^a Percent Positive

^b (Number Positive/Number Analyzed x 100) in 25 grams of tested product

^c This total does not include 5,198 product contact surface and environmental samples that were analyzed as part of the RLm program. This, the total number of *L. monocytogenes* analyses for CY2007, excluding all follow-up sampling and sampling of imported products, was 17,863.
