

with a chemokine receptor ligand, chemokines and other chemoattractants that enables specific targeting and delivery to the Treg cells. This technology is advantageous over the more harmful antibodies and chemicals that are currently used for the systemic depletion of Treg cells. The current technology can be used therapeutically in a variety of ways. They can be used together with vaccines to increase efficacy of the vaccine for the treatment of cancer, and can be used to locally deplete Treg cells or other immunosuppressive cells to induce cytolytic cell responses at the tumor site or to eliminate chronic infectious diseases such as HIV and tuberculosis.

Applications:

1. New chemoattractant based toxins targeted towards Treg cells.
2. New chemoattractant based toxins targeted towards immunosuppressive NKT, and macrophages.
3. New chemoattractant based toxins targeted towards local depletion of hyperactivated CD4 T cells to treat autoimmune diseases.
4. Chemoattractant based toxins depleting Treg cells or other immunosuppressive cells causing enhanced vaccine immune responses.
5. Novel immunotherapy by increasing vaccine efficacy against cancer and infectious diseases.

Market:

1. 600,000 deaths from cancer related diseases estimated in 2006.
2. The technology platform involving novel chemo-attractant based toxins can be used to improve vaccine immune responses. The vaccine market is believed to reach \$10bn in 2006.
3. The technology platform has additional market in treating several other clinical problems such as autoimmune diseases.

Development Status: The technology is currently in the pre-clinical stage of development.
