SUPPLEMENTARY INFORMATION:

I. Information About the Project/ Document

Effects of global change drivers differ by place and in scale, necessitating place-specific impacts information to enable stakeholders to respond appropriately. Place and scale also determine appropriate adaptation strategies and expected outcomes. This report is a synthesis of three watershed case-study assessments conducted by Global Change Research Program (GCRP) to advance the capability of managers to consider climate and land use change in watershed management decisions. The goal of this report is three-fold: (1) To understand the potential impacts of global changes and the availability of effective responses at the watershed scale across different geographic regions, (2) to learn how GCRP and other research programs might improve the process of conducting future assessments, and (3)

to improve GCRP's and other research programs' understanding about effective ways to inject climate change impacts and adaptation information into decision-making processes. Toward that end, this report compares and contrasts methods and processes employed by the three case study teams to learn effective analytic, project management, and decision support approaches.
