The development of this document, *Building Air Quality: A Guide for Building Owners and Facility Managers*, has been a joint undertaking of the Indoor Air Division in the Office of Atmospheric and Indoor Air Programs of the United States Environmental Protection Agency and the National Institute for Occupational Safety and Health. The document was prepared under the direction of Robert Axelrad, Director, EPA Indoor Air Division and Philip J. Bierbaum, Director, NIOSH Division of Physical Sciences and Engineering.

EPA and NIOSH appreciate the time that many organizations and individuals took to share ideas, discuss their own practical experiences, and review many drafts of this document. Many of the ideas raised by these reviewers have been incorporated into this document.

Two people had primary responsibility for developing the content and format of the document. Elizabeth Agle, the EPA project manager, developed the structure of the document, assembled the teams of contributors and reviewers, and provided direction and untiring support as the project came to fruition. Susan Galbraith, Cogito Technical Services, served as the principal writer. She brought to the task both considerable writing skills and a basic understanding of how buildings operate that proved invaluable throughout the process of conceptualizing and creating this document.

EPA and NIOSH gratefully acknowledge the important contribution of Terry Brennan, Camroden Associates; Ed Light, Pathway Diagnostics; and William A. Turner, The W.L. Turner Group, who

served as the team of core technical advisors for this document. These individuals contributed a substantial amount of written material and thoughtful comments on the many drafts and, most importantly, their considerable practical experience in identifying and resolving indoor air quality problems. Joseph Lstiburek, Building Science Corporation, contributed much of the material on the problem of moisture. EPA and NIOSH particularly wish to thank the staff of The Charles E. Smith Companies who reviewed numerous drafts of the document and made invaluable comments from a building management perspective.

The photographs were donated by: Terry Brennan, Camroden Associates; Michael Crandall, NIOSH; Ed Light, Pathway Diagnostics; Joseph Lstiburek, Building Science Corporation; Phil Morey, Clayton Environmental Services; Tedd Nathanson, Public Works Canada; Robert Olcerst, Brujos Scientific Inc.; Stan Salisbury, NIOSH; William A. Turner, The H.L. Turner Group; and Kenneth Wallingford, NIOSH. Additional slides came from the NIOSH Health Hazard Evaluation Program and from the Occupational Safety and Health Administration.

A large number of people within both EPA and NIOSH commented on the drafts of the document. EPA and NIOSH recognize the following staff for their particular contributions: John Girman, Elissa Feldman, Pauline Johnston, Sue Perlin, David Mudarri, Jack Primack, Bob Thompson, Kevin Teichman, Charles Truchillo, and Jim Wilson, EPA; and Michael Crandall, Jerome Flesh, Richard Gorman, Joseph Hurrell, Pantelis Rentos, and Mitchell Singal, NIOSH.

The draft document was widely circulated for review outside these agencies. EPA and NIOSH thank the following individuals who reviewed all or part of the document and submitted comments:

Rita Cohen, of ICF, Inc., assisted in the  
 project management for the development  
 of this document. Marie O'Neill, of The  
 Bruce Company, provided editorial and  
 coordination assistance. EPA and NIOSH  
 extend special thanks to Linda Berns,  
 Terry Savage, and others at the firm of  
 Berns & Kay, Ltd. for their effort and  
 enthusiasm in designing and producing the  
 document under tight deadlines.
