

Mining

Plumas National Forest

Methods of gold mining range from panning, which causes a minimum impact on the land, to using heavy equipment, which may cause major land disturbance. Different laws and regulations apply depending on the particular mining method planned.

1. Which lands are available for mining?

Nearly all National Forest land is open and available for prospecting and mining; however, most areas along streams have already been “staked” with placer claims. It is difficult to locate areas that are not currently covered by a mining claim. If your primary interest is panning for gold, you must make arrangements with the mining claimant to work on their claim.

2. Which lands are closed to mining?

In addition to valid mining claims, some areas have been withdrawn from mineral entry to protect resource values. Those areas withdrawn from mineral entry are not open to mining, prospecting or mineral removal. For example: The Wild Zone of the Middle Fork Feather River and the Lakes Basin Recreation Area are closed to mining. There are also certain lands where the United States, such as those acquired under the Wild and Scenic River Act, are not open to mining

Contact the local Ranger District to determine if mining is allowed on specific lands you are interested in.

There is also a significant amount of private land within the Plumas National Forest. Permission of the landowner is required for any use of private land. It is your responsibility to know if you are on private or National Forest land.

3. How can I learn where claims are located?

The County Assessor’s Office is the best source of information on who has filed where. They have locations of all mining claims currently being assessed. Also, the Bureau of Land Management’s Sacramento Office has developed a computerized file of mining claims within the United States. BLM’s website is: www.geocommunicator.gov. Their telephone number is (916) 978-4400.

4. What rules apply to suction dredges?

Dredges and other motorized equipment are prohibited in the Wild Zone of the Middle Fork of the Feather River. The Wild Zone extends from the confluence of Nelson Creek to Lake Oroville with the exception of a short segment at Milsap Bar.

Dredging in Yuba County is allowed all year. However, the main stem of Canyon Creek (Yuba County) from its mouth upstream to Sierra-Yuba County line (T20N, R8E, S25) is open the fourth Saturday in May through October 15.

Lassen, Plumas and Sierra Counties are also open from the fourth Saturday in May through October 15 for dredging.

A permit to operate a vacuum or suction dredge must be obtained from the California Department of Fish and Game. Normally a Standard Permit is issued for dredges up to 6 inches intake diameter. In certain rivers on the Plumas National Forest an 8 inch dredge can be used under the Standard Permit. A special permit is required for larger dredges. Permit applications may be obtained from the California Department of Fish and Game, 3211 S Street, Sacramento, CA 95816, telephone number (916) 227-2244.

Revised 04/05/06

Some streams have special regulations regarding the size of dredges allowed. Contact California Department of Fish and Game for more information, and a complete listing of dredging regulations.

5. What restrictions apply concerning placer and lode mining, and use of mechanized equipment? A Notice of Intent to operate must be submitted to the appropriate Ranger District prior to conducting any operations which might cause a significant disturbance of surface resources. Depending on the degree of disturbance, a Plan of Operations may be required. Buildings and roads may not be constructed without an approved Plan of Operation.

Gold panning is not considered to cause significant disturbance and does not require a Notice of Intent. It is always a good idea to check with the local Ranger District for any special rules or policies applicable in the area in which you plan to pan for gold

6. What other regulations apply? Camping is limited to 30 days on the Plumas National Forest unless you have written authorization from the Forest Service. A campfire permit is required prior to building any camp or cook fire. The fire site should be in a safe location and have all duff and vegetation removed for a five (5) foot radius.

Without written authorization, camping is limited to 30 days on the Plumas National Forest.

Campfire Permits are required prior to building a campfire.

Smoking is only allowed when in an area free of duff, grass and other burnable materials.

All internal combustion engines must be equipped with an approved spark arrester.

7. How can I obtain a map?
Additional fire restrictions may be imposed during critical fire danger periods. Keep informed of current regulations by contacting your local Ranger District.

All roads not physically blocked, signed, or gated are open to motor vehicles; however, some areas are closed to off-road vehicle travel.

A map of the Plumas National Forest is available by sending \$6.00 to any of the Forest Service offices listed below. You can also buy one in person at any of these offices.. The map is a 1/2" = 1 mile scale.

U.S. Geological survey quadrangle maps are available at many engineering, stationery, and sporting goods stores or at <http://store.usgs.gov> for \$6.00 each.
