Needs and Uses: The Commission will submit this information collection to OMB as an extension (no change in recordkeeping requirements) during this comment period to obtain the full three-year clearance from them. The Commission has adjusted the number of respondents and total annual burden hours due to an increase in the number of licensees subject to this rule requirement.

Section 90.215 requires station licensees to measure the carrier frequency, output power, and modulation of each transmitter authorized to operate with power in excess of two watts when the transmitter is initially installed and when any changes are made which would likely affect the modulation characteristics. Such measurements, which help ensure proper operation of transmitters, are to be made by a qualified engineering measurement service, and are required to be retained in the station records, along with the name and address of the engineering measurement service, and the person making the measurements.

The information is normally used by the licensee to ensure that equipment is operating within the prescribed tolerances. Prior technical operation of transmitters helps limit interference to other users and provides the licensee

with the maximum possible utilization of equipment.

Federal Communications Commission.

Marlene H. Dortch,

Secretary.
