${ }^{1}$ This area has no average hourly wage because there are no short-term, acute care hospitals in the area.
2 This a new CBSA for fiscal year 2008. To calculate the 3-year average hourly wage for this new area, we included the hospitals data from their previous geographic location for fiscal year 2006 and fiscal year 2007.

The following list represents all hospitals that are eligible to have their wage index increased by the outmigration adjustment listed in this table. Hospitals cannot receive the outmigration adjustment if they are reclassified under section 1886(d)(10) of the Act or redesignated under section 1886(d)(8) of the Act. Hospitals that have already been reclassified under section 1886(d)(10) of the Act or redesignated under section 1886(d)(8(B)) of the Act are designated
with an asterisk. We automatically assume that hospitals that have already been reclassified under section 1886(d)(10) of the Act or redesignated under section 1886(d)(8) of the Act wish to retain their reclassification/ redesignation status and waive the application of the out-migration adjustment. Section 1886(d)(10) hospitals that wished to receive the outmigration adjustment, rather than their reclassification, had to follow the termination/withdrawal procedures
specified in 42 CFR 412.273 and section III.I.3. of the preamble of the FY 2008 IPPS proposed rule. Otherwise, they were deemed to have waived the outmigration adjustment. Hospitals redesignated under section 1886(d)(8) of the Act were deemed to have waived the out-migration adjustment, unless they explicitly notified CMS that they elected to receive the out migration adjustment instead within 45 days from the publication of the proposed rule.

MCC-Major Complication or Comorbidity in MS-DRGs.
New codes 629.82 , $629.83,629.84$ and V17.40 that were listed in the proposed rule have been deleted. They will not be implemented on October 1, 2007.
${ }^{1}$ Secondary diagnosis of major problem.
${ }^{2}$ On "Only secondary diagnosis" list.
*These diagnosis codes were discussed at the March 22-23, 2007 ICD-9-CM Coordination and Maintenance Committee meeting and were not finalized in time to include in the proposed rule. They will be implemented on October 1, 2007.

Table 6B.-New Procedure Codes

| Procedure code | Description | O.R. | MDC | MS-DRG |
| :---: | :---: | :---: | :---: | :---: |
| 00.19 ....... | Disruption of blood brain barrier via infusion [BBBD] | N. |  |  |
| 00.94* ...... | Intra-operative neurophysiologic monitoring ..................................................................... | N. |  |  |

${ }^{1}$ Transition blended relative weights for FY 2008 determined as described in Step 7 in section II.I.4. of the preamble of this final rule.
2 The "short-stay outlier threshold" is calculated as $5 / 6$ ths of the geometric average length of stay of the LTC-DRG (as specified at §412.529(a), in conjunction with new §412.503).
${ }^{3}$ The "IPPS-comparable threshold" is calculated as one standard deviation from the geometric average length of stay of the same DRG under the IPPS as specified at §412.529(c)(3)(i). Note, as discussed in the RY 2008 LTCH PPS final rule (72 FR 26907), for some MS-LTC-DRGs, it was sometimes necessary to supplement IPPS hospital statistical data due to a low volume of IPPS cases, and for some MS-LTC-DRGs although IPPS hospital data may be available, a value of zero was assigned. In addition, we note that the "IPPS comparable threshold" is only applicable in the context of the payment adjustment for short-stay outliers (SSOs) at $\S 412.529$. A LTCH case that has a covered length of stay that exceeds the "SSO threshold" (and therefore is not an SSO case) but is within the value of the "IPPS comparable threshold" computed from IPPS statistical data would not be subject to the SSO adjustments at §412.529. So that it is clear that the "IPPS comparable threshold" only applies to LTCH cases that are SSOs, in instances where the value of the "IPPS comparable threshold" computed from IPPS statistical data for an MS-LTC-DRG is greater than the "SSO threshold" for the same MS-LTC-DRG, in this table we have substituted the computed value of the "IPPS comparable threshold" for the MS-LTC-DRG with the value of the "SSO threshold" (in column 6) for the same MS-LTC-DRG.

## Appendix A—Regulatory Impact Analysis

## I. Overall Impact

We have examined the impacts of this final rule with comment period as required by Executive Order 12866 (September 1993, Regulatory Planning and Review) and the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96-354), section 1102(b) of the Social Security Act, the Unfunded Mandates Reform Act of 1995 (Pub. L. 1044), and Executive Order 13132.

Executive Order 12866 (as amended by Executive Order 13258, which merely reassigns responsibility of duties, and Executive Order 13422) directs agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ( $\$ 100$ million or more in any 1 year).
We have determined that this rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the changes for FY 2008 operating and capital payments will redistribute in excess of $\$ 100$ million among
different types of inpatient cases. The market basket update to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule with comment period, will result in an approximate $\$ 3.8$ billion increase in FY 2008 operating and capital payments. This amount does not reflect changes in hospital admissions or case-mix intensity in operating PPS payments, which will also affect overall payment changes. It does assume that the -1.2 percent adjustment to the IPPS standardized amounts for adoption of the MS-DRGs will be completely offset by increases in case-mix that are the result of documentation and coding changes and not real increases in patient severity of illness.

The RFA requires agencies to analyze options for regulatory relief of small businesses. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and government agencies. Most hospitals and most other providers and suppliers are considered to be small entities, either by nonprofit status or by having revenues of $\$ 31.5$ million or less in any 1 year. (For details on the latest standards for heath care providers, we refer readers to page 33 of the Table of Small Business Size Standards at the Small Business Administration Web site at: http:// www.sba.gov/services/. contractingopportunities/
sizestandardstopics/tableofsize/index.html.) For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that this final rule with comment period will have a significant impact on small entities as explained in this Appendix. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule with comment period constitutes our final regulatory flexibility analysis. In the proposed rule, we solicited comments on our estimates and analysis of the impact of the proposed rule on those small entities. We address any public comments that we received on the impact of the changes we are finalizing in the applicable sections of this appendix.
In addition, section 1102 (b) of the Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we now define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the

Social Security Amendments of 1983 (Pub. L. 98-21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS, we continue to classify these hospitals as urban hospitals.
Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $\$ 100$ million in 1995 dollars, updated annually for inflation. That threshold level is currently approximately $\$ 120$ million. This final rule with comment period will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.
Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. As stated above, this final rule with comment period would not have a substantial effect on State and local governments.
The following analysis, in conjunction with the remainder of this document, demonstrates that this rule is consistent with the regulatory philosophy and principles identified in Executive Order 12866, the RFA, and section 1102(b) of the Act. The rule will affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant.

## II. Objectives

The primary objective of the IPPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.
We believe the changes in this final rule with comment period will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of this payment system are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

## III. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2008, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix. However, we believe that adoption of the MS-DRGs in this final rule with comment period will create a risk of increased aggregate levels of payment as a
result of more comprehensive documentation and coding. As explained earlier in this final rule with comment period, the Secretary has broad discretion under section
1886(d)(3)(A)(vi) of the Act to adjust the standardized amount so as to eliminate the effect of changes in coding or classification of discharges that do not reflect real changes in case-mix. Using this authority, the Medicare Actuary estimates that a negative adjustment of 4.8 percent will be necessary to maintain budget neutrality for the transition to the MS-DRGs. However, with the 2 -year implementation of the MS-DRG system, the 4.8 percent adjustment will be made over 3 years. Therefore, we are reducing the IPPS standardized amount by 1.2 percent for FY 2008. We will revisit the adjustment in 2 years if projected and actual data are different. The payment impacts shown below illustrate the impact of changes in hospital payment, including the -1.2 percent adjustment to the IPPS standardized amounts both prior to and following the estimated growth in case-mix. As we had done in the previous rules, we solicited comments and information about the anticipated effects of the proposed changes on hospitals and our methodology for estimating them.

## IV. Hospitals Included In and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital related costs encompass most general shortterm, acute care hospitals that participate in the Medicare program. There were 35 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short term, acute care hospitals, only the 46 such hospitals in Maryland remain excluded from the IPPS under the waiver at section 1814(b)(3) of the Act.

As of July 2007, there are 3,534 IPPS hospitals to be included in our analysis. This represents about 59 percent of all Medicareparticipating hospitals. The majority of this impact analysis focuses on this set of hospitals. There are also approximately 1,286 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. There are also 1,198 specialty hospitals and 2,262 specialty units that are excluded from the IPPS. These specialty hospitals include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, and cancer hospitals. Changes in payments for IPFs and IRFs are made through other separate rulemaking. Payment impacts for these specialty hospitals and units, other than the reasonable cost-based updates for IPFs paid under a blend, are not included in this final rule with comment period. There is also a separate rule to update and make changes to the LTCH PPS for its July 1 to June 30 rate year. However, we have traditionally used the IPPS rule to update the LTCH relative weights because the LTCH PPS uses the same DRGs as the IPPS, resulting in the LTCH relative weights being recalibrated according to the same schedule as the IPPS (that is, for each Federal fiscal year). The impacts of our policy changes on LTCHs, where applicable, are discussed below.

## V. Effects on Excluded Hospitals and Hospital Units

As of July 2007, there were 1,198 hospitals excluded from the IPPS. Of these 1,187 hospitals, 485 IPFs, 4 LTCHs, 82 children's hospitals, 11 cancer hospitals, and 15 RNHCIs are either being paid, on a reasonable cost basis or have a portion of the PPS payment based on reasonable cost principles subject to the rate-of-increase ceiling under $\S 413.40$. The remaining providers, 215 IRFs and 386 LTCHs, are paid 100 percent of the Federal prospective rate under the IRF PPS and the LTCH PPS, respectively. As stated above, IRFs and IPFs that are not under a transition period are not affected by this final rule with comment period. (IPFs under a transition period do have a portion of their PPS payment based on reasonable cost principles and thus are affected by this final rule with comment period.) The impacts of the changes to LTCHs are discussed separately below. In addition, there are 1,276 IPFs co-located in hospitals otherwise subject to the IPPS, paid on a blend of the IPF PPS per diem payment and the reasonable cost-based payment and 986 IRFs (paid under the IRF PPS) co-located in hospitals otherwise subject to the IPPS. Under §413.40(a)(2)(i)(A), the rate-ofincrease ceiling is not applicable to the 93 IPPS excluded hospitals and units in Maryland that are paid in accordance with the waiver at section 1814(b)(3) of the Act.
In the past, hospitals and units excluded from the IPPS have been paid based on their reasonable costs subject to limits as established by the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA). Hospitals that continue to be paid fully on a reasonable cost basis are subject to TEFRA limits for FY 2008. For these hospitals (cancer and children's hospitals), consistent with section 1886(b)(3)(B)(ii) of the Act, the update is the percentage increase in the FY 2008 IPPS operating market basket, which is 3.3 percent, based on Global Insights, Inc.'s 2007 second quarter forecast of the IPPS operating market basket increase. In addition, in accordance with $\S 403.752$ (a) of the regulations, RNHCIs are paid under §413.40, which also uses section 1886(b)(3)(B)(ii) of the Act to update target amounts by the rate-of-increase percentage. For RNHCIs, the update is the percentage increase in the FY 2008 IPPS operating market basket increase, which is 3.3 percent, based on Global Insight, Inc.'s 2007 second quarter forecast of the IPPS operating market basket increase.
Effective for cost reporting periods beginning on or after October 1, 2002, LTCHs that elected to be paid based on 100 percent of the LTCH PPS are paid, based on a Federal prospective payment amount that is updated annually. Existing LTCHs received a PPS
blended payment that consisted of the Federal prospective payment rate and a reasonable cost-based payment rate over a 5 year transition period, unless the LTCH elected to be paid at 100 percent of the Federal prospective rate at the beginning of any of its cost reporting periods during the 5 -year transition period. In accordance with §412.533, for cost reporting periods beginning on or after October 1, 2006, the LTCH PPS transition blend percentages are

100 percent of the Federal prospective payment amount and zero percent of the PPS amount calculated under reasonable cost principles. FY 2007 was the fifth year of the 5 -year transition period established under $\S 412.533$. Because the reasonable cost-based amount is zero percent for cost reporting periods beginning during FY 2008, no LTCH will have a portion of its PPS payment that is based in part on reasonable cost subject to the rate-of-increase ceiling during FY 2008 or thereafter. Thus, there is no longer a need for an update factor for LTCHs' TEFRA target amount for FY 2008.
The final rule implementing the IPF PPS (69 FR 66922) established a 3-year transition to the IPF PPS during which some providers will received a blend of the IPF PPS per diem payment and the TEFRA reasonable costbased payment. Under this final rule with comment period, the FY 2008 rate-of-increase percentage that is applied to FY 2007 target amounts in order to calculate FY 2008 target amounts is 3.3 percent, based on Global Insight, Inc.'s 2007 second quarter forecast of the excluded hospital market basket increase.

The impact on excluded hospitals and hospital units of the update in the rate-ofincrease limit depends on the cumulative cost increases experienced by each excluded hospital or unit since its applicable base period. For excluded hospitals and units that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these hospitals and hospital units receive. Conversely, for excluded hospitals and hospital units with per case cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that will not be reimbursed.
We note that, under §413.40(d)(3), an excluded hospital or unit whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus 50 percent of the difference between its reasonable costs and 110 percent of the limit, not to exceed 110 percent of its limit. In addition, under the various provisions set forth in §413.40, certain excluded hospitals and hospital units can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

## VI. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

## A. Basis and Methodology of Estimates

In this final rule with comment period, we are announcing policy changes and payment rate updates for the IPPS for operating costs. Changes to the capital payments are discussed in section VIII. of this Appendix.
Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2008 operating payments will increase 3.5 percent compared to FY 2007, largely due to the statutorily mandated update to the IPPS rates. This amount reflects an adjustment of -1.2 percent to the IPPS standardized amounts to offset an anticipated increase in payments resulting from improved documentation and coding that does not represent real increases in underlying resource demands and patient
acuity due to the adoption of MS-DRGs. The impacts do not illustrate changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

We have prepared separate impact analyses of the changes to each system. This section deals with changes to the operating prospective payment system. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes in this final rule with comment period. However, there are other changes for which we do not have data available that would allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented below are taken from the FY 2006 MedPAR file and the most current Provider-Specific File that is used for payment purposes. Although the analyses of the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost report were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various sources for the data used to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2006 MedPAR file, we simulated payments under the operating IPPS given various combinations of payment parameters. Any short-term, acute care hospitals not paid under the IPPS (Indian Health Service hospitals and hospitals in Maryland) were excluded from the simulations. The impact of payments under the capital IPPS, or the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of FY 2008 changes to the capital IPPS are discussed in section VIII. of this Appendix.

The changes discussed separately below are the following:

- The effects of the annual reclassification of diagnoses and procedures, transition to the MS-DRG system, the recalibration of the DRG relative weights (including the expansion to 15 charge to cost ratios) as required by section $1886(\mathrm{~d})(4)(\mathrm{C})$ of the Act.
- The effects of the changes in hospitals’ wage index values reflecting wage data from hospitals' cost reporting periods beginning during FY 2004, compared to the FY 2003 wage data.
- The effects of the wage and recalibration budget neutrality factors.
- The effects of the expiration of the labor market area transition for those hospitals that
were urban under the old labor market area designations and are now considered rural hospitals.
- The effects of geographic reclassifications by the MGCRB that will be effective in FY 2008.
- The effects of the adjustment to the application of the rural floor budget neutrality provision on the wage index instead of on the standardized amount.
- The effects of application of an imputed rural floor to States that have no rural areas and to States that have rural areas but no IPPS hospitals are located in those areas (69 FR 49109).
- The effects of the September 30, 2007 expiration of section 508 of Pub. L. 108-173, which allowed qualifying hospitals to appeal the wage index classification otherwise applicable to the hospital and apply for reclassification to another area of the State in which the hospital is located (or, at the discretion of the Secretary, to an area within a contiguous State).
- The effects of section 505 of Pub. L. 108173, which provides for an increase in a hospital's wage index if the hospital qualifies by meeting a threshold percentage of residents of the county where the hospital is located who commute to work at hospitals in counties with higher wage indexes.
- The effect of the budget neutrality adjustment being made for the adoption of the MS-DRGs under section 1886(d)(3)(A)(iv) of the Act for the change in aggregate payments that is a result of changes in the coding or classification of discharges that do not reflect real changes in case-mix.
- The total estimated change in payments based on FY 2008 policies relative to payments based on FY 2007 policies.
To illustrate the impacts of the FY 2008 changes, our analysis begins with a FY 2007 baseline simulation model using: the FY 2008 update of 3.3 percent; the FY 2007 DRG GROUPER (Version 24.0); the most current CBSA designations for hospitals based on OMB’s MSA definitions; the FY 2007 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating DRG and outlier payments.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Pub. L. 109-171, provides that for FY 2007 and subsequent years, the update factor will be reduced by 2.0 percentage points for any hospital that does not submit quality data in a form and manner and at a time specified by the Secretary. At the time this impact was prepared, 146 providers did not receive the full market basket rate-of-increase for FY 2007 because they failed the quality data submission process. For purposes of the simulations shown below, we modeled the payment changes for FY 2008 using a reduced update for these 146 hospitals. However, we do not have enough information to determine which hospitals will not receive the full market basket rate-of-increase for FY 2008 at this time.
Each policy change, statutorily or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2008 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our final comparison illustrates the percent change in payments per case from FY 2007 to FY 2008. Three factors not discussed separately have significant impacts here. The first is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2008 using the most recently forecasted hospital market basket increase for FY 2008 of 3.3 percent. (Hospitals that fail to comply with the quality data submission requirements to receive the full update will receive an update reduced by 2.0 percentage points to 1.3 percent.) Under section 1886(b)(3)(B)(iv) of the Act, the updates to the hospital-specific amounts for SCHs and for MDHs are also equal to the market basket increase, or 3.3 percent.
A second significant factor that affects the changes in hospitals' payments per case from FY 2007 to FY 2008 is the change in a hospital's geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2007 that are no longer reclassified in FY 2008. Conversely, payments may increase for hospitals not reclassified in FY 2007 that are reclassified in FY 2008. Particularly with the expiration of section 508 of Pub. L. 108-173, the reclassification provision, these impacts can be quite substantial, so if a relatively small number of hospitals in a particular category lose their reclassification status, the percentage change in payments for the category may be below the national mean.
A third significant factor is that we currently estimate that actual outlier payments during FY 2007 will be 4.6 percent of total DRG payments. When the FY 2007 final rule was published, we projected FY 2007 outlier payments would be 5.1 percent of total DRG plus outlier payments; the average standardized amounts were offset correspondingly. The effects of the lower
than expected outlier payments during FY 2008 (as discussed in the Addendum to this final rule with comment period) are reflected in the analyses below comparing our current estimates of FY 2007 payments per case to estimated FY 2008 payments per case (with outlier payments projected to equal 5.1 percent of total DRG payments).

## B. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2008. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,534 hospitals included in the analysis.
The next four rows of Table I contain hospitals categorized according to their geographic location: All urban, which is further divided into large urban and other urban; and rural. There are 2,539 hospitals located in urban areas included in our analysis. Among these, there are 1,406 hospitals located in large urban areas (populations over 1 million), and 1,133 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 995 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.
The second part of Table I shows hospital groups based on hospitals' FY 2008 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the number of hospitals paid based on these categorizations after consideration of geographic reclassifications (including
reclassifications under section 1886(d)(8)(B) and section 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,578 , $1,425,1,153$ and 956 , respectively.
The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive DSH payments, or some combination of these two adjustments. There are 2,480 nonteaching hospitals in our analysis, 815 teaching hospitals with fewer than 100 residents, and 239 teaching hospitals with 100 or more residents.
In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban after geographic reclassification, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next five rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, RRCs, and MDHs), as well as rural hospitals not receiving a special payment designation. There were 194 RRCs, 367 SCHs, 150 MDHs, 99 hospitals that are both SCHs and RRCs, and 8 hospitals that are both an MDH and an RRC.
The next series of groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGCRB for FY 2008. The second grouping shows the MGCRB rural reclassifications.
The final two groupings are based on the type of ownership and the hospital's Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2004 Medicare cost reports.

## C. Effects of the Changes to the $D R G$

 Reclassifications and Relative Cost-Based Weights (Column 2)In Column 2 of Table I, we present the combined effects of the DRG reclassifications and recalibration, as discussed in section II. of the preamble to this final rule with comment period. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.
As discussed in the preamble of this final rule with comment period, we are continuing the 3 -year transition from charge-based to cost-based relative weights. In addition, we are implementing the MS-DRGs in a two year transition that will increase the number of DRGs from 538 to 745. For FY 2008, the first year of the transition, 50 percent of the relative weight for a DRG is based on the twothirds cost weight/one-third charge weight calculated using FY 2006 MedPAR data grouped to the Version 24.0 (FY 2007) DRGs. The remaining 50 percent of the FY 2008 relative weight for a DRG is based on the twothirds cost weight/one-third charge weight calculated using FY 2006 MedPAR grouped to the Version 25.0 MS-DRGs. Furthermore, the relative weights have been calculated using 15 cost centers as described in Section H of the preamble whereas the relative weights in FY 2007 were calculated using 13 cost centers. In column 2, we compare aggregate payments using the blended FY 2008 relative weights ( $2 / 3$ cost, $1 / 3$ charge, 50 percent MS-DRGs and 50 percent CMS DRGs) for the MS-DRGs to the FY 2007 blended relative weights ( $1 / 3$ cost, $2 / 3$ charge) for the CMS DRGs. The methods of calculating the relative weights and the reclassification changes to the GROUPER are described in more detail in section II.H. of the preamble to this final rule with comment period. We note that, consistent with section 1886(d)(4)(C)(iii) of the Act, we are applying a budget neutrality factor to ensure that the overall payment impact of the DRG changes (combined with the wage index changes) is budget neutral. This budget neutrality factor of 0.996563 is applied to payments in Column 4 and not Column 2 because it is a combined DRG reclassification and recalibration and wage index budget neutrality factor.
The changes to the relative weights and DRGs shown in column 2 are prior to any offset for budget neutrality. The "All Hospitals" line indicates that changes in this column will increase payments by 0.4 percent. However, as stated earlier, the changes shown in this column are combined with revisions to the wage index and a single budget neutrality adjustment is made for these changes and shown in column 4. Thus, the impact after accounting only for budget neutrality for changes to the DRG relative weights and classification is somewhat lower than the figures shown in this column (approximately 0.4 percent). We estimate that changes to the relative weights and DRGs
will increase payments to hospitals located in large urban areas (populations over 1 million) by approximately 0.9 percent before applying an adjustment for budget neutrality. These changes generally increase payments to hospitals in all urban areas ( 0.5 percent) and large teaching hospitals ( 0.9 percent) before applying an adjustment for budget neutrality. Rural hospitals will generally experience a decrease in payments from these changes ( -0.9 percent) before applying an adjustment for budget neutrality. Cardiac specialty hospitals would experience the greatest decline in payments ( -2.5 percent) before applying an adjustment for budget neutrality from the changes to blended MSDRGs and the blended relative cost weights.

## D. Effects of Wage Index Changes (Column 3)

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for FY 2008 is based on data submitted for hospital cost reporting periods beginning on or after October 1, 2003 and before October 1, 2004.

The estimated impact of the wage data on hospital payments is isolated in Column 3 by holding the other payment parameters constant in this simulation. That is, Column 3 shows the percentage changes in payments when going from a model using the FY 2007 wage index, based on FY 2003 wage data and having a 100 -percent occupational mix adjustment applied, to a model using the FY 2008 pre-reclassification wage index, also having a 100 -percent occupational mix adjustment applied, based on FY 2004 wage data. The wage data collected on the FY 2004 cost report include overhead costs for contract labor that were not collected on FY 2003 and earlier cost reports. The impacts below incorporate the effects of the FY 2004 wage data collected on hospital cost reports, including additional overhead costs for contract labor compared to the wage data from FY 2003 cost reports that were used to calculate the FY 2007 wage index.

Column 3 shows the impacts of updating the wage data using FY 2004 cost reports. Overall, the new wage data will lead to a -0.1 percent change for all hospitals before application of the wage and DRG recalibration budget neutrality adjustment shown in column 4. Thus, the figures in this column are approximately 0.1 below what they otherwise would be if they also illustrated a budget neutrality adjustment solely for changes to the wage index. Among the regions, the largest increase is in the rural Pacific region, which experiences a 0.8 percent increase before applying an adjustment for budget neutrality. The largest decline from updating the wage data is seen in rural New England region (a 1.2 percent decrease) before applying an adjustment for budget neutrality. The decrease in the prereclassified wage index for rural New England is due to a change in our policy regarding how the wage data for New England deemed county hospitals are treated
in the wage index calculation, as discussed in section III.I.10. of the preamble of this final rule with comment period. Also discussed in that section, the policy change does not affect the post-reclassified wage data that are used in setting the IPPS rates and reflected in Tables 4A, 4B, and 4C of the Addendum to this final rule with comment period. Thus, even though the prereclassified wage index will decline because of the change we made to our policy with respect to New England deemed counties, it will have no effect under the IPPS because we use the post-reclassified wage indices for payment. However, non-PPS payment systems (SNF, IRF, and HHA, among others) that use the pre-reclassified wage index may be affected by this policy change. However, we are limiting this policy change for New England deemed counties only to IPPS hospitals because it was only addressed in the FY 2008 IPPS proposed rule. Any change to non-PPS provider wage indices will be addressed in the respective payment rules for these payment systems.
In looking at the wage data itself, the national average hourly wage increased 4.3 percent compared to FY 2007. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the national 4.3 percent increase in average hourly wage. Of the 3,475 hospitals with wage data for both FYs 2007 and 2008, 1,712 , or 49.3 percent, experienced an average hourly wage increase of 4.3 percent or more.

The following chart compares the shifts in wage index values for hospitals for FY 2008 relative to FY 2007. Among urban hospitals, 40 will experience an increase of more than 5 percent and less than 10 percent and 4 will experience an increase of more than 10 percent. Among rural hospitals, 37 will experience an increase of more than 5 percent and less than 10 percent, and 3 will experience an increase of more than 10 percent. However, 940 rural hospitals will experience increases or decreases of less than 5 percent, while 2,384 urban hospitals will experience increases or decreases of less than 5 percent. Fifty urban hospitals will experience decreases in their wage index values of more than 5 percent and less than 10 percent. Fifteen urban hospitals will experience decreases in their wage index values of greater than 10 percent. Two rural hospitals will experience decreases of more than 5 percent, but less than 10 percent. No rural hospitals will experience decreases of more than 10 percent. These figures are changes in the wage index only which adjusts only 69.7 or 62 percent of a hospital's total payment depending upon whether the wage index is greater or less than 1.0. Therefore, these figures are illustrating a somewhat larger change in the wage index than would occur to the hospital's total payment.
The following chart shows the projected impact for urban and rural hospitals.

| Percentage change in area wage index values | Number of hospitals |  |
| :---: | :---: | :---: |
|  | Urban | Rural |
| Increase more than 10 percent | 4 | 3 |
| Increase more than 5 percent and less than 10 percent | 40 | 37 |
| Increase or decrease less than 5 percent .................................................................................................. | 2,384 | 940 |
| Decrease more than 5 percent and less than 10 percent | 50 | 2 |
| Decrease more than 10 percent ............................................................................................................... | 15 | 0 |

## E. Combined Effects of DRG and Wage Index Changes (Column 4)

Section 1886(d)(4)(C)(iii) of the Act requires that changes to DRG reclassifications and the relative weights cannot increase or decrease aggregate payments. In addition, section 1886(d)(3)(E) of the Act specifies that any updates or adjustments to the wage index are to be budget neutral. As noted in the Addendum to this final rule with comment period, in determining the budget neutrality factor, we equated simulated aggregate payments for FY 2007 and FY 2008 using the FY 2006 Medicare utilization data after applying the changes to the DRG relative weights and the wage index.
We computed a wage and DRG recalibration budget neutrality factor of 0.996563 . The 0.0 percent impact for all hospitals demonstrates that these changes, in combination with the budget neutrality factor, are budget neutral. In Table I, the combined overall impacts of the effects of both the DRG reclassifications and the updated wage index are shown in Column 4. The estimated changes shown in this column reflect the combined effects of the changes in Columns 2 and 3 and the budget neutrality factor for the revised FY 2008 wage index. Due to the changes to the application of the rural floor budget neutrality, this column does not include the wage index floor for urban areas as required by section 4410 of Pub. L. 105-33. The effects of that provision are included in Column 7. There also may be some variation of plus or minus 0.1 percentage point due to rounding.

## F. Effects of the Expiration of the 3-Year

 Provision Allowing Urban Hospitals That Were Converted to Rural as a Result of the FY 2005 Labor Market Area Changes to Maintain the Wage Index of the Urban Labor Market Area in Which They Were Formerly Located (Column 5)The policy adopted in FY 2005 for urban hospitals that became rural under the new labor market area definitions is to expire in FY 2008. In FY 2005, we adopted a policy that allowed urban hospitals that became rural under the new labor market area regions to maintain the wage index assignment of the MSA where they were located for the 3-year period FY 2005, FY 2006, and FY 2007. Beginning in FY 2008, these hospitals will receive their statewide rural wage index or their FY 2008 MGCRB reclassified wage index. Column 5 shows the impact of the expiration of the labor market area transition for those hospitals that were urban under the old labor market area designations and are now considered rural hospitals. The rural hospital row shows a 0.2 percent decrease from the end of the provision as these hold
harmless hospitals are now considered geographically rural and are now receiving the wage index of the MSA where they are currently located.

## G. Effects of MGCRB Reclassifications (Column 6)

Our impact analysis to this point has assumed hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on other bases than where they are geographically located). The changes in Column 6 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2008 which affect hospitals' wage index area assignments.

By February 28 of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital's reclassification request for the purpose of using another area's wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals have 45 days from publication of the IPPS rule in the Federal Register to decide whether to withdraw or terminate an approved geographic reclassification for the following year. This column reflects all MGCRB decisions, Administrator appeals and decisions of hospitals for FY 2008 geographic reclassifications.
The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, we are applying an adjustment of 0.991695 to ensure that the effects of the section 1886(d)(10) reclassifications are budget neutral. (See section II.A. of the Addendum to this final rule with comment period.) Geographic reclassification generally benefits hospitals in rural areas. We estimate that geographic reclassification will increase payments to rural hospitals by an average of 1.8 percent.

## H. Effects of the Adjustment to the

 Application of the Rural Floor (Column 7)As discussed in section III.G. of the preamble of this final rule with comment period, section 4410 of Pub. L. 105-33 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the area wage index determined for the state's rural area. Since FY 1998, we have implemented this provision by adjusting the standardized amounts. In this final rule with comment period, we are changing how we apply budget neutrality to the rural floor beginning in FY 2008. Rather than applying a budget
neutrality adjustment to the standardized amount, a uniform budget neutrality adjustment is applied to the wage index. Therefore, we are applying an adjustment to the wage index of 0.996660 ( -0.33 percent) to ensure that the rural floor adjustments are budget neutral as indicated by the zero effect on payments to hospitals overall.
Column 7 shows the projected impact of change in the application of the rural floor. The column compares the postreclassification FY 2008 wage index of providers before the rural floor adjustment and the post-reclassification FY 2008 wage index of providers with the rural floor adjustment. Only urban hospitals can benefit from the rural floor provision. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment. We project rural hospitals will experience a 0.1 percent decrease in payments. We project hospitals located in other urban areas (populations of 1 million or fewer) will experience a 0.1 percent increase in payments. The rural floor will benefit 69 percent of the hospitals in New Hampshire (9) and 39 percent of the hospitals in Connecticut (13), explaining the average increase of 0.9 percent shown in the table for hospitals located in New England. The average increase among hospitals in the Pacific region is estimated at 0.6 percent and is explained by application of the rural floor to 62 percent of the hospitals in California (207) and 18 percent of the hospitals in Washington (9).

## I. Effects of Application of the Imputed Rural Floor (Column 8)

The FY 2005 IPPS final rule (69 FR 49109) established a temporary imputed rural floor for all urban States from FY 2005 to FY 2007. The rural floor requires that an urban wage index cannot be lower than the wage index for any rural hospital in that State. Therefore, an imputed rural floor was established for States that do not have rural areas or rural IPPS hospitals. In this final rule, we are extending the imputed rural floor for one additional year through FY 2008.
Column 8 shows the effects of application the imputed rural floor. Only hospitals located in New Jersey had been affected by the provision. Therefore only urban providers in the Mid-Atlantic region (NJ) will experience an increase by 0.3 percent, from the imputed rural floor being applied in that State.
J. Effects of the Expiration of Section 508 of Pub. L. 108-173 (Column 9)

Section 508 of Pub. L. 108-173 will expire on September 30, 2007. As stated in the FY 2007 IPPS final rule ( 71 FR 48333), we established procedural rules under section 1886(d)(10)(D)(v) of the Act to address specific circumstances where individual and group reclassifications involve a section 508 hospital. In the final rule, the rules were designed to recognize the special circumstances of section 508 hospital reclassifications ending mid-year during FY 2007 and were intended to allow previously approved reclassifications to continue through March 31, 2007, and new section 1886(d)(10) reclassifications to begin April 1, 2007, upon the conclusion of the section 508 reclassifications. Under these procedural rules, some section 1886(d)(10) hospital reclassifications are only in effect for the second half of the fiscal year. However, Division B, Title I, section 106(a) of the MIEA-TRHCA (Pub. L. 109-432) extended any geographic reclassifications of hospitals that would expire on March 31, 2007, by 6 months until September 30, 2007. For FY 2008, the providers that had been reclassified under section 508 in FY 2007 will receive payment using the wage index for the area where they are currently located. The impact of the expiration of the policy is modeled in Column 8 of Table I. Section 508 of Pub. L. 108-173 was not a budget neutral provision of the statute. Its enactment increased total payments for Medicare inpatient hospital services. Therefore, relative to FY 2007, the expiration of section 508 of Pub. L. 108-173 will reduce Medicare inpatient hospital payments by an estimated 0.1 percent.

## K. Effects of the Wage Index Adjustment for Out-Migration (Column 10)

Section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. With the out-migration adjustment, rural providers will experience a 0.1 percent increase in payments in FY 2008 relative to no adjustment at all. We included these additional payments to providers in the impact table shown above, and we estimate the impact of these providers receiving the out-migration increase to be approximately \$26 million.

## L. Effects of All Changes With CMI <br> Adjustment Prior to Estimated Growth (Column 11)

Column 11 compares our estimate of payments per case between FY 2007 and FY 2008 with all changes reflected in this final rule with comment period for FY 2008,
including a 0.988 adjustment to the payment rates to account for anticipated
improvements in documentation and coding that is expected to increase case-mix. We generally apply an adjustment to the DRGs to ensure budget neutrality assuming constant utilization. However, with the 2-year transition to the MS-DRGs, the number of DRGs expands from 538 to 745. Therefore, the Office of the Actuary estimates an increase in the CMI due to improved coding and we have applied an additional adjustment to achieve budget neutrality. However, because we modeled the impact, including the adjustment for anticipated case-mix increase but not the actual case-mix increase itself in column 11, this column illustrates a total payment change that is less than what is anticipated to occur.

## M. Effects of All Changes With CMI Adjustment and Estimated Growth (Column 12)

Column 12 compares our estimate of payments per case between FY 2007 and FY 2008, incorporating all changes reflected in this final rule with comment period for FY 2008 (including statutory changes). This column includes all of the policy changes and assumes the 1.2 percent increase in casemix from improved documentation and coding will occur equally across all hospitals.

Column 12 reflects the impact of all FY 2008 changes relative to FY 2007, including those shown in Columns 2 through 10. The average increase for all hospitals is approximately 3.5 percent. This increase includes the effects of the 3.3 percent market basket update. It also reflects the 0.5 percentage point difference between the projected outlier payments in FY 2008 (5.1 percent of total DRG payments) and the current estimate of the percentage of actual outlier payments in FY 2007 (4.6 percent), as described in the introduction to this Appendix and the Addendum to this final rule with comment period. As a result, payments are projected to be 0.5 percentage points lower in FY 2007 than originally estimated, resulting in a 0.5 percentage point greater increase for FY 2008 than would otherwise occur. In addition, the impact of expiration of section 508 of Pub. L. 108-173 reclassification accounts for a 0.1 percent decrease in estimated payments. As stated earlier, section 1886(d)(13) of the Act provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. This provision of the statute is not budget neutral. Although the out-migration adjustment will increase payments to some hospitals in FY 2008 relative to not having an adjustment at all, the total number of hospitals receiving the adjustment will be less in FY 2008 than FY 2007, resulting in a 0.1 percent reduction in total IPPS payments. There might also be interactive effects among the various factors comprising the payment system that we are not able to isolate. For these reasons, the values in Column 12 may not equal the product of the percentage changes described above.

The overall change in payments per case for hospitals in FY 2008 is estimated to
increase by 3.5 percent. Hospitals in urban areas will experience an estimated 3.8 percent increase in payments per case compared to FY 2007. Hospitals in large urban areas will experience an estimated 4.3 percent increase and hospitals in other urban areas will experience an estimated 3.2 percent increase in payments per case in FY 2008. Hospital payments per case in rural areas are estimated to increase 1.2 percent. The increases that are larger than the national average for larger urban areas and smaller than the national average for other urban and rural areas are largely attributed to the differential impact of adopting MS-DRGs.
Among urban census divisions, the largest estimated payment increases will be 5.2 percent in the Pacific region (generally attributed to MS-DRGs, wage data and application of the rural floor) and 4.2 percent in Puerto Rico (mostly due to MS-DRGs). The smallest urban increase is estimated at 3.3 percent in the East South Central region (because of MS-DRGs, new wage data, MGCRB reclassification and application of the rural floor).

Among rural regions in Column 12, the providers in the West South Central region experience an estimated decrease in payments by 0.1 percent (mostly due to MSDRGs). The Pacific and South Atlantic regions will have the highest increases among rural regions with 2.5 and 2.0 percent estimated increases, respectively. Again, increases in rural areas are generally less than the national average due to the adoption of MS-DRGs.

Among special categories of rural hospitals in Column 12, the SCH providers will receive an estimated increase in payments of 0.2 percent, and the RRCs will experience an estimated increase in payments by 2.7 percent.

Urban hospitals reclassified for FY 2008 are anticipated to receive an increase of 3.6 percent, while urban hospitals that are not reclassified for FY 2008 are expected to receive an increase of 3.9 percent. Rural hospitals reclassifying for FY 2008 are anticipated to receive a 1.8 percent payment increase.
N. Effects of Policy on Payment Adjustments for Low-Volume Hospitals

For FY 2008, we are continuing to apply the volume adjustment criteria we specified in the FY 2005 IPPS final rule (69 FR 49099). We expect that two providers will receive the low-volume adjustment for FY 2008. We estimate the impact of these providers receiving the additional 25-percent payment increase to be approximately $\$ 36,000$.

## O. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2008 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated payments per case for FY 2007 with the average estimated payments per case for FY 2008, as calculated under our models. Thus, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The percentage changes shown in the last column of Table II equal
the percentage changes in average payments from Column 12 of Table I.

Table II.—Impact Analysis of Changes for FY 2008 Operating Prospective Payment System
[Payments per case]

|  |  |  |  |
| ---: | :--- | ---: | ---: | ---: | ---: |

table il.-Impact Analysis of Changes for Fy 2008 Operating Prospective Payment System-Continued [Payments per case]

${ }^{1}$ These payment amounts per case do not reflect any estimates of annual case-mix increase.

## VII. Effects of Other Policy Changes

In addition to those policy changes discussed above that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule with comment period. Generally, we have limited or no specific data available with which to estimate the impacts of these changes. Our estimates of the likely impacts associated with these other changes are discussed below.

## A. Effects of Policy on Hospital-Acquired

 Conditions, Including InfectionsIn section II.F. of the preamble of this final rule with comment period, we discuss our implementation of section 5001(c) of Pub. L. 109-171, which requires the Secretary to identify, by October 1, 2007, at least two conditions that are (a) high cost or high volume or both, (2) result in the assignment of a case to a DRG that has a higher payment when present as a secondary diagnosis, and (c) could reasonably have been prevented through application of evidence-based guidelines. For discharges occurring on or after October 1, 2008, hospitals will not receive additional payment for cases in which one of the selected conditions was not present on admission. That is, the case will be paid as though the secondary diagnosis was not present. However, the statute also requires the Secretary to continue counting the condition as a secondary diagnosis that results in a higher IPPS payment when doing
the budget neutrality calculations for DRG reclassifications and recalibration. Therefore, we do our budget neutrality calculations as though the payment provision did not apply but Medicare will make a lower payment to the hospital for the specific case that includes the secondary diagnosis. Thus, the provision will result in cost savings to the Medicare program.
We note that the provision will only apply when the selected conditions are the only secondary diagnosis present on the claim that will lead to higher payment. Therefore, if a nonselected secondary diagnosis that leads to the same higher payment is on the claim, the case will continue to be assigned to the higher paying DRG and there will be no savings to Medicare from the case. Patients will generally have multiple secondary diagnoses during a hospital stay. Patients having one MCC or CC will frequently have additional conditions that also lead to higher payment. Therefore, in only a small percentage of the cases will the patient have only one secondary diagnosis that would lead to higher payment. The statute does not allow the payment provision to go into effect until October 1, 2008. For this reason, there will be no saving for FY 2008. Any savings associated with this provision will not be realized until FY 2009. We estimate this provision will save $\$ 20$ million per year beginning October 1, 2008. Our savings estimates for the next 5 fiscal years are shown below:

| Year | Savings |
| :---: | :---: |
| FY 2008 ............................... | \$0 |
| FY 2009 ............................... | 20 |
| FY 2010 ............................... | 20 |
| FY 2011 .............................. | 20 |
| FY 2012 ............................... | 20 |

B. Effects of MS-LTC-DRG Reclassifications and Relative Weights for LTCHs
In section II.I. of the preamble to this final rule with comment period, we discuss the adoption of the MS-LTC-DRGs (Version 25. of the CMS GROUPER). We also discuss that we are implementing a 2 -year transition to MS-LTC-DRGs, in which we determined transition blended MS-LTC-DRG relative weights for FY 2008. We established in the RY 2008 LTCH PPS final rule ( 72 FR 26880 through 26884), beginning with the update for FY 2008, that the annual update to the classification and relative weights under the LTCH PPS will be done in a budget neutral manner, such that estimated aggregate LTCH PPS payments will be unaffected; that is, they will be neither greater than nor less than the estimated aggregate LTCH PPS payments that would have been made without the MS-LTC-DRG classification and relative weight changes. However, if the budget neutrality policy had not been adopted, we would not have multiplied each MS-LTC-DRG transition blended relative weight by 1.020905 in the first step of the budget
neutrality process (normalization), and we would not have applied a budget neutrality factor of 0.996467 to the transition blended relative weights after normalization based on the most recent available claims data (FY 2006 MedPAR files) for the 376 LTCHs in our database. With the adoption of this budget neutrality policy, we estimate that with the changes to the MS-LTC-DRG classifications and relative weights for FY 2008, there will be no change in aggregate LTCH PPS payments. In applying the budget neutrality adjustment described above, we assumed constant utilization.

## C. Effects of New Technology Add-On Payments

In section II.J. of the preamble to this final rule, we discuss add-on payments for new medical services and technologies. As explained in that section, add-on payments for new technology under section
1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed earlier in this final rule with comment period, we are not approving Wingspan ${ }^{\circledR}$ for new technology add-on payments for FY 2008. Thus, we will not make any IPPS add-on payments for this technology in FY 2008. In addition, for FY 2008, we have discontinued new technology add-on payments for GORE TAG, Restore ${ }^{\circledR}$, and X STOP. In the FY 2007 IPPS final rule (71 FR 48344), we estimated that FY 2007 IPPS new technology add-on payments would be $\$ 16.61$ million, $\$ 6.01$ million, and $\$ 9.35$ million, respectively, for these technologies. We have no additional information to further refine these estimates. Therefore, we estimate that Medicare's new technology add-on payments will decline by approximately $\$ 32$ million (the sum of our estimates for FY 2007) in FY 2008 compared to FY 2007.
D. Effects of Requirements for Hospital Reporting of Quality Data for Annual Hospital Payment Update

In section IV.A. of the preamble of this final rule with comment period, we discuss the requirements for hospitals to report quality data in order for hospitals to receive the full annual hospital payment update for FY 2008 and FY 2009. We also note that, for the FY 2008 payment update, hospitals must pass our validation requirement of a minimum of 80 percent reliability, based upon our chart-audit validation process, for the first three quarters of data from CY 2006. These data were due to the QIO Clinical Warehouse by August 15, 2006 (first quarter CY 2006 discharges), November 15, 2006 (second quarter CY 2006 discharges), and February 15, 2007 (third quarter CY 2006 discharges). We have continued our efforts to ensure that QIOs provide assistance to all hospitals that wish to submit data. In the preamble of this final rule with comment period, we are finalizing additional validation criteria to ensure that the quality data being sent to CMS are accurate. The requirement of 5 charts per hospital will result in approximately 21,500 charts per quarter total submitted to the agency. We reimburse hospitals for the cost of sending charts to the Clinical Data Abstraction Center (CDAC) at the rate of 12 cents per page for
copying and approximately $\$ 4.00$ per chart for postage. Our experience shows that the average chart received at the CDAC is approximately 150 pages. Thus, the agency will have expenditures of approximately $\$ 473,200$ per quarter to collect the charts. Given that we reimburse for the data collection effort, we believe that a requirement for five charts per hospital per quarter represents a minimal burden to the participating hospital.

## E. Effects of Policy on Cancellation of Classification of Acquired Rural Status and Rural Referral Centers

In section IV.C.2. of the preamble of this final rule with comment period, we are revising our regulations to change the effective date of cancellation of acquired rural status for hospitals classified as rural referral centers based on acquired rural status. The current effective date is the hospital's next full cost reporting period following the date of its request for cancellation. The new effective date will be the beginning of the Federal fiscal year following both the date of the hospital's request for cancellation and at least one 12month cost reporting period in which it has been in acquired rural status. Currently, there are about 100 IPPS hospitals that have acquired rural status and about 7 hospitals that became rural referral centers based on acquired rural status. During this fiscal year (FY 2007), we have only received requests for cancellations from about five hospitals, all of which became rural referral centers after acquiring rural status. However, this number may increase if the current policy is not changed. We anticipate that the policy change will not have a significant impact on IPPS hospitals.

## F. Effects of Policy on Payment for IME and Direct GME

In section IV.D.3. of the preamble of this final rule with comment period, we discuss our policy related to whether vacation and sick leave as well as orientation should be included in the FTE count for IME and direct GME payment purposes. We had proposed that, for cost reporting periods beginning on or after October, 1, 2007, for direct GME and IME, time spent by residents on vacation or sick leave be removed from the total time considered to constitute an FTE resident. In addition, we proposed to continue our existing policy to count time spent by residents in orientation activities for both IME and direct GME payment purposes and proposed to change our policy to begin counting time spent by residents in orientation activities in nonhospital settings for purposes of both IME and direct GME payments (where the hospital otherwise met the regulatory requirements to count time spent by residents in the nonhospital setting). However, as explained in section IV.D.3. of the preamble of this final rule with comment period, because of concerns related to implementation issues raised by the commenters, at this time we are not finalizing our proposal to remove vacation and sick leave from the total time considered to constitute an FTE resident. Therefore, there is no impact for this provision. In
addition, there is no impact from the clarification of the policy for orientation time because it is not a change in policy. We anticipate the additional time counted by hospitals for orientation activities in nonhospital settings under the revised policy will be negligible and will have minimal impact.

## G. Effects of Policy Changes Relating to

 Emergency Services Under EMTALA During an Emergency PeriodIn section IV.F. of the preamble of this final rule with comment period, we are amending the EMTALA regulations regarding EMTALA implementation in emergency areas during an emergency period. Section 1135 of the Act authorizes the Secretary to temporarily waive or modify the application of several requirements and their implementing regulations as they relate to actions taken in an emergency area during an emergency period. The EMTALA regulations (§489.24(a)(2)) now specify that sanctions for inappropriate transfer during a national emergency do not apply to a hospital with a dedicated emergency department located in an emergency area.
To make our regulations better reflect the scope of the authority under section 1135 of the Act, we are revising them to clarify that such waivers also may apply to sanctions for the redirection or relocation of an individual to an alternate location to receive a medical screening examination where that direction or relocation occurs pursuant to a State emergency preparedness plan. We also are revising the regulations to incorporate changes made by the Pandemic and AllHazards Preparedness Act. That legislation amended section 1135 of the Act to state that, in the case of a public health emergency that involves a pandemic infectious disease, sanctions for the direction or relocation of an individual to an alternative location for screening may be waived based on either a State emergency preparedness plan or a State pandemic preparedness plan, whichever applies in the State. In addition, section 1135 of the Act was amended to create an exception to the otherwise applicable 72hour limitation on the duration of waivers or modifications of sanctions for EMTALA violations in cases where a public health emergency involves a pandemic infectious disease (such as pandemic influenza).

As described more fully earlier in this preamble, these changes are not discretionary and do not impose any substantive new requirements. On the contrary, they merely update our regulations to make them consistent with current statutory requirements. Because of this, we are estimating no impact on Medicare expenditures and no significant impact on hospitals with emergency departments.

## H. Effects of Policy on Disclosure of Physician Ownership in Hospitals and

 Patient Safety MeasuresIn section IV.G. of the preamble of this final rule with comment period, we discuss our adoption of a requirement relating to disclosure of physician ownership in hospitals and to increase patient safety measures. In the strategic and implementing
plan included in our 'Final Report to the Congress and Strategic and Implementing Plan'" required under section 5006 of the Deficit Reduction Act of 2005, we stated that we would adopt a disclosure requirement that would require hospitals to disclose to patients whether they are physician-owned and, if so, the names of the physicianowners. In addition, we recognize that patients should be made aware of whether or not a physician is present in the hospital at all times, and the hospital's plans to address patients' emergency medical conditions when a physician is not present.
In section IX.B. of the preamble of this final rule with comment period, we have revised our proposed estimate of the cost to affected hospitals of these disclosures to more accurately reflect the volume of disclosures anticipated. Despite these changes, we continue to believe this final rule with comment period change will impose only minimal additional costs on hospitals. We believe the cost of implementing these provisions borne by hospitals will be limited to the ongoing cost of providing written notices to patients. In addition, the changes concerning disclosure of physician ownership in hospitals are consistent with current practices of members of the physician-owned specialty hospital associations. Therefore, we do not believe that these changes will have any significant economic impact on hospitals.

## I. Effects of Implementation of Rural

 Community Hospital Demonstration ProgramIn section IV.H. of the preamble to this final rule with comment period, we discuss our implementation of section 410A of Pub. L. 108-173 that required the Secretary to establish a demonstration that will modify reimbursement for inpatient services for up to 15 small rural hospitals. Section $410 \mathrm{~A}(\mathrm{c})(2)$ requires that "in conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented." As discussed in section IV.H. of the preamble to this final rule with comment period, we are satisfying this requirement by adjusting national IPPS rates by a factor that is sufficient to account for the added costs of this demonstration. We estimate that the average additional annual payment for FY 2008 that will be made to each participating hospital under the demonstration will be approximately $\$ 1,075,765$. We based this estimate on the recent historical experience of the difference between inpatient cost and payment for hospitals that are participating in the demonstration. For the 9 participating hospitals, the total annual impact of the demonstration program is estimated to be $\$ 9,681,893$. The adjustment factor to the Federal rate used in calculating Medicare inpatient prospective payments as a result of the demonstration is 0.999903 .
J. Effects of Policy on Services Furnished to Beneficiaries in Custody of Penal Authorities

In section VII. of the preamble of this final rule with comment period, we discuss our
revision of our regulations relating to the special conditions under which Medicare payment may be made for services furnished to individuals in custody of penal authorities. We are indicating that, for purposes of Medicare payment, individuals who are in custody include, but are not limited to, individuals who are under arrest, incarcerated, imprisoned, escaped from confinement, under supervised release, on medical furlough, required to reside in mental health facilities, required to reside in halfway houses, required to live under home detention, or confined completely or partially in any way under a penal statute or rule. This definition is in accordance with how custody has been defined by Federal courts for purposes of the habeas corpus protections of the Constitution and is consistent with current CMS policy. We anticipate that this change will have no measurable impact on Medicare expenditures.

## VIII. Impact of Changes in the Capital IPPS

## A. General Considerations

Fiscal year (FY) 2001 was the last year of the 10-year transition period established to phase in the PPS for hospital capital-related costs. During the transition period, hospitals were paid under one of two payment methodologies: fully prospective or hold harmless. Under the fully prospective methodology, hospitals were paid a blend of the capital Federal rate and their hospitalspecific rate (see §412.340). Under the holdharmless methodology, unless a hospital elected payment based on 100 percent of the capital Federal rate, hospitals were paid 85 percent of reasonable costs for old capital costs (100 percent for SCHs) plus an amount for new capital costs based on a proportion of the capital Federal rate (see § 412.344). As we state in section V. of the preamble of this final rule with comment period, with the 10year transition period ending with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002), beginning in FY 2002 capital prospective payment system payments for most hospitals are based solely on the capital Federal rate. Therefore, we no longer include information on obligated capital costs or projections of old capital costs and new capital costs, which were factors needed to calculate payments during the transition period, for our impact analysis.

In accordance with $\S 412.312$, the basic methodology for determining a capital PPS payment includes a large urban add-on adjustment. However, as discussed above and in section V. of the preamble of this final rule with comment period, we are eliminating the large urban add-on adjustment to capital IPPS payments in FY 2008. The basic methodology for calculating capital IPPS payments in FY 2008 is as follows: (Standard Federal Rate $) \times($ DRG weight $) \times($ GAF $) \times$ (COLA for hospitals located in Alaska and Hawaii) $\times(1+$ Disproportionate Share Adjustment Factor + IME Adjustment Factor, if applicable).

In addition, hospitals may also receive outlier payments for those cases that qualify under the threshold established for each fiscal year.

The data used in developing the impact analysis presented below are taken from the

March 2007 update of the FY 2006 MedPAR file and the March 2007 update of the Provider-Specific File that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2007 update of the most recently available hospital cost report data (FYs 2004 and 2005) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described below. In addition, as discussed in section III. of the Addendum to this final rule with comment period, we are adjusting the capital rates to account for improvements in documentation and coding under the MS-DRGs in FY 2008.
Furthermore, due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the March 2007 update of the FY 2006 MedPAR file, we simulated payments under the capital PPS for FY 2007 and FY 2008 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (Indian Health Service hospitals and hospitals in Maryland) are excluded from the simulations.
As we explain in section III.A. of the Addendum to this final rule with comment period, payments are no longer made under the regular exceptions provision under $\S \S 412.348(\mathrm{~b})$ through (e). Therefore, we no longer use the actuarial capital cost model (described in Appendix B of the August 1, 2001 proposed rule ( 66 FR 40099)). We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital's case mix. We then added estimated payments for indirect medical education, disproportionate share, large urban add-on, and outliers, if applicable. (We note that, consistent with the elimination of the large urban add-on beginning in FY 2008, discussed in section V.B. of the preamble of this final rule with comment period, such estimated payments under this policy are only reflected in the payments we modeled for FY 2007 and were not included in the payments we modeled for FY 2008.) For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case mix index will increase by 1.0 percent in both FYs 2007 and 2008. (We note that this does not reflect the adjustment to the capital rates to account for assumed growth in case mix due to improvement in documentation and coding under the MS-DRGs, as discussed in section III. of the Addendum of this final rule with comment period.)
- We estimate that the Medicare discharges will be 13.1 million in FY 2007
and 13.4 million in FY 2008 for an estimated 2.3 percent increase from FY 2007 to FY 2008.
- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section V. of the preamble and section III.A. of the Addendum to this final rule with comment period, the FY 2008 update for all hospitals is 0.9 percent.
- In addition to the FY 2008 update factors, the FY 2008 capital Federal rate for both urban and rural hospitals was calculated based on a GAF/DRG budget neutrality factor of 0.9997 , an outlier adjustment factor of 0.9517 , and an exceptions adjustment factor of 0.9997 .
- For FY 2008, as discussed in section V. of the preamble and section III.A. of the Addendum to this final rule with comment period, the FY 2008 capital rates for all hospitals was further adjusted by a factor of 0.988 (or 1.2 percent) to maintain budget neutrality for the implementation of the MSDRGs by eliminating the effect of changes in coding or classification of discharges that do not reflect real case-mix changes.

## B. Results

We used the actuarial model described above to estimate the potential impact of our changes for FY 2008 on total capital payments per case, using a universe of 3,534 hospitals. As described above, the individual hospital payment parameters are taken from the best available data, including the March 2007 update of the FY 2006 MedPAR file, the March 2007 update to the PSF, and the most recent cost report data from the March 2007 update of HCRIS. In Table III, we present a comparison of total payments per case for FY 2007 compared to FY 2008 based on the FY 2008 payment policies. Column 2 shows estimates of payments per case under our model for FY 2007. Column 3 shows estimates of payments per case under our model for FY 2008. Column 4 shows the total percentage change in payments from FY 2007 to FY 2008. The change represented in Column 4 includes the 0.9 percent update to the capital Federal rate for all hospitals, a 1.0 percent increase in case mix, changes in the adjustments to the capital Federal rate (for example, the effect of the hospital wage index on the GAF), reclassifications by the MGCRB, and the additional 1.2 percent reduction to all of the rates to account for improvements in documentation and coding or other changes in coding that do not reflect real changes in case mix for implementation of the MS-DRGs. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.
The simulation results show that, on average, capital payments per case can be
expected to increase 0.6 percent in FY 2008. In addition to the 0.9 percent update to the capital Federal rate, this projected increase in capital payments per case can be attributed to the implementation of the MS-DRGs, including the transition relative weights, as discussed in sections II.B. through E. of the preamble of this final rule with comment period.

The results of our comparisons by geographic location and by region are consistent with the results we expected after eliminating the large urban add-on adjustment. The geographic comparison shows that all urban hospitals are expected to experience a 0.6 percent increase in capital IPPS payments per case, while large urban areas are expected to experience no change in capital IPPS payments per case. Capital IPPS payments per case for rural hospitals are expected to increase 0.3 percent. The difference is mostly due to the MS-DRGs. Specifically, based on existing hospital claims data, under the MS-DRGs, the better recognition of severity of illness is expected to increase payments to urban hospitals that treat a more acutely ill mix of patients. Similarly, however, the improved recognition of severity of illness will decrease payments to rural hospitals because they are treating less severely ill patients. Therefore, we project a lower increase in estimated payments for rural hospitals due to the DRG changes as compared to urban hospitals. In addition to the effect of the DRG changes, the capital impact is also somewhat affected by the wage-index changes because the GAF values are derived from the wage index. Furthermore, the outlier threshold also affects payments. Because the FY 2008 outlier threshold is lower than the FY 2007 outlier threshold, payments will increase, further explaining why, after eliminating the large urban add-on adjustment of 3.0 percent, we estimate no change in payments from FY 2007 to FY 2008 for large urban hospitals. For rural hospitals, another factor contributing to the smaller increase in payments for rural hospitals is the expiration of the 3-year hold harmless provision for urban hospitals that were converted to rural under the CBSAs in FY 2005. The policy allowed urban hospitals under the old labor market area designations that became rural under the CBSAs to receive payment using the wage index of the MSA where they were previously classified as urban for 3 years: FY 2005 through FY 2007. Beginning in FY 2008, these rural hospitals will receive the wage index for the area that they are currently located in. As a result, rural hospitals will experience a smaller increase in payments than urban hospitals because of the addition of these formerly urban hospitals.

More than half of all regions are estimated to experience an increase in total capital payments per case from FY 2007 to FY 2008.

These increases vary by region and range from a 2.4 percent increase in the Pacific rural region to a 0.3 percent increase in the East North Central urban region, the Middle Atlantic rural region, and Puerto Rico. Two urban regions are projected to experience a decrease in capital payments with the difference mostly due to changes in the GAF and the elimination of the large urban add on adjustment: -0.6 percent in the Middle Atlantic urban region and -0.2 percent in the New England urban region. In the rural regions experiencing a decrease in total capital payments per case, the range is from a 0.8 percent decrease in the West South Central rural region to a 0.1 percent decrease in the East North Central rural region. For most of the rural regions projected to experience a decrease in capital payments, it is mostly due to changes in the GAF, as well as changes due to the adoption of the MSDRGs. The change in payments per case for all hospitals is 0.6 percent.

By type of ownership, voluntary hospitals are estimated to experience an increase of 0.3 percent in capital payments per case, while both proprietary and government hospitals are estimated to experience a 1.2 percent increases in payments. Voluntary hospitals are projected to have a slightly smaller increase in capital payments than government and proprietary hospitals, mostly due to the elimination of the large urban addon adjustment and changes in the GAF.
Section 1886(d)(10) of the Act established the MGCRB. Before FY 2005, hospitals could apply to the MGCRB for reclassification for purposes of the standardized amount, wage index, or both. Section 401(c) of Pub. L. 108173 equalized the standardized amounts under the operating IPPS. Therefore, beginning in FY 2005, there is no longer reclassification for the purposes of the standardized amounts; however, hospitals still may apply for reclassification for purposes of the wage index for FY 2008. Reclassification for wage index purposes also affects the GAF because that factor is constructed from the hospital wage index.
To present the effects of the hospitals being reclassified for FY 2008, we show the average payments per case for reclassified hospitals for FY 2007. Rural nonreclassified hospitals are expected to have the largest decrease in payments of 0.4 percent, as compared to the 0.1 percent decrease for the other reclassified hospitals for FY 2008. This difference is mostly due to changes in the GAF. All urban nonreclassified hospitals and all rural reclassified hospitals are expected to experience an increase in payments of 0.7 percent, while all urban reclassified hospitals are expected to experience a 0.5 percent increase in capital payments per case. This difference is mostly due to the elimination of the large urban add-on as well as changes in the GAF.

## Table III.-Comparison of Total Payments per Case <br> [FY 2007 Payments Compared To FY 2008 Payments]

# Table III.-Comparison of Total Payments per Case-Continued <br> [FY 2007 Payments Compared To FY 2008 Payments] 

## IX. Alternatives Considered

This final rule with comment period contains a range of policies. The preamble of this final rule with comment period provides descriptions of the statutory provisions that are addressed, identifies those policies when discretion has been exercised, presents rationale for our decisions and, where relevant, alternatives that were considered.

## X. Overall Conclusion

The changes we are making in this final rule with comment period will affect all classes of hospitals. Some hospitals are expected to experience significant gains and others less significant gains, but overall hospitals are projected to experience positive updates in IPPS payments in FY 2008. Table I of section VI. of this Appendix demonstrates the estimated distributional impact of the IPPS budget neutrality requirements for DRG and wage index changes, and for the wage index reclassifications under the MGCRB. Table I also shows an overall increase of 3.5 percent in operating payments, an estimated increase of $\$ 3.56$ billion, which includes hospital reporting of quality data program costs (\$1.89 million) and all operating payment policies as described in section VI. of this Appendix. Capital payments are estimated to increase by 0.6 percent per case, as shown in Table III of section VIII. of this Appendix. Therefore, we project that capital payments will increase by $\$ 282$ million in FY 2008 compared to FY 2007. The operating and capital payments should result in a net increase of $\$ 3.837$ billion to IPPS providers. The discussions presented in the previous pages, in combination with the rest of this final rule with comment period, constitute a regulatory impact analysis.

## XI. Accounting Statement

As required by OMB Circular A-4 (available at http://www.whitehousegov/omb/ circulars/a004/a-4.pdf), in Table IV below, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule with comment period. This
table provides our best estimate of the increase in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule with comment period. All expenditures are classified as transfers to Medicare providers.

## Table IV.-Accounting Statement: Classification of Estimated ExPENDITURES FROM FY 2007 TO FY 2008

| Category | Transfers |
| :---: | :---: |
| Annualized Monetized <br> Transfers. <br> From Whom to Whom | $\$ 3.837$ Billion. <br> Federal Government <br> to IPPS Medicare <br> Providers. |
| Total .......................... | $\$ 3.837$ Billion. |

## XII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Office of Management and Budget reviewed this final rule with comment period.

## Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

## I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of the MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5)(B) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules, respectively. Accordingly, we are publishing our final recommendations for the update factors for the IPPS standardized amount, the hospitalspecific rates for SCHs and MDHs, and the rate-of-increase limits for hospitals and
hospital units excluded from the IPPS, as well as LTCHS, IPFs, and IRFs. We also discuss our response to MedPAC's recommended update factors for inpatient hospital services.

## II. Inpatient Hospital Update for FY 2008

Section 1886(b)(3)(B)(i)(XX) of the Act, as amended by section 5001(a) of Pub. L. 109171, sets the FY 2008 percentage increase in the operating cost standardized amount equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to the hospital submitting quality information under rules established by the Secretary in accordance with
1886(b)(3)(B)(viii) of the Act. For hospitals that do not provide these data, the update is equal to the market basket percentage increase less 2.0 percentage points. Consistent with current law, based on Global Insight, Inc.'s second quarter 2007 forecast of the FY 2008 market basket increase, the FY 2008 update to the standardized amount will be 3.3 percent (that is, the current estimate of the market basket rate-of-increase) for hospitals in all areas, provided the hospital submits quality data in accordance with our rules. For hospitals that do not submit quality data, the update to the standardized amount will be 1.3 percent (that is, the current estimate of the market basket rate-ofincrease minus 2.0 percentage points).

Section 1886(b)(3)(B)(iv) of the Act sets the FY 2008 percentage increase in the hospitalspecific rates applicable to SCHs and MDHs equal to the rate set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Therefore, the update to the hospital-specific rates applicable to SCHs and MDHs will be 3.3 or 1.3 percent depending upon whether the hospital submits quality data.

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's and cancer hospitals. Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage
increase. In accordance with §403.752(a) of the regulations, RNHCIs are paid under § 413.40 , which also uses section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits. Section $1886(\mathrm{j})(3)(\mathrm{C})$ of the Act addresses the increase factor for the Federal prospective payment rate of IRFs. Section 123 of Pub. L. 106-113, as amended by section 307(b) of Pub. L. 106-554, provides the statutory authority for updating payment rates under the LTCH PPS. As discussed below, for cost reporting periods beginning on or after October 1, 2006, LTCHs that are not defined as new under $\S 412.23(\mathrm{e})(4)$, and that had not elected to be paid under 100 percent of the Federal rate are paid 100 percent of the adjusted Federal PPS rate. Therefore, because no portion of LTCHs' prospective payments will be based on reasonable cost concepts for cost reporting periods beginning on or after October 1, 2006, we are not establishing a rate-ofincrease percentage for FY 2008 for LTCHs to be used under $\S 413.40$. In addition, section 124 of Pub. L. 106-113 provides the statutory authority for updating all aspects of the payment rates for IPFs. Under this broad authority, IPFs that are not defined as new under $\S 412.426$ (c) will be paid under a blend methodology for cost reporting periods beginning on or after January 1, 2005, and before January 1, 2008. The methodology blends the estimated Federal per diem payment amount and a facility-specific payment amount. The portion of the IPF PPS payment that is based on reasonable cost principles is updated in accordance with 42 CFR Part 413, which uses section 1886(b)(3)(B)(ii) of the Act to determine the percentage increase in the rate-of-increase limits. For the reasonable cost-based portion of an IPF's PPS blended payments, we are providing our current estimate of the excluded hospital market basket increase (3.3 percent) to update the target amounts. New IPFs are paid based on 100 percent of the Federal per diem payment amount.
Currently, children's hospitals, cancer hospitals, and RNHCIs are the remaining three types of hospitals still reimbursed under the reasonable cost methodology. We are providing our current estimate of the FY 2008 IPPS operating market basket percentage increase ( 3.3 percent) to update the target limits for children's hospitals, cancer hospitals, and RNHCIs.

Effective for cost reporting periods beginning on or after October 1, 2002, LTCHs have been paid under the LTCH PPS, which was implemented with a 5-year transition period for LTCHs not defined as new under $\S 412.23(\mathrm{e})(4)$ (hereafter referred to as "existing"). (See 67 FR 55954.) An existing LTCH could have elected to be paid at 100 percent of the adjusted Federal prospective rate at the start of any of its cost reporting periods during the transition period. During this transition period, if an existing LTCH did not elect to be paid at 100 percent of the adjusted Federal prospective payment rate, it received a PPS payment that consisted of a blend of its reasonable cost-based payment and the Federal prospective payment rate. For cost reporting periods beginning on or after October 1, 2006, no portion of a LTCH's

PPS payments can be based on reasonable cost concepts. Consequently, there is no need to update the target limit under § 413.40 effective October 1, 2007, for LTCHs.

In the RY 2008 LTCH PPS final rule ( 72 FR 26887 through 26890), we finalized an update of 0.71 percent (that is, the latest estimate of the market basket rate-of-increase of 3.2 percent minus an adjustment factor of 2.49 percentage points for case-mix growth due to improved coding) to the LTCH PPS Federal rate for RY 2008.

Effective for cost reporting periods beginning on or after January 1, 2005, IPFs are paid under the IPF PPS. IPF PPS payments are based on a Federal per diem rate that is derived from the sum of the average routine operating, ancillary, and capital costs for each patient day of psychiatric care in an IPF, adjusted for budget neutrality. For cost reporting periods beginning on or after January 1, 2005, and before January 1, 2008, existing IPFs (those not defined as "new"' under § 412.426(c)) are paid based on a blend of the reasonable cost based PPS payments and the Federal per diem base rate. For cost reporting periods beginning on or after January 1, 2008, existing IPFs will be paid based on 100 percent of the Federal per diem rate. For purposes of the update factor for FY 2008, the portion of the IPF PPS transitional blend payment based on reasonable costs will be determined by updating the IPF's TEFRA limit by the current estimate of the excluded hospital market basket, which is estimated to be 3.3 percent. The update factor of 3.2 percent to the Federal per diem rate for July 1, 2007 through June 30, 2008, based on Global Insight, Inc.'s first quarter 2007 forecast of the RPL market basket increase, was provided in the rate year (RY) 2008 IPF PPS update notice (72 FR 25608).

IRFs are paid under the IRF PPS for cost reporting periods beginning on or after January 1, 2002. For cost reporting periods beginning on or after October 1, 2002 (FY 2003), and thereafter, the Federal prospective payments to IRFs are based on 100 percent of the adjusted Federal IRF prospective payment amount, updated annually ( 69 FR 45721). Under section 1886(j)(3)(C) of the Act, the FY 2008 IRF PPS update will equal 3.2 percent based on Global Insight, Inc.'s second quarter 2007 forecast of the RPL market basket increase with historical data through the first quarter of 2007.

## III. Secretary's Final Recommendation

MedPAC is recommending an inpatient hospital update equal to the market basket rate of increase for FY 2008. MedPAC's rationale for this update recommendation is described in more detail below. Using the 2007 second quarter forecast from Global Insight, Inc. of the FY 2008 market basket increase and an adjustment factor based on the FY 2008 President's Budget, we are recommending an update to the standardized amount of 2.65 percent (that is, the market basket rate-of-increase of 3.3 percent minus an adjustment factor of 0.65 percentage points). We are recommending that this same update factor apply to SCHs and MDHs.Our rationale for this recommended update is described below.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(e)(4)(A) of the Act, we are also recommending update factors for all other types of hospitals. Consistent with the President's Budget, we are recommending an update based on the IPPS market basket increase for children's hospitals, cancer hospitals, and RNHCIs of 3.3 percent, based on Global Insight, Inc.'s 2007 second quarter forecast of the IPPS operating market basket increase. For IPFs that are currently paid on a PPS blended payment basis, a portion of which is based on reasonable cost-principles and Federal prospective payment amounts, we are recommending an update factor of 3.3 percent for the portion of the payment that is based on reasonable costs. Consistent with the President's Budget, based on Global Insight, Inc.'s first quarter 2007 forecast of the RPL market basket increase, we are recommending an update equal to the market basket increase of 3.2 percent for the Federal per diem payment amount.

In the RY 2008 LTCH PPS final rule (72 FR 26887 through 26890), we implemented, and in this final rule with comment period recommend, an update of 0.71 percent (that is, the most recent estimate of the market basket rate-of-increase of 3.2 percent minus an adjustment factor of 2.49 percentage points for case-mix growth due to improved coding) to the Federal rate for RY 2008. Finally, consistent with the President's FY 2008 Budget, we are recommending that the Federal rate to the IRF PPS remain unchanged for FY 2008.

For fiscal years prior to FY 2008, section 1886(e)(3) of the Act directed the Secretary to report to the Congress an initial estimate of his recommendation of an appropriate payment inflation update for inpatient hospital services for the upcoming fiscal year not later than March 1. Section 1886(d)(4)(C) of the Act further required the Secretary to include recommendations with respect to adjustments to the DRG weighting factors in the March 1 Report to Congress. In addition, sections 1886(e)(4)(A) and (e)(5)(B) of the Act require that the Secretary recommend update factors in each of the IPPS proposed and final rules, taking into account MedPAC's recommendation. Thus, the statute required the Secretary to make update recommendations in both a March 1 Report to Congress, and later in the IPPS proposed and final rules. Historically, the only difference between the recommendation we provided in the March 1 Report to Congress and the IPPS proposed rule was the use of a later estimate of the market basket increase for the proposed rule. Section 106(c) of MIEA-TRHCA eliminated the requirement to make the Report to Congress recommending an update and adjustments to DRG weighting factors by March 1. In accordance with section 106(c) of MIEA-TRHCA, we are making the Secretary's only recommendation for an update factor in the IPPS rules.

## IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2007 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship
between payments and an appropriate cost base, utilizing an established methodology used by MedPAC in the past several years.

MedPAC recommended an update to the hospital inpatient rates equal to the increase in the hospital market basket in FY 2008, concurrent with implementation of a quality incentive payment program. MedPAC also recommended that CMS put pressure on hospitals to control their costs rather than accommodate the current rate of cost growth.

MedPAC noted that, notwithstanding negative overall Medicare margins, most of the indicators of Medicare payment adequacy to hospitals are positive, including beneficiaries' access to care, increased access to capital, and service volume increases. MedPAC also noted that this
recommendation "should have no impact on beneficiary access to care and is not expected to affect providers' willingness and ability to provide care to Medicare beneficiaries."

Response: We agree with MedPAC that hospitals should control costs rather than accommodate the current rate of growth. An update equal to less than the market basket will pressure hospitals to control their costs, consistent with MedPAC's recommendation. As MedPAC noted, rising hospital costs are resulting in margins for some hospitals that are below zero. As discussed in section II. of the preamble of this final rule with comment period, CMS is refining the DRGs to better account for severity illness and is basing the DRG weights on cost rather than charges. We believe that these refinements will better
match Medicare payments to the cost of care and provide incentives for hospitals to be more efficient in controlling costs. For these reasons, we are recommending an inpatient hospital update equal to the market basket increase minus an adjustment factor of 0.65 percentage points for hospitals paid under the IPPS for FY 2008.
We note that, because the operating and capital prospective payment systems remain separate, we are continuing to use separate updates for operating and capital payments. The update to the capital payment rate is discussed in section III. of the Addendum to this final rule with comment period.

[^17]:    ${ }^{25}$ See the FY 1989 final rule (53 FR 38485, September 30, 1988), for the revision made for the discharges occurring in FY 1989; the FY 1990 final rule (54 FR 36552, September 1, 1989), for the FY 1990 revision; the FY 1991 final rule ( 55 FR 36126, September 4, 1990), for the FY 1991 revision; the FY 1992 final rule (56 FR 43209, August 30, 1991) for the FY 1992 revision; the FY 1993 final rule ( 57 FR 39753, September 1, 1992), for the FY 1993 revision; the FY 1994 final rule ( 58 FR 46278, September 1, 1993), for the FY 1994 revisions; the FY 1995 final rule (59 FR 45334, September 1, 1994), for the FY 1995 revisions; the FY 1996 final rule ( 60 FR 45782, September 1, 1995), for the FY 1996 revisions; the FY 1997 final rule ( 61 FR 46171, August 30, 1996), for the FY 1997 revisions; the FY 1998 final rule (62 FR 45966, August 29, 1997) for the FY 1998 revisions; the FY 1999 final rule (63 FR 40954, July 31, 1998), for the FY 1999 revisions; the FY 2001 final rule ( 65 FR 47064, August 1, 2000), for the FY 2001 revisions; the FY 2002 final rule ( 66 FR 39851, August 1, 2001), for the FY 2002 revisions; the FY 2003 final rule ( 67 FR 49998, August 1, 2002), for the FY 2003 revisions; the FY 2004 final rule ( 68 FR 45364, August 1, 2003), for the FY 2004 revisions; the FY 2005 final rule ( 69 FR 49848, August 11, 2004), for the FY 2005 revisions; the FY 2006 final rule ( 70 FR 47640, August 12, 2005), for the FY 2006 revisions; and the FY 2007 final rule ( 71 FR 47870) for the FY 2007 revisions. In the FY 2000 final rule ( 64 FR 41490, July 30, 1999, we did not modify the CC Exclusions List because we did not make any changes to the ICD-9-CM codes for FY 2000.

[^18]:    ${ }^{26}$ The original list of the ICD-9-CM procedure codes for the procedures we consider nonextensive procedures, if performed with an unrelated principal diagnosis, was published in Table 6C in section IV. of the Addendum to the FY 1989 final rule (53 FR 38591). As part of the FY 1991 final rule ( 55 FR 36135), the FY 1992 final rule (56 FR 43212), the FY 1993 final rule (57 FR 23625), the FY 1994 final rule (58 FR 46279), the FY 1995 final rule (59 FR 45336), the FY 1996 final rule ( 60 FR 45783), the FY 1997 final rule (61 FR 46173), and the FY 1998 final rule ( 62 FR 45981), we moved several other procedures from DRG 468 to DRG 477, and some procedures from DRG 477 to DRG 468. No procedures were moved in FY 1999, as noted in the final rule ( 63 FR 40962); in FY 2000 ( 64 FR 41496); in FY 2001 ( 65 FR 47064); or in FY 2002 ( 66 FR 39852). In the FY 2003 final rule ( 67 FR 49999) we did not move any procedures from DRG 477. However, we did move procedure codes from DRG 468 and placed them in more clinically coherent DRGs. In the FY 2004 final rule ( 68 FR 45365), we moved several procedures from DRG 468 to DRGs 476 and 477 because the procedures are

[^19]:    *One of the original 303 low-volume MS LTC-DRGs initially assigned to this low-volume quintile; removed from this low-volume quintile in addressing nonmonotonicity (see step 6 in section II.I.4.below).
    ${ }^{* *}$ One of the original 303 low-volume MS LTC-DRGs initially assigned to a different low-volume quintile but moved to this low-volume quintile in addressing nonmonotonicity (see step 6 in section II.I. 4 below).
    ${ }^{* * *}$ One of the original 303 low-volume MS LTC-DRGs initially assigned to this low-volume quintile but moved to a different low-volume quintile in addressing nonmonotonicity (see step 6 in section II.I. 4 below).

[^20]:    ${ }^{27}$ The BBA was enacted on August 5, 1997, and required application of the rural floor beginning with the FY 1998 IPPS. See the following for a description and calculation of the IPPS
    standardized amounts since that time: 62 FR 46038-46043, August 29, 1997; 63 FR 41006-41010, July 31, 1998; 64 FR 41544-41549, July 30, 1999; 65 FR 47111-47116, August 1, 2000; 66 FR 3993939946, August 1, 2001; 67 FR 50120-50126, August 1, 2002; 68 FR 45474-45480, August 1, 2003; 69-FR-49273-49282, August 11, 2004; 70 FR 4749147498, August 12, 2005; 71 FR 59889-58980, October 11, 2006

[^22]:    ${ }^{29}$ These figures represent 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals.

[^23]:    1 Factors effective for the first half of FY 2001 (October 2000 through March 2001).
    2 Factors effective for the second half of FY 2001 (April 2001 through September 2001). ${ }^{3}$ Incremental factors are applied to FY 2000 cumulative factors.

    5 Factors effective for the first half of FY 2003 (October 2002 through March 2003).
    6 Factors effective for the second half of FY 2003 (April 2003 through September 2003).
    7 Incremental factors are applied to FY 2002 cumulative factors.
    8 Factors effective for the first half of FY 2004 (October 2003 throug
    8 Factors effective for the first half of FY 2004 (October 2003 through March 2004).
    Incremental factors are applied to the cumulative factors for the second half of FY 2003.
    10 Factors effective for the second half of FY 2004 (April 2004 through September 2004).
    11 Factors effective for the first quarter of FY 2005 (September 2004 through December 2004).
    2004) of FY 2004.

    14 Incremental factors are applied to average of the cumulative factors for 2005.

[^24]:    ${ }^{1}$ The update factor and the GAF/DRG budget neutrality factors are built permanently into the capital rates. Thus, for example, the incremental change from FY 2007 to FY 2008 resulting from the application of the 0.9997 GAF/DRG budget neutrality factor for FY 2008 is 0.9997 .
    ${ }^{2}$ The outlier reduction factor and the exceptions adjustment factor are not built permanently into the capital rates; that is, these factors are not applied cumulatively in determining the capital rates. Thus, for example, the net change resulting from the application of the FY 2008 outlier adjustment factor is $0.9517 / 0.9568$, or 0.9947 .
    ${ }^{3}$ Adjustment to FY 2008 IPPS rates to account for upcoding expected to result from the adoption of the MS-DRGs, as discussed above in section III. of the Addendum to this final rule with comment period.
    ${ }^{4}$ Factors for FY 2008, as discussed above in section III. of the Addendum to this final rule with comment period.
    ${ }^{5}$ Percent change of individual factors may not sum due to rounding.

[^25]:    ${ }^{1}$ Based on salaries adjusted for occupational mix, according to the calculation in section II.D. 6 to this final rule.
    ${ }^{2}$ The case-mix index is based on the billed DRGs in the FY 2006 MedPAR file. It is not transfer adjusted.
    *Denotes wage data not available for the provider for that year.
    ". Based on the sum of the salaries and hours computed for Federal FYs 2006, 2007, and 2008.
    *" Denotes MedPAR data not available for the provider for FY 2006.
    ${ }^{3}$ This provider, 140B10, is part of a multi-campus provider, 140010, that is comprised of campuses that are located in two different CBSAs. For the FY 2008 wage index, a new provider record was created, designated with a " B " in the 4 th position of the provider number, to distinguish between the portion of the wages and hours of the multi-campus facility that is being allocated between the two different CBSAs. Please refer to the FY 2008 final rule, section III.H.I. 7 "Geographic Reclassification for Multi-campus Hospitals," for more details on this provision.
    ${ }^{4}$ This provider, 220B74, is part of a multi-campus provider, 220074, that is comprised of campuses that are located in two different CBSAs. For the FY 2008 wage index, a new provider record was created, designated with a " B " in the 4 th position of the provider number, to distinguish between the portion of the wages and hours of the multi-campus facility that is being allocated between the two different CBSAs. Please refer to

[^26]:    1 Large urban area.
    ${ }^{2}$ Hospitals geographically located in the area are assigned the statewide rural wage index for FY 2008. New Jersey floor is imputed as dis-

[^27]:    * These procedure codes were discussed at the March 22-23, 2007 ICD-9-CM Coordination and Maintenance Committee meeting and were not finalized in time to include in the proposed rule. They will be implemented on October 1, 2007.
