2000 HAWAII REPORTED INJURIES AND ILLNESSES

In 2000, reported cases increased by 1,527 or approximately 5% to 31,836. This was the first increase of reported cases after eight consecutive decreases. One reason for the increase could be due to an increase in construction employment where more work hazards exist.

Although reported cases increased in every industry for 2000, only construction and finance, insurance and real estate increased in frequency. Statistics show that construction changed from 1 in every 10 workers reporting an injury or illness to 1 in 9 workers. Finance, insurance and real estate reported 1 in 25 workers injured in 2000 compared to 1 in 28 workers in 1999.

Back injuries accounted for 25.4 percent of the total cost in 2000. Sprains and strains with \$29.9 million or 50.8 percent of total was the dominant cost of back cases. The second highest nature of injury was back pain with \$18.0 million of cost or 30.6 percent of total cost.

The cost per case for open wounds increased from \$1,400 in 1999 to \$30,983 in 2000. This increase was due to one serious wound case, which made up most of the cost for 2000. Excluding wounds, dislocations of the back had the highest cost per case at \$17,780 in 2000.

TECHNICAL NOTES

The Workers' Compensation Data Book is based on the annual accumulation of data in the State of Hawaii, Disability Compensation data base.

1. The following coding systems and locally revised versions were used to categorize data:
 - a) Industrial attachment is determined by the principal activity of the employer as defined in the **1987 Standard Industrial Classification Manual**. This manual is published by the Office of Management and Budget, Washington, D.C., U.S. Government Printing Office. Each subsidiary of a multi-industry establishment has been assigned its own industrial classification.
 - b) Codes and definitions used to categorize Nature of Injury or Illness, Part of Body Affected, Source of Injury or Illness, and Event or Exposure were modeled after the **1992 Bureau of Labor Statistics (BLS) Occupational Injury and Illness Classification Structures (OIICS)**. Starting with 1996 data, BLS OIICS data codes were locally modified to 2 digits instead of 4 digits, making the data less detailed.
 - c) Occupational groups are based on the **1990 Alphabetical Index of Industries and Occupations**, developed and published by the Bureau of the Census, Washington, D.C., U.S. Government Printing Office. Starting with 1996 data, the occupation classifications were locally modified, making the data less detailed.

2. From 1999, the employment data source used in the **Worker's Compensation Data Book** has been changed. Instead of the **Labor Force Data Book** employment we are using the **Employment and Payrolls in Hawaii** statistics. Employment data from the later publication may be more in line with workers covered under the Workers' Compensation program. Caution should be taken when reviewing the employment and frequency data for trend analysis prior to 1999.

3. From 2000, the table Decisions Issued and Number of Hearings (previously called Compensation Orders Issued and Number of Hearings) has changed to include Act 59 settlements and attorney fees. The combined category Permanent Partial & Disfigurement no longer exists. Figures are reported under the category with the highest severity. For example: a case with disability payments and disfigurement award would be counted in the disability category and not in disfigurement.
