After

Case 8: Everett Naval Base

Save as much as 50 percent of the lighting costs at your facility.

The lighting upgrade above saves Everett Naval Base in Everett, Wash., almost 500,000 kilowatt-hours per year through the installation of energy-efficient fixtures and fluorescent lamps. In this case, 400-watt metal halide fixtures were replaced with 8-lamp T-8 fixtures for a reduction of 144 watts per fixture. This project not only saved 60 percent of the lighting energy, but also improved visibility, provided a crisper, cleaner atmosphere and reduced "hot spots" of concentrated light in favor of more uniform light distribution. (Information provided by Northwest Edison.)

Other possible benefits of lighting equipment upgrades:

- Reduced maintenance costs due to the longer life of the new equipment.
- Increased employee productivity and morale due to improved lighting intensity and improved safety conditions.
- Positive reactions from customers visiting your business.
- Reduced environmental impact from electricity generation.
- Reduced air conditioning load because less heat is produced by lighting systems.
