Table 1-6. Mean Age of Mother by Live-birth Order, According to Race and Hispanic Origin of Mother: United States, 1968-2003

(Live-birth order refers to number of children born alive to mother. Beginning in 1970, data excludes births to nonresidents of the United States; see "Technical Appendix.")

<sup>(1)</sup> Based on 100 percent of births in selected states and on 50-percent sample of births in all other states; see "Technical Appendix."

- (2) Based on 50-percent sample of births.
- (3) Based on data for 49 states and the District of Columbia which reported Hispanic origin on the birth certificate.
- (4) Based on data for 48 states and the District of Columbia which reported Hispanic origin on the birth certificate.
- (5) Based on data for 47 states and the District of Columbia which reported Hispanic origin on the birth certificate.
- (6) Persons of Hispanic origin may be of any race.

NOTES: The median age in table 1-5 is the value that divides the birth rate distributions into two equal parts, one-half of the values being less and one-half being greater. It is computed from birth rates in 5-year age groups which eliminates the effects of changes in the age composition of the childbearing population over time. The mean age in table 1-6 is the numeric average. Thus, due to the different ways in which the median and mean ages are computed as well as the adjustment of the median, the numbers in tables 1-5 and 1-6 would be expected to differ. Race and Hispanic origin are reported separately on birth certificates. Race categories are consistent with the 1977 Office of Management and Budget standards. Six states reported multiple-race data in 2003. The multiple-race data for these states were bridged to the single-race categories of the 1977 Office of Management and Budget standards for comparability with other states; see "Technical Appendix." In this table all women (including Hispanic women) are classified only according to their race; See "Technical Appendix."
