SUPPLEMENTARY INFORMATION: Neuronal cell death has been associated with a variety of diseases and conditions, including Alzheimer's, AIDS-related dementia, Huntington's disease, and Parkinson's disease to name a few. Neuronal cell death has also been associated with developmental retardation and learning impairments that have lifelong effects on individuals diagnosed with these conditions.

This invention discloses pharmaceutical compositions and methods of using Activity Dependent Neurotrophic Factor I (ADNF I) complex polypeptides which have been shown to prevent neuronal cell death. ADNF polypeptides are secreted by astroglial cells in the presence of vasoactive intestinal peptide (VIP). These new ADNF I complex polypeptides are effective for reducing neuronal cell death, for reducing oxidative stress, for reducing condition(s) associated with fetal alcohol syndrome in a subject, for enhancing learning and memory, both
