs due to the longer life of the new equipment.
- Increased employee productivity and morale due to improved lighting intensity and improved safety conditions.
- Positive reactions from customers visiting your business.
- Reduced environmental impact from electricity generation.
- Reduced air conditioning load because less heat is produced by lighting systems.
