

respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

*Respondents/Affected Entities:* Private sector and State, Local, or Tribal governments.

*Estimated Number of Respondents:* 195,710.

*Frequency of Response:* On occasion.

*Estimated Total Annual Hour Burden:* 1,166,337.

*Estimated Total Annual Cost:* \$131,913,786, which includes \$50,946 annualized capital and \$88,731,016 O&M costs.

*Changes in the Estimates:* There is an increase of 343,343 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. This increase is due to the increase in the number of respondents, from 129,584 to 195,710. Particularly, the number of small quantity generators increased because a better method for counting them was used this time. The number of land disposal facilities also increased from 131, which came from the 2001 BRS estimate, to 464, which came from the 2005 BRS estimate from RCRAInfo.

*Title:* NESHAP for Petroleum Refineries, Catalytic Cracking, Reforming and Sulfur Units (Renewal).

*ICR Numbers:* EPA ICR Number 1844.03, OMB Control Number 2060-0554.

*ICR Status:* This ICR is scheduled to expire on August 31, 2007. Under OMB regulations, the Agency may continue to conduct or sponsor the collection of information while this submission is pending at OMB. An Agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number. The OMB control numbers for EPA's regulations in title 40 of the CFR, after appearing in the **Federal Register** when approved, are listed in 40 CFR part 9, and displayed either by publication in the **Federal Register** or by other appropriate means, such as on the related collection instrument or form, if applicable. The display of OMB control numbers in certain EPA regulations is consolidated in 40 CFR part 9.

*Abstract:* The National Emission Standards for Hazardous Air Pollutants (NESHAP), for the regulations published at 40 CFR part 63, subpart UUU, were proposed on September 11, 1998, promulgated on April 11, 2002, and amended on February 9, 2005.

In general, all NESHAP standards require initial notifications, performance tests, and periodic reports. Owners or operators are also required to maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. These notifications, reports, and records are essential in determining compliance, and are required of all sources subject to NESHAP. Specifically, data is being collected on performance of the continuous monitoring systems for gasoline vapor and related hazardous air pollutants (HAPs), any excess emissions, and any operating parameter exceedances.

Any owner or operator subject to the provisions of this part shall maintain a file of these measurements, and retain

the file for at least five years following the date of such measurements, maintenance reports, and records. All reports are sent to the delegated state or local authority. In the event that there is no such delegated authority, the reports are sent directly to the United States Environmental Protection Agency (EPA) regional office.

**Burden Statement:** The annual public reporting and recordkeeping burden for this collection of information is estimated to average 42 (rounded) hours per response. Burden means the total time, effort, or financial resources expended by persons to generate, maintain, retain, or disclose or provide information to or for a Federal agency. This includes the time needed to review instructions; develop, acquire, install, and utilize technology and systems for the purposes of collecting, validating, and verifying information, processing and maintaining information, and disclosing and providing information; adjust the existing ways to comply with any previously applicable instructions and requirements which have subsequently changed; train personnel to be able to respond to a collection of information; search data sources; complete and review the collection of information; and transmit or otherwise disclose the information.

**Respondents/Affected Entities:** Owners or operators of major source petroleum refineries.

**Estimated Number of Respondents:** 132.

**Frequency of Response:** Initially and semiannually.

**Estimated Total Annual Hour Burden:** 11,040 hours.

**Estimated Total Annual Cost:** \$7,833,941, which includes \$0 annualized Capital Startup costs, \$6,850,602 annualized Operating and Maintenance (O&M) costs, and \$983,339 annualized Labor costs.

**Changes in the Estimates:** There is a decrease of 1,627 hours in the total estimated burden currently identified in the OMB Inventory of Approved ICR Burdens. The decrease in labor burden from the most recently approved ICR is due to an adjustment. The decrease in the total estimated labor burden as currently identified in the OMB Inventory of Approved Burden is not due to any program changes. The change in the burden and cost estimates occurred because the standard has been in effect for more than three years and the requirements are different during initial compliance (new facilities) as compared to on-going compliance (existing facilities). The previous ICR reflected those burdens and costs associated with the initial activities for

subject facilities. This includes purchasing monitoring equipment, conducting performance tests and establishing recordkeeping systems. This ICR reflects the on-going burden and costs for existing facilities since we have assumed that there are no new sources. However, it is estimated that three affected emission source units had qualified for a compliance date extension and would be complying with the initial compliance requirements during the period of this ICR (one per year) and one affected facility (0.33 per year) will conduct a performance test due to a process/operating change. Activities for existing sources include continuous monitoring of pollutants and the submission of semiannual reports. The overall result is a decrease in labor burden hours. However, the annual costs increased due to the inclusion of operation and maintenance costs for monitoring systems which are assumed to be operating after the compliance date of the rule.

Dated: August 20, 2007.
