n. The existing Hyrum City’s Hydropower Project was initially constructed in 1930-1931, after receiving an original license on November 27, 1929. The project has been licensed since that time with one amendment in 1977, and one renewal in 1981. The current license expires on April 30, 2008. The run-of-river, base-load plant operates on 85-cubic-foot-per-second of water diverted by a diversion dam located in Blacksmith Fork Canyon. The 3,419-foot-by-passed reach is not de-watered because the flows in the river exceeds the capacity of the plant, and during low flows, Hyrum City operates the plant at less than maximum flow to maintain a continuous flow throughout the river channel for aesthetic enjoyment in the city park that adjoins the powerhouse.

The project includes the following constructed facilities: (1) A 15-foot-high, 70-foot-long earth-fill concrete core embankment to the north, a 14-foot-high, 65-foot-long concrete spillway section, a 15-foot-high, 125-foot-long earth-fill concrete core embankment to the north which makes the total length of the dam approximately 260-foot-long; (2) a 16-foot-high, 8-foot-wide concrete intake structure with a 20-foot-high, 8-foot-wide trash rack and fish ladder; (3) a 60-inch-diameter concrete penstock inlet with head gate; (4) a 3,470-foot-long, 48-inch-diameter concrete penstock going into a 130-foot-long, 42-inch-diameter steel penstock; (5) a 37-acre-foot de-silting pond; (6) a 26-foot-wide, 39-foot-long, 20-foot-high brick powerhouse; (7) a 400-kilowatt Leffel horizontal shaft scroll case turbine; (8) a 100-foot, 2.4-kV underground transmission line; and (9) appurtenant facilities.

The average annual generation of the project is approximately 3,083,000 kilowatt-hours and there are no proposed changes to the facilities or the current mode of operation at this time.

What Information Is EPA Particularly Interested In?

You may find the following suggestions helpful for preparing your comments:
