

## TECHNICAL DOCUMENTATION

### CHAPTER 1.

# Introduction

The American Travel Survey (ATS) on CD-ROM was developed by the Bureau of Transportation Statistics (BTS) to make ATS statistics accessible to a wide audience in a media compatible with personal computers. The ATS compiles national data on the nature and characteristics of long-distance personal travel.

The American Travel Survey contains information in several files on household trips and person trips reflecting a wide range of variables. The household trip data includes information about the traveling household's size, household and family income, household type, and number of vehicles. Information on person trips includes such variables as the traveler's race, origin, age, income category, and activity. Trip variables on both the household trip and person trip files include purpose of trip, mode of transportation, trip distance, number of household members on the trip, and a wide variety of related statistics. All of the data are presented in a manner that guarantees the confidentiality of the respondents.

The ATS on CD-ROM contains statistics from the 1995 survey in ASCII and SAS formats. The raw data may be accessed directly by users with their own data manipulation software or the SAS data sets may be accessed by licensed SAS users.

Data structures for each of these data sets are described in the documents contained in the “\docs” subdirectory of this CD-ROM.

#### **Technical Assistance**

For assistance using this CD-ROM or the databases, contact the Bureau of Transportation Statistics at (202) 366-9913 and refer to the 1995 American Travel Survey CD-ROM. Users with Internet access may contact us via e-mail at [ats@bts.gov](mailto:ats@bts.gov). For assistance with importing the data into a software package, please contact technical support for the specific vendor.

## TECHNICAL DOCUMENTATION

### CHAPTER 2.

# How to Use This File

This chapter serves as a guide for data users to both the CD-ROM and the technical documentation. Chapter 1 provides an introduction. Chapter 3 contains the data dictionary for the ASCII version of the microdata files and Chapter 4 contains the contents for the SAS version of the files.

#### **Record Layout and Data Dictionary**

The record layout, data dictionary, and/or contents (code book) describes the file and provides character locations for each variable. The components include a short mnemonic or variable name for use with software packages; begin and end position on the file; field size or variable length; and a description of the variable and the possible values for each variable. The dictionary is indexed by position and in alphabetical order.

There is also a machine readable data dictionary file on the CD-ROM. This dictionary is designed to be converted for use with various software packages. A user can produce hard copy documentation for extract files or labels for tabulations created; or can use the data dictionary file with software packages or user programs to automatically specify the layout of the microdata files.

#### **Appendices**

Detailed information on geographic areas is in appendix A followed by subject definitions in appendix B. Appendix C provides information about the sample design, estimation procedure and sources of sampling and non-sampling errors. Appendix D outlines the data collection and processing procedures. Facsimiles of the 1995 American Travel Survey questionnaire are in appendix E.

#### **Estimation and Expansion Factors (Weights)**

Estimation of trips may be made from tabulations of the microdata sample files by using the weights associated with that file; (e.g. for household trips, use the household trip weight and for person trips, use the person trip weight).

## TECHNICAL DOCUMENTATION

### CHAPTER 3.

# ASCII Record Layout and Data Dictionary

This chapter defines the record layout and data dictionary for the American Travel Survey (ATS) Public Use Microdata Files. The data are provided in two files; a Household Trip File (**hhtrip.dat**) and a Person Trip File (**pertrip.dat**). Each record in both files represents a household or person trip, respectively, and its associated geographic, socio-economic, and transportation-related characteristics.

Information related to these files is presented in several formats to facilitate easy access and use of the data. Following is an index to the basic data items organized according to the position of the variable within each file; an index of the variables organized alphabetically by variable description; and a detailed data dictionary for the Household Trip record and for the Person Trip record. The data dictionaries contain all applicable codes for every variable within each of the files.

#### Record Layout

##### INDEX TO HOUSEHOLD TRIP DATA ITEMS (BY POSITION)

Variable Mnemonic	Begin/End Position	Size	Description
FILEID	HT 1-2	2	File Identification
HHID	HT 3-8	6	Household Identification Number
TRIPID	HT 9-11	3	Trip Identification Number
TRIPS	HT 12-14	3	Trips
HHTRPWGT	HT 15-24	10	Household Trip Weight
OREGCODE	HT 25-25	1	Region Code of Trip Origin
OREGNAME	HT 26-34	9	Region Name of Trip Origin
ODIVCODE	HT 35-35	1	Division Code of Trip Origin
ODIVNAME	HT 36-53	18	Division Name of Trip Origin
OSTCODE	HT 54-55	2	State Code of Trip Origin
OSTNAME	HT 56-80	25	State Name of Trip Origin
OSTPOST	HT 81-82	2	State Postal Abbreviation of Trip Origin
OMETCODE	HT 83-86	4	Metropolitan Area (MA) Code of Trip Origin
OMETNAME	HT 87-136	50	Metropolitan Area (MA) Name of Trip Origin
DREGCODE	HT 137-137	1	Region Code of Trip Destination

Variable Mnemonic	Begin/End Position	Size	Description
DREGNAME	HT 138-146	9	Region Name of Trip Destination
DDIVCODE	HT 147-147	1	Division Code of Trip Destination
DDIVNAME	HT 148-165	18	Division Name of Trip Destination
DSTCODE	HT 166-168	3	State or Foreign Country Code of Trip Destination
DSTNAME	HT 169-218	50	State or Foreign Country Name of Trip Destination
DSTPOST	HT 219-220	2	State Postal Abbreviation of Trip Destination
DMETCODE	HT 221-224	4	Metropolitan Area (MA) Code of Trip Destination
DMETNAME	HT 225-274	50	Metropolitan Area (MA) Name of Trip Destination
TENURE	HT 275-275	1	Tenure
STRUCTUR	HT 276-276	1	Structure Type
VEHICLES	HT 277-278	2	Vehicles
VANS	HT 279-280	2	Vans
UTILITYV	HT 281-282	2	Utility Vehicles
PICKUPS	HT 283-284	2	Pickup Trucks
AUTOS	HT 285-286	2	Automobiles
TRUCKS	HT 287-288	2	Other trucks
RECVEHIC	HT 289-290	2	Recreational Vehicles
MOTORCYC	HT 291-292	2	Motorcycles
OTHERVEH	HT 293-294	2	Other Vehicles
HHTYPE	HT 295-296	2	Household Type
HHSIZE	HT 297-298	2	Household Size
HHPERSNS	HT 299-300	2	Persons in Household
HHINC	HT 301-302	2	Household Income
FAMINC	HT 303-304	2	Family Income
AGEHH1	HT 305-306	2	Age of Householder (Single-year increments)
AGEHH5	HT 307-308	2	Age of Householder (Five-year increments)
RACEHH	HT 309-309	1	Race of Householder
HISPHH	HT 310-310	1	Hispanic Origin of Householder
EDUCHH	HT 311-312	2	Educational Attainment of Householder
ACTIVHH	HT 313-313	1	Activity of Householder
TRPARTY	HT 314-315	2	Travelers in Travel Party
TRPRTYHH	HT 316-317	2	Household Members in Travel Party
TRPRTYAD	HT 318-319	2	Adult Household Members in the Travel Party
TRPRTYCH	HT 320-321	2	Children Under 18 Years in the Travel Party
TRPRTYNH	HT 322-323	2	Non-Household Members in the Travel Party

Variable Mnemonic	Begin/End Position	Size	Description
TRPRTYPE	HT 324-324	1	Travel Party Type
LVDATYR	HT 325-326	2	Departure Year
RTDATYR	HT 327-328	2	Return Year
RTQUARTR	HT 329-329	1	Return Quarter
WEEKEND	HT 330-330	1	Weekend Trip
NITEAWAY	HT 331-333	3	Nights Away from Home
NITEFRND	HT 334-336	3	Nights Away from Home in Friend's or Relative's Home
NITEHOTL	HT 337-339	3	Nights Away from Home in Hotel, Motel, Bed and Breakfast, or Resort
NITERENT	HT 340-342	3	Nights Away from Home in Rented Cabin, Condominium, or Vacation Home
NITEOWN	HT 343-345	3	Nights Away from Home in Owned Cabin, Condominium, Vacation Home, or Timeshare
NITETRAL	HT 346-348	3	Nights Away from Home in Camper, Trailer, or Recreational Vehicle
NITECORP	HT 349-351	3	Nights Away from Home in Corporate-Owned Housing
NITECONF	HT 352-354	3	Nights Away from Home in Conference Center
NITEMILT	HT 355-357	3	Nights Away from Home in Military Housing
NITEDORM	HT 358-360	3	Nights Away from Home in Dormitory
NITEPASS	HT 361-363	3	Nights Away from Home as Passenger in Car, Plane, Cruise Ship, Train, etc.
NITEPARK	HT 364-366	3	Nights Away from Home in Parked Automobile, Van, Station Wagon, etc.
NITESPA	HT 367- 369	3	Nights Away from Home in Health Spa or Health Resort
NITECAMP	HT 370- 372	3	Nights Away from Home in Work or Recreational Camp, Tent, etc.
NITEHOST	HT 373- 375	3	Nights Away from Home in Youth Hostel
NITESHEL	HT 376- 378	3	Nights Away from Home in YMCA or Shelter
NITEOTHR	HT 379- 381	3	Nights Away from Home in Other Type of Lodging
NITEDEST	HT 382- 384	3	Nights at Destination
LODGDEST	HT 385- 386	2	Type of Lodging at Destination
TRANSOD	HT 387- 388	2	Principal Transportation from Origin to Destination
FLIGHTOD	HT 389- 389	1	Regularly Scheduled or Charter Flight from Origin to Destination
CARIEROD	HT 390- 390	1	U.S. or Foreign Carrier from Origin to Destination
TRNTOSTA	HT 391- 392	2	Transportation to Origin Airport/Station/Terminal
GCDTOSTA	HT 393- 398	6	Great Circle Distance (GCD) to Airport/Station/Terminal
RTDTOSTA	HT 399- 404	6	Route Distance to Airport/Station/Terminal
TRNFRSTA	HT 405- 405	1	Transportation from Airport/Station/Terminal at Destination
VACATION	HT 406- 406	1	Vacation Trip
REASON	HT 407- 408	2	Reason for Trip
TRANSDO	HT 409- 410	2	Principal Transportation from Destination to Origin
FLIGHTDO	HT 411- 411	1	Regularly Scheduled or Charter Flight from Destination to Origin

Variable Mnemonic	Begin/End Position	Size	Description
CARIERDO	HT 412- 412	1	U.S. or Foreign Carrier from Destination to Origin
GCDOD	HT 413- 418	6	Great Circle Distance from Origin to Destination
GCDUSOD	HT 419- 424	6	Great Circle Distance from Origin to Destination, U.S. Portion
GCDINTOD	HT 425- 430	6	Great Circle Distance from Origin to Destination, International Portion
RTEDUSOD	HT 431- 436	6	Route Distance from Origin to Destination, U.S. Portion
GCDDO	HT 437- 442	6	Great Circle Distance from Destination to Origin
GCDUSDO	HT 443- 448	6	Great Circle Distance from Destination to Origin, U.S. Portion
GCDINTDO	HT 449- 454	6	Great Circle Distance from Destination to Origin, International Portion
RTEDUSDO	HT 455- 460	6	Route Distance from Destination to Origin, U.S. Portion
GCDRT	HT 461- 466	6	Great Circle Distance, Round Trip
GCDUSRT	HT 467- 472	6	Great Circle Distance, Round Trip, U.S. Portion
GCDINTRT	HT 473- 478	6	Great Circle Distance, Round Trip, International Portion
RTEDUSRT	HT 479- 484	6	Route Round-Trip Distance, U.S. Portion
INTDFLAG	HT 485- 485	1	U.S./International Destination Flag
STOPSTO	HT 486- 487	2	Stops to Destination
ST1REGCO	HT 488- 488	1	Region Code of First Stop to Destination
ST1REGNA	HT 489- 497	9	Region Name of First Stop to Destination
ST1DIVCO	HT 498- 498	1	Division Code of First Stop to Destination
ST1DIVNA	HT 499- 516	18	Division Name of First Stop to Destination
ST1STCOD	HT 517- 519	3	State or Foreign Country Code of First Stop to Destination
ST1STNAM	HT 520- 549	30	State or Foreign Country Name of First Stop to Destination
ST1STPOS	HT 550- 551	2	State Postal Abbreviation of First Stop to Destination
ST1MACOD	HT 552- 555	4	Metropolitan Area (MA) Code of First Stop to Destination

## TECHNICAL DOCUMENTATION

### CHAPTER 4.

# SAS Contents Procedure

This chapter provides the SAS contents procedure for the American Travel Survey (ATS) Public Use Microdata Files. The data are provided in two files; a Household Trip File (**hhtrip.sd2**) and a Person Trip File (**prtrip.sd2**). Each record in both files represents a household or person trip, respectively, and its associated geographic, socio-economic, and transportation-related characteristics. The contents procedure begins on page 4-1 for the Household Trip record and on page 4-8 for the Person Trip record.

#### SECTION A: HOUSEHOLD TRIP FILE

**Data Set Name:** ATSDATA.HHTRIP

**Member Type:** DATA

**Observation Length:** 2162

**Observations:** 337520

**Variables:** 328

#### Alphabetic List of Variables and Attributes

#	Variable	Type	Len	Pos	Format	Label

## TECHNICAL DOCUMENTATION

### APPENDIX A.

# Area Classifications

## CENSUS REGION AND CENSUS DIVISION

### Census Division

---

Census divisions are groupings of States that are subdivisions of the four census regions. There are nine divisions, which the Census Bureau adopted in 1910 for the presentation of data. The regions, divisions and their constituent States are:

### Northeast Region

#### New England Division:

Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut

#### Middle Atlantic Division:

New York, New Jersey, Pennsylvania

### Midwest Region

#### East North Central Division:

Ohio, Indiana, Illinois, Michigan, Wisconsin

#### West North Central Division:

Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska, Kansas

### South Region

#### South Atlantic Division:

Delaware, Maryland, District of Columbia, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida

#### East South Central Division:

Kentucky, Tennessee, Alabama, Mississippi

#### West South Central Division:

Arkansas, Louisiana, Oklahoma, Texas

### West Region

#### Mountain Division:

Montana, Idaho, Wyoming, Colorado, New Mexico, Arizona, Utah, Nevada

**Pacific Division:**

Washington, Oregon, California, Alaska, Hawaii

**Census Region**

Census regions are groupings of States that subdivide the United States for the presentation of data. There are four regions—Northeast, Midwest, South, and West. Each of the four regions is divided into two or more census divisions.

**Federal Information Processing Standards (FIPS) Code**

Federal Information Processing Standards (FIPS) codes are assigned for a variety of geographic entities, including states. The objective of the FIPS codes is to improve the use of data resources of the Federal Government and avoid unnecessary duplication and incompatibilities in the collection, processing, and dissemination of data.

**United States Postal Service (USPS) Code**

United States Postal Service (USPS) codes for States are used in all ATS data products. The codes are two-character alphabetic abbreviations. These codes are the same as the FIPS two-character alphabetic abbreviations.

**METROPOLITAN AREA (MA)**

The general concept of a metropolitan area (MA) is one of a large population nucleus, together with adjacent communities that have a high degree of economic and social integration with that nucleus. Some MAs are defined around two or more nuclei.

The MA classification is a statistical standard, developed for use by Federal agencies in the production, analysis, and publication of data on MAs. The MAs are designated and defined by the Office of Management and Budget, following a set of official published standards. These standards were developed by the interagency Federal Executive Committee on Metropolitan Areas, with the aim of producing definitions that are consistent as possible for all MAs nationwide.

Each MA must contain either a place with a minimum population of 50,000 or a Census-Bureau defined urbanized area and a total MA population of at least 100,000 (75,000 in New England). An MA comprises one or more central counties. An MA also may include one or more outlying counties that have close economic and social relationships with the central county. An outlying county must have a specified level of commuting to the central counties and also must meet certain standards regarding metropolitan

character, such as population density, urban population, and population growth. In New England, MAs are composed of cities and towns rather than whole counties.

To meet the needs of various users, the standards provide for a flexible structure of metropolitan definitions that classify an MA either as a metropolitan statistical area (MSA) or as a consolidated metropolitan statistical area (CMSA) that is divided into primary metropolitan statistical areas (PMSA).

**Primary Metropolitan Statistical Area (PMSA)**

If an area that qualifies as an MA has more than one million persons, primary metropolitan statistical areas (PMSAs) may be defined within it. PMSAs consist of a large urbanized county or cluster of counties that demonstrates very strong internal economic and social links, in addition to close ties to other portions of the larger area.

**Metropolitan Statistical Area (MSA)**

Metropolitan statistical areas (MSAs) are relatively freestanding MAs that are not closely associated with other MAs. These areas typically are surrounded by nonmetropolitan counties.

**Metropolitan Area Title and Code**

The title of an MSA contains the name of its largest central city and up to two additional city names, provided that the additional places meet specified levels of population, employment, and commuting. Generally, a city with a population of 250,000 or more is in the title, regardless of other criteria.

The titles for all MAs also contain the name of each State in which the area is located. Each metropolitan area is assigned a four digit code, in alphabetical order nationwide.

Boundaries of ATS metropolitan areas are not necessarily the same boundaries of current OMB defined metropolitan areas. Metropolitan areas shown for the ATS are those areas with estimated 1995 populations of 250,000 or more. However, data for the following metropolitan areas (Visalia-Tulare-Porterville, CA; Lafayette, LA; Brownsville-Harlingen-San Benito, TX; and Killeen-Temple, TX) are not shown due to insufficient sample size.

Following are the metropolitan areas and their component counties as defined for the 1995 American Travel Survey. Individual component counties which were not in the ATS sample are noted as such and are not included as part of the ATS defined metropolitan area, even though the component may be part of the OMB defined metropolitan area.

## TECHNICAL DOCUMENTATION

### APPENDIX B.

# Definitions of Subject Characteristics

#### **Activity**

Persons age 16 and over were asked to classify themselves by their main activity, i.e., working full or part time, a homemaker, in the armed forces, going to school, or retired.

#### **Air trip**

Any trip in which the type of transportation used to cover most of the miles on that trip was either by commercial airplane or a personal or corporate airplane.

#### **Business trip**

Any trip where the main purpose of the trip was given as business, combined business and pleasure, or convention.

#### **Census region and division**

Regions and divisions of the United States as defined by the Bureau of the Census. There are four regions which are subdivided into nine divisions. A detailed explanation is included in appendix a.

#### **Destination of trip**

The place reported by the respondent as the destination of the trip. If more than one place was visited on the same trip, the place which was the farthest point from the origin was considered the destination of the trip.

#### **Duration of the trip**

The number of nights spent away from home on a trip and includes nights spent at the destination, nights spent en route and nights spent on side trips. It is possible for a trip not to involve an overnight stay from home; a traveler could take a trip of 100 miles or more and return on the same day.

#### **Educational attainment**

The highest grade of school completed as of the date of the first interview determines the educational category of the traveler or household head.

#### **Family**

The family includes the householder and all relatives who are currently members of the household.

#### **Family income**

The total combined income for the previous 12 months of the householder and all persons related to the householder by blood, marriage, or adoption who were living in the household as

of the date of the first interview. Family income includes income from all sources, such as wages and salaries, net income from own business or own farm, social security, pensions, dividends, interest, rent and any other money income. The income of household members not related to the householder is not included in family income.

#### Household

The basic sampling and reporting unit for collecting travel and other information in the survey. A household consists of all persons who occupy a housing unit such as a house, apartment, or rooms that form separate living quarters.

#### Hispanic origin

The ethnic origin of the person was classified into 'Hispanic' or 'Not Hispanic.' Persons in the survey were asked to report their origin or descent by selecting the appropriate group from a list of ethnic origin. Persons of Hispanic origin include Mexican, Puerto Rican, Cuban, Central or South American, or some other Hispanic origin.

#### Household composition

The household was placed into one of several categories depending on the relationship of household members to each other and the presence or absence of children.

#### Household income

The total combined income for the previous 12 months of the householder and all persons related or unrelated to the householder who were living in the household as of the date of the first interview. Household income includes income from all sources, such as wages and salaries, net income from own business or own farm, social security, pensions, dividends, interest, rent and any other money income.

#### Household type

Each household was classified according to the number of household members and their relationship to each other. Household types include family households and non-family households. Family households include married-couple households, female householders, and male householders with and without children in selected age groups. Non-family households include male and female householders living alone or not living alone.

#### Lodging

Information on the types of lodging used by the travelers was collected in the survey and categorized into one of 16 different categories. Information on types of lodgings was

gathered for each trip by the destination in which the nights were spent.

#### Main purpose of trip

The respondent was asked to indicate the main reason motivating the travel and without which the trip would not have been made. Trip purposes were classified according to one of 16 different categories. The main reason for the trip as reported by the respondent was assigned to each household member who went on the trip.

*Business trip*—Any trip where the purpose of the trip is given as business, combined business with pleasure, or convention, conference or seminar.

*Pleasure trip*—Any trip where the purpose of the trip is given as visiting friends or relatives, rest or relaxation, sightseeing, outdoor recreation, entertainment, or shopping.

*Leisure trip*—Any trip where the purpose of the trip is given as rest or relaxation, sightseeing, outdoor recreation, entertainment, or shopping.

*Personal business trip*—Any trip where the purpose of the trip is given as school-related activity or personal or family business including weddings and funerals.

#### Nights away from home

The number of nights spent away from home on one trip, including nights spent at the destination, on stops to and from the destination and on side trips away from the destination. Nights away from home are broken into categories including nights at the destination, nights at stops and side trips, and nights en route.

#### Personal use vehicle trip

Any trip in which the main type of transportation used to cover most of the miles on that trip was auto, pickup truck, van, other truck, rental car, truck or van, recreational vehicle, or motorcycle.

#### Person-miles

An estimate of the aggregate distances traveled by all persons who took a trip and is based on the estimated transportation network miles traveled on the trip.

#### Person-nights

The number of nights spent by each person on a trip. For example, if two persons took a trip that involved five nights away from home, a total of 10 person-nights would be counted for that trip.

**Pleasure trip**

Any trip where the purpose of the trip is given as to visit friends or relatives, rest or relaxation, school activities, sightseeing, entertainment, outdoor recreation, or shopping.

**Principal means of transportation**

Each trip was classified according to the means of transportation used for most of the distance from the origin to the destination. Information on means of travel was reported for each trip in one of 18 different categories. Respondents were asked to report separately the major type of transportation used for going and for returning on the trip. If a different means was used for going and returning, the major means of transportation was the mode used on the going trip.

*Personal use vehicle trip*—Any trip in which the principal means of transportation was car, pickup truck, or van, other truck, rental car, truck or van, recreational vehicle or motor home, or motorcycle or moped.

*Airplane trip*—Any trip in which the principal means of transportation was commercial airplane or corporate or personal airplane.

*Bus trip*—Any trip in which the principal means of transportation was intercity bus, charter or tour bus, or school bus.

**Race**

The respondent was asked to report the race among the categories provided with which he or she and other household members most closely identifies.

**Respondent**

The person who reported the information about the trip. Survey procedures specified that persons 15 years old or older be interviewed personally about any trips they took during the reference period. Household trips taken by more than one household member were reported by the first member interviewed who went on the trip. Trips taken by household members under 15 years of age were reported by a knowledgeable adult household member. Procedures were established to ensure that a household trip taken by more than one household member was reported only once with an indication of each of the household members on the trip.

**Round trip distance**

The round trip distance is based on the estimated transportation network miles traveled from the residence of the household at the time of the trip to the destination and back. Miles are calculated separately from origin to destination and destination to origin and added together to allow for differences in routes traveled each way.

*Person miles*—An estimate of the aggregate distances traveled by all persons who took a trip based on the route miles traveled on the trip. For example, if three persons took a trip that involved 220 round trip miles, the travel would be counted as 660 person miles.

*Vehicle miles*—An estimate of the aggregate distances traveled by travelers in all personal use vehicles based on the highway route miles traveled on the trip.

**Travel party size**

The travel party was categorized into one of three groups depending on whether household and/or non-household members were on the trip.

1. Travel Party—the total number of household and non-household members on the trip.
2. Household Travel Party—the total number of household members on the trip.
3. Non-Household Travel Party—the total number of non-household members on the trip.

**Travel party type**

Members of the household who traveled together were categorized into one of 8 categories describing the number of household members on the trip and their relationship to each other.

**Trip**

A trip is defined as 'each time a person goes to a place at least 100 miles away from home and returns.' Respondents were asked to report trips of 75 miles or more as a means of reducing possible failure in reporting trips of 100 miles or more due to a misconception by the respondent of the actual miles traveled. Trips subsequently calculated to be less than 100 miles were excluded from the estimates. A household trip refers to a trip in which one or more members of a household traveled together. A person trip refers to a trip taken by an individual. For example, if three persons from the same household go together on a trip, the trip is counted as one household trip and three person trips. If persons goes alone on two trips, the trips are counted as two household trips and two person trips. The following types of trips were excluded from the 1995 survey:

1. Trips taken as a member of a CREW for an airplane, train or ship;
2. Trips taken while working as a bus driver or truck driver; and
3. Trips taken in military vehicles by members of the military on active duty.

*Household trip*—A household trip refers to a trip in which one or more members of a household traveled together.

*Person trip*—A person trip refers to a trip taken by an individual. For example, if three persons from the same household go together on a trip, the trip is counted as one household trip and three person trips.

**Vacation trip**

Vacation is considered to be an occasion when trips are taken, but is not considered to be a purpose of travel for this survey. Respondents were asked whether or not the specific trip taken was considered as a vacation trip. Additionally they were asked the main purpose of all trips reported regardless of whether the trips were vacation trips.

**Vehicles**

The number and type of vehicles owned or available for use by the household.

**Weekend trip**

Each trip was classified as a weekend trip or as not a weekend trip. A weekend trip is a trip of one to five nights including a Friday and/or Saturday night stay. Travelers who stay one or two nights away including a Friday or Saturday night are defined as regular weekend travelers. Those who stay three to five nights away including a Friday and/or Saturday night stay are defined as long weekend travelers.

## TECHNICAL DOCUMENTATION

### APPENDIX C.

# Accuracy of the Data

## SAMPLE DESIGN, ESTIMATION AND ERRORS

### A. INTRODUCTION

---

This documentation explains the sample design, *estimation procedure*, known *sources of error* and estimates of error for the American Travel Survey. It illustrates how to use estimates of sampling error to create confidence intervals, and enables the data user to be confident that he/she is using the data accurately.

The data presented in this publication are based on a sample of households, group quarters, such as, dormitories, religious group dwellings, and family-type housing on military bases. Military barracks and institutions, such as prisons and nursing homes, are excluded. The data shown are estimates of the values that would have been obtained if each household in the country had been interviewed. Estimates are expected to be subject to two basic types of error—sampling error and nonsampling error. These two types of error are explained in later sections of this documentation.

### B. SAMPLE DESIGN

---

The American Travel Survey (ATS) sample is a state-based design of approximately 80,000 addresses from the 1980-based Current Population Survey (CPS) sample. The sample size, which differs by state, was selected to ensure that reliable state estimates could be made. The sample was selected in two stages.

#### 1. Selection of Sample Areas for CPS

The first stage was the selection of a sample of 729 geographic areas known as Primary Sampling Units (PSUs). PSUs were formed by dividing the United States into 1,973 areas made up of counties (or minor civil divisions in New England and Hawaii). Of these PSUs, 314 were in sample with certainty because of their large populations. These 314 PSUs are known as self-representing (SR).

The remaining 1,659 PSUs were divided into 415 groups or strata based on demographic and economic characteristics (population growth, proportions of blacks and Hispanics in certain states, and distribution of the population by occupation, industry, age and sex). These strata were formed within state. Within each stratum, probabilities were assigned to each PSU proportionate to the total population as of the 1980 census. One PSU was then selected from each stratum. These PSUs are referred to as non-self-representing (NSR), since the sample of households from a single sample PSU represents all of the households in the stratum from which the PSU was selected.

**2. Selection of Clusters of Sample Addresses for CPS**

The section stage, involved several steps to select the addresses to be enumerated within each sample PSU in the CPS. First, the 1980 census enumeration districts (EDs), which are administrative units and contain an average of about 300 addresses, were sorted geographically. Within the geographic sort, the EDs were ordered so the sample would reflect the demographic and residential characteristics of the PSU. Within each sample ED where 1980 census addresses were complete and where new construction is governed by building permits, the 1980 census addresses were sorted geographically and grouped into clusters of approximately four neighboring addresses. Next, clusters of addresses were selected systematically with sampling intervals varying by state. The CPS actually selected 20 samples at one time. Thus, the next 19 consecutive clusters were also selected at each sample cluster. Sampling intervals were adjusted within NSR PSUs by multiplying the sampling interval of the state by the NSR PSU probability of selection.

Clusters of new construction since the 1980 census were also formed from lists of building permits issued. In sample EDs where 1980 census addresses were not complete or where new construction is not governed by building permits (area EDs), a sample of land areas was selected. Field representatives listed all addresses (i.e., 1980 census addresses, as well as addresses built since the census) currently in these sample land areas. Clusters of addresses were systematically selected from these listings. In areas that issue building permits, non-mobile homes built since the 1980 census were screened out.

**3. Selection of Clusters of CPS Sample Addresses for ATS**

Because the sample design is state based, the sample size differs by state and depends on the reliability requirements for each state as well as the travel patterns for the state. Our ultimate goal for the ATS was a sample of trips at least 100 miles in length, one way, that met our reliability requirements. Since the universe of trips of this length varied by state, it was necessary to select different size samples for each state to meet the reliability requirements for a given state. In general, the reliability requirements were the same for all states.

The ATS sample was selected by sampling the CPS clusters from the most recently retired CPS samples available. For many states, it was necessary to select from all or part of several CPS samples. This means that several adjacent CPS clusters were selected for the ATS. In these states, the average ATS cluster size of neighboring addresses was larger than 4. See Table C-2 for an estimate of this average cluster size for each state.

The ATS did not update the new construction in CPS that was selected from the building permit sample or the area EDs. Consequently, the ATS does not have a complete sample of new construction in its sample areas.

**4. Assignment to Interview Group**

The survey, which is primarily a telephone interview survey, employed a split-sample design with cases in each CPS PSU being assigned for interview at the Census Bureau’s three telephone centers (centralized CATI) or in the field. The cases assigned to interviewers in the field using laptop computers could be done by telephone (decentralized CATI) or by personal visit (CAPI). About 45,000 cases were assigned to centralized CATI and 35,000 were assigned to decentralized CATI/CAPI.

In January and February of 1995, interviewers at the telephone centers contacted the ATS households by telephone and conducted the Post Mail Initial Call Screener (PMICS) operation. During this call, the interviewers verified the sample address and telephone number. PMICS also tried to obtain correct telephone numbers for cases that had incorrect telephone numbers.

Some households could not be reached by telephone. Consequently, before assignment to an interview group, the sample was divided into the “good” and “bad” phone strata based on the PMICS results. If a sample address had a valid phone number it was placed into the “good” phone stratum. All other households were placed into the “bad” phone stratum.

In order to increase the number of “good” stratum cases, additional retired CPS sample cases which were last interviewed in January, February, July, August, September and October 1994 were added. This is referred to as the “new” sample. Since this sample was added late, these cases did not go through the PMICS operation. Cases that had a CPS phone number were put into the “good” stratum since the phone numbers were expected to be fairly accurate. The remaining cases were put into the “bad” stratum. Table C-1 shows the distribution of the sample by “good” and “bad” strata within the old (i.e., the ATS sample that went through PMICS) and new sample.

**Table C-1: Distribution of ATS Sample by Strata and Sample**

Sample	Strata		Total
	Good	Bad	
Old	50522	10537	61059
New	17662	1444	19106
Total	68184	11981	80165

Two-thirds of the cases in the “good” stratum were sent to centralized CATI and the remainder were sent to decentralized CATI/CAPI. One-fourth of the cases in the “bad” stratum were sent to decentralized CATI/CAPI. The remaining units in the “bad” stratum were not sent for interview. Therefore, the weights on the decentralized CATI/CAPI cases in the “bad” stratum were increased to represent the cases from the “bad” stratum that were not used.

Each ATS sample household was interviewed three or four times from April 1995 to March 1996 in order to collect information about each household’s travel for all of 1995. Each of these interviews, called a cycle, concentrated on trips taken during the reference period. The first interview uses January 1 to the date of the first interview as the reference period. For subsequent interviews, the reference period was defined as the date of the previous interview to the date of the current interview.

Within each cycle the sample was divided into three representative samples called waves. A sample unit assigned to a wave stayed in the same wave throughout the duration of the survey. Each wave was interviewed in a different month of the cycle to spread out the interviewing and processing workloads, as well as to even out the effect of recall on the sample results.

The telephone centers attempted to complete CATI interviews with as many of their cases as possible. Cases that the telephone centers could not interview were not sent out to the field for interview (i.e., recycled) as is typically done for Census Bureau surveys that conduct interviews from the telephone centers. The weight on some of the cases assigned to decentralized CATI/CAPI was adjusted to represent the cases the telephone centers did not interview. To ensure the comparability of the centralized and decentralized components, a maximum CATI approach was used from the interviewers’ homes. The field interviewers were given some guidelines to use so their workloads would be completed using methods as similar as possible to the procedures used at the telephone centers.

**5. Sample Size and Interview Results**

Of the 80,000 addresses in sample, 61,000 were selected from the old sample and 19,000 were selected from the new sample. Table C-2 contains the number of interviews in each state by cycle. Table C-3 presents the results of the cycle interviewing at the national level for centralized CATI and decentralized CATI/CAPI, respectively. Households assigned to wave 3 completed their interviewing in three interviews instead of four. This accounts for the lower number of sample cases displayed in these tables for the fourth cycle.

**Table C-2. Average Cluster Size and the Number of Interviews by Cycle for Each State**

State	Interviews in each cycle				Average Cluster Size

**NOTES:**

1 Units which were eligible for interview but their data was not collected (e.g., no one home, refusals, etc.).

2 Units which were not eligible for interview (e.g., unit demolished, vacant, etc.).

**C. ESTIMATION**

The household-trip and person-trip weights were derived as a product of the inverse of the probability of selection of the sample household and several weighting factors which accounted for noninterviews, household under coverage, within-household under coverage and trip under reporting.

Weighting factors were computed and applied separately within each cycle. Most of the weighting factors were computed at the household level and applied to all corresponding household and person trips that were reported by a particular household. Some of the factors were computed at the person level and only applied to certain household and person trips. The remaining factors were computed at the trip level and applied to specific household and person trips. The types of household and person trips to receive these factors will be defined in the following sections that describe the factors.

Initially, because of differences between the old and new sample in the classification of “good/bad” phone strata the probability of selection was calculated for each sample separately. An adjustment to this probability was made to building-permit/new-construction sample households to account for some of the building-permit/new construction not included in the ATS sample. After adjusting for household level noninterviews, a combining-samples factor was calculated at the state level that reduced the weights of both the old and new samples so they could be combined to produce the ATS estimates.

**1. Noninterview Adjustments**

Four different adjustments were made for households (or persons) that could not be interviewed. For each of these adjustments, factors were computed for a set of cells. The numerator of the factor was the weighted count of interviews and noninterviews in a given cell. The denominator was the weighted count of interviews in the same cell.

- The *first noninterview adjustment* adjusted for the households sent to the phone centers (centralized CATI cases) which were not interviewed. The centralized CATI noninterviews were made up of three types of units: (a) units that would have been interviewed if personal visits were made, (b) units that were eligible for interview but their data was not collected (e.g., refusals), and (c) units ineligible for interview (e.g., vacant). Since it was not known whether or not the centralized CATI noninterviews were eligible for interview, this adjustment involved applying greater weight to both interviews and noninterviews from the decentralized CATI/CAPI cases in the “good” stratum.

The decentralized CATI/CAPI cases that were used to represent the centralized CATI noninterviews were selected based on characteristics that would have made them unlikely for the phone centers to have been able to complete an interview. These characteristics include those not accessible by phone (no phone or incorrect or missing phone number), persons who refused by phone or requested/required a personal visit interview, vacant, etc.

Because of our sample design, this adjustment for the centralized CATI noninterviews was a critical part of our estimation system. Consequently, special procedures were put into place to aid in identification of the appropriate decentralized CATI/CAPI cases to include in the adjustment. The mode of interview (personal visit or telephone), the reason for a personal visit, and the source of the phone number was captured. In addition, if the phone number recorded in the interview was different from the one the interviewer was given by headquarters, the case was sent to a telephone look-up operation at the centralized CATI facility to see if they could find the correct phone number.

After these cases were identified, they were assigned to the appropriate cells for the adjustment. Cells were based on state, wave and sample (old and new). This adjustment was done at the household level.

- The *second noninterview adjustment* adjusted for decentralized CATI/CAPI noninterviews that were eligible for interview but the respondents refused, were not home after repeated visits, or were unavailable for other reasons.

This adjustment was applied to all interviews from both the centralized CATI and the decentralized CATI/CAPI samples. Cells for sample households in the “good” stratum in the old sample were based on state, wave, CPS income, and metropolitan statistical area status. Cells for the remaining households were based on state, wave, CPS income and sample. This adjustment was done at the household level.

- The *third noninterview adjustment* adjusted for interviewed households known to have traveled, but were dropped because of missing or inadequate trip information. This factor increased the weight of the centralized CATI and decentralized CATI/CAPI traveling households which had adequate trip data to represent households that did not have valid trip data. Cells for traveling households in the “good” stratum in the old sample were based on state, wave, ATS income, and metropolitan statistical area status. Cells for the remaining traveling households were based on state, wave and sample. This adjustment was done at the household level.

- The *fourth noninterview adjustment* was implemented after samples were combined and the household level weights were computed. This adjustment was done at the person level for households where some members were interviewed but others were not. The cells were based on state. This adjustment accounted for certain types of trips taken by persons who were known to live in the household during the reference period, but who were not available to be interviewed. It was assumed that if these persons took trips with other household members, the trip would have been reported by one of them. Therefore, this factor was only applied to trips that did not include any other household members (single-person household trips).

## 2. Ratio Estimation Factors

The ratio estimation factors adjusted the sample to better reflect the universe from which the sample was selected and to adjust for missed household-trips and person-trips due to household and person under coverage.

- The *first ratio estimation factor* reduced the contribution to variance that results from selecting a sample of PSUs rather than drawing sample households from every PSU in the nation. The cells were based on state and race (black/nonblack). It was applied to PSUs that are not self-representing in states that have a substantial number of black households. The procedure accounted for differences that existed at the time of the 1980 census between the race distribution of the sample PSUs in the state that were not self-representing and the race distribution of all PSUs in the universe that were not self-representing. This adjustment was applied at the household level.

- The *second ratio estimation factor* adjusted the sample to better reflect the total number of households within each age of reference person and tenure cell in a state. This corrects for missed household-trips and person-trips due to household under coverage caused by deficiencies in our original sampling lists, as well as possible survey error caused by data collection and incorrect processing assumptions. Independent household controls were prepared by applying a state household formation rate by age of householder. This rate was derived from the change in householder rates (obtained from CPS data) from 1990 to the estimate date and home-ownership rates obtained from the Housing Vacancy Survey. The methodology for total household estimates is described in detail in Current Population Reports, Series P-25, No.1123 (U.S. Bureau of the Census). A similar methodology was used for household estimates by tenure. These estimates served as the numerator for this factor.

Household interviews were grouped into cells by state, age of reference person and tenure. The weighted count of these sample units using the inverse of the probability of selection and all previous factors, excluding the fourth noninterview adjustment, served as the denominator. The resulting factor was applied at the household level.

- The *third ratio estimation factor* adjusted the sample to better reflect the total number of persons within each age and sex cell in a state. This corrects for missed household-trips and person-trips due to person under coverage within households. Independent population controls were obtained from the resident part of the state, age, and sex estimates program described in U. S. Bureau of the Census, Current Population Reports, Series P-25, No. 1127. This program updates census data with information from a variety of other data sources that account for births, deaths and net migration. Estimated numbers of resident Armed Forces personnel and institutionalized persons reduce the resident population to the civilian noninstitutional population. Estimates of net census undercount, determined from the Post Enumeration Survey, are added to population estimates.

The method used in this adjustment assumed that all persons with a given age/race/sex do not have an equal chance of being missed. In particular, it assumed that the reference person and his /her spouse were always picked up by the survey if the household was interviewed (i.e., only persons other than reference persons or spouses could be missed in interviewed households). Thus, the numerator of the ratio equaled the independent estimate of the civilian noninstitutional persons in the cell minus the ATS sample estimate of reference persons and spouses. The denominator of the ratio equaled the ATS sample estimate of persons

in the cell, excluding reference persons, their spouses and persons in the military.

This factor was done in two steps, first by grouping the sample persons into cells by age and sex within state and computing the initial factor. After applying the initial factor, the persons were then regrouped into cells by age, sex, Hispanic origin and black/nonblack for the total USA. This process was repeated to bring the ATS sample estimates into closer agreement with both sets of independent estimates.

The final version of the third ratio estimation factor, which was the product of all iterations of the state and U.S. factors, was applied to all person-trips reported by persons (including military) who were not reference persons or their spouses. It was also applied to all of their single-person household trips. It was only applied to their single-person household trips because it was assumed that trips taken with other household members would have been reported by one of them.

### 3. Trip Adjustment Factors

The trip adjustment factors were applied to specific trips and attempted to account for aspects of the ATS that could result in the under coverage of these trips.

- The *proxy adjustment factor* adjusted for trips that were missed because the ATS generally collected the travel information for the entire household from one household member — the proxy respondent. When a sample of households were reinterviewed for response error measurement, more trips were reported during the reinterview than the initial interview. Research showed that trips that did not include the household respondent were missed at a higher rate than trips that did include the household respondent. For trips originally reported by proxy-response (the respondent was not on the trip), but collected by self-response (the respondent was on the trip) during the reinterview, a ratio was formed of reinterview trips divided by initial interview trips. For trips collected by self-response both during the original interview and reinterview (same respondent interviewed both times), the ratio was also formed by dividing reinterview trips by initial interview trips. The proxy adjustment factor was equal to this ratio for proxy response divided by this ratio for self-response. This factor was applied to all household trips that did not include the household respondent. It was also applied to all the corresponding person trips. This increase in the proxy-response factor relative to the self-response factor represents the missed trips due to the use of proxy respondents.

- The *recall factor* adjusted for trips forgotten by the respondent due to the length of time between the trip and

the date of the interview. They are more likely to correctly report a trip they took a month ago rather than one they took three months ago. Beginning in April, one-third of the trips collected for a given month was subject to one month of recall, another third was subject to two months of recall and one-third was a combination of three months of recall and less than one month of recall. Prior to April, all recall was greater than three months.

Identical trips were omitted from this factor since a respondent was not likely to forget a trip when the same trip is taken repeatedly. For the remaining trips, estimates of trips by month were tabulated by mode of travel and wave. The wave closest to a given month was chosen to represent the best estimate of the number of trips taken during that month. Trips from other waves were adjusted for that month to equal the estimate from the closest wave. For example, Wave 2 was interviewed in June so it had the best estimates for May trips. Waves 1 and 3 were adjusted to equal Wave 2 for the number of trips in May. The recall factor was applied to the same household trips (and their corresponding person trips) that were used to compute the factor.

- The *fatigue factor* adjusted for the missed trips that should have been collected in later cycles. Our estimates showed that fewer trips took place during the summer months (i.e., June, July and August) than during March, April, and May. The estimates also showed fewer trips in November and December than in September and October. These two trends seemed illogical. This phenomenon was attributed to respondent fatigue, i.e., some respondents tended to report fewer trips in later interviews in order to shorten their interview. This adjustment used a monthly distribution of trips calculated from previous surveys. The ratio of trips between the ATS and previous surveys was established for January through May trips. Most of these trips were collected during the first cycle. Since this was the first interview, the ATS trip estimates would not have been affected by the fatigue effect. Although some of the May trips were collected in the second cycle, the fatigue effect on these trips was accounted for by the recall factor. For each of the later months, the ratio of trips between the ATS and previous surveys was divided by this first-cycle ratio to yield the fatigue factor. This relative increase in the ratio of the two estimates for the later months compared with the first cycle ratio represents the missed trips due to fatigue. The appropriate fatigue factor was applied to all household trips and their corresponding person trips for June through December. The factor was applied to trips used to compute the factor, as well as, to the trips defined above that were excluded when the factor was computed.

**NONSAMPLING ERRORS**

Nonsampling errors are generally the largest source of error. These errors are attributable to a number of causes:

- incomplete coverage of all housing units and persons within households in the U.S.,
- households either can not be contacted or refuse to participate,
- items answered incorrectly or not answered at all,
- trips not reported by respondent
- trips reported incorrectly,
- approximations in the mileage estimation algorithm,
- incorrectly keyed data,
- imputing for missing data, and
- rounding.

Below is an explanation of the major sources of error and their impact on the ATS data.

**REINTERVIEW PROGRAM**

There were two parts to the ATS reinterview program: (a) a quality control falsification check and (b) a response error measurement of trip reporting. The sample for each part was selected independently.

The *falsification check* consisted of a 5 percent sample of ATS decentralized CATI/CAPI cases each month. The check was done by decentralized CATI/CAPI. The objective was to make sure the interviewer conducted the interview, properly classified interviews and noninterviews and did not falsify the data. During the reinterview the respondent was asked if they were contacted by an interviewer. The reinterviewer also verified the interview status from the original interview. Each interviewer was checked at least once.

The *response error measurement* consisted of a sample of about 650 completed interviews from each of the three waves. The interviews were conducted between August 1995 and March 1996. The objective was to see if respondents reported trips correctly. Most of the questions from the original interview were re-asked during the reinterview and differences in the main trips reported in the original interview and reinterview were reconciled. The results showed respondents may be less likely to forget trips taken by airplane, trips for business and pleasure, longer duration trips, and trips with more than one household member.

**COVERAGE ERROR**

Each home in the ATS sample represented a number of other homes. Because of incomplete sampling lists (i.e., under coverage), the homes in the survey did not represent all homes in the country. In particular, there was no coverage of building permit new construction built after 1993. In 80 percent of the states there is no building permit new construction built after 1992. These units are represented, in part, by other units whose permits were issued after April 1990.

In nonpermit issuing areas, the Census Bureau also missed non-permit new construction, new mobile homes, and new mobile home parks built between mid-1992 and January 1995. In 80 percent of the states the sample is lacking this coverage between mid-1991 and January 1995. In permit issuing areas, new mobile homes that moved into sites not covered in the 1980 census were missed.

To adjust for under coverage, the Census Bureau increased the household estimates proportionally for several key characteristics so that the published numbers of households match independent estimates. If the sample units do not adequately represent the missed units, some nonsampling error will be introduced into the data.

In addition to adjusting the ATS sample for whole households that were missed, another adjustment for missing people within households was necessary. Householders or their spouses were never assumed to be missed within interviewed households. As a result, the Census Bureau adjusted the weight on persons who were not household heads nor spouses to account for the remaining person under coverage. Assumptions about missed persons within households may not be correct (e.g., spouses may also be missed) which may introduce error into the estimates.

Within missed households, the household and person trips associated with the missed households were also assumed to be missed. A similar assumption was made for missed persons within households and for all single-person households. If more than one household member took a trip we assumed the trip would have been reported by the other household member. These assumptions may not be correct in some cases and will introduce some error into the estimates.

**D. Nonresponse Error**

There are two main types of nonresponse error: (a) noninterview error and (b) item nonresponse error. *Noninterview error* had three main sources. The first was centralized CATI cases the Census Bureau could not contact. This represented about 20 percent of the old sample and 35

percent of the new sample centralized CATI cases. The second was eligible occupied decentralized CATI/CAPI units who either could not or would not respond to the survey. This represented about 10 percent of the decentralized CATI/CAPI sample. The third was people in interviewed households for whom the Census Bureau could not collect trip data. This represented less than one-half of one percent of the people in sample households.

The centralized CATI portion of the sample had a particularly high noninterview rate. Normally, units not interviewed by centralized CATI are sent out to be interviewed by decentralized CATI/CAPI. To control the cost of the survey, the Census Bureau decided not to follow up these noninterviews and instead chose to adjust for them in the estimation process. Information was collected during the interview to help identify the decentralized CATI/CAPI units that centralized CATI would not have been able to interview. These decentralized units were used to represent the centralized CATI noninterviews. An additional source of nonsampling error could be from incorrectly identifying the decentralized CATI/CAPI units that centralized CATI would not have been able to interview between our old and new sample.

The following table summarizes the classification of units from both the centralized CATI and decentralized CATI/CAPI samples included in the adjustment separately for the old and new samples for Cycle 1. The numbers reflect the percentage of the overall sample from each of the four groups that were included in the adjustment.

The table below illustrates the difficulty the Census Bureau had in identifying decentralized CATI/CAPI units to include in the adjustment. Although specific situations (e.g., refusals) do not appear equally in both the centralized CATI and decentralized CATI/CAPI samples, the Census Bureau feels confident that the proper decentralized CATI/CAPI units were identified in the old sample. For the new sample, the Census Bureau probably missed some refusals.

The percentage of centralized and decentralized units included in the adjustment is very close for the old sample.

The differences in individual categories are more likely to be due to misclassified units rather than missed units. The CATI interviewer may not have assigned the same reason he or she could not interview the unit as a decentralized CATI/CAPI interviewer would have. For example, some centralized CATI units could not be classified and so were put in a “miscellaneous” category. These could be vacant or temporarily absent.

The percentage of centralized and decentralized units included in the adjustment appears to differ for the new sample. Differences are mainly attributable to the difference in refusal rates. The Census Bureau had a difficult time identifying decentralized CATI/CAPI households that would have been refusals for centralized CATI. Some of the other individual categories also appear to differ but those categories probably have units that were misclassified rather than missed. For example, since the new sample did not have its phone numbers screened, some centralized CATI cases that were actually vacant and temporarily absent units were classified as Bad/No Phone or miscellaneous noninterviews.

If the Census Bureau could not get all the information about all occupants they made several call-backs to the household to finish the interview. In these cases, only the final mode (i.e., personal visit or telephone) of interview used was recorded which could have resulted in more telephone interviews than should have been. This would have excluded interviewed decentralized CATI/CAPI units from the adjustment that should have been included because the decentralized CATI/CAPI units were telephone interviews rather than personal visit interviews. This, in turn, would have caused decentralized CATI/CAPI noninterviews to account for a disproportionately high number of centralized CATI noninterviews.

If the Census Bureau did not identify the correct units, some nonsampling error could be introduced into the estimates by this adjustment. Moreover, if the proportion of occupied units and traveling households in the centralized CATI noninterviews and in the decentralized CATI/CAPI

cases used to represent these noninterviews are not similar, some bias may have been added to some travel characteristics. It is likely that the Census Bureau excluded some interviewed decentralized CATI/CAPI units from the adjustment that should have been included.

This means ineligible units will get a higher weight than they should and interviewed units will get a lower weight resulting in an underestimate

**Table C-4**

Noninterview Reason	Old Sample Centralized CATI	Decentralized CATI/CAPI	New Sample Centralized CATI	Decentralized CATI/CAPI
Refusals	10.5	9.4	14.3	10.3
Other Noninterviewed				
Occupied Units	<.1	<.1	<.1	<.1
Temporarily Absent	1.3	2.1	1.9	3.4
Ineligible Units	.3	.5	.5	.7
Vacant	1.8	3.4	2.2	5.0
Bad/No Phone	2.7	2.6	10.0	8.5
Misc. Noninterviews	1.6		3.0	
Language	.3	.1	.5	.3
Total	18.5	18.1	32.5	28.4

of the number of trips. This is more of a problem for the new sample than the old sample. However, there is no way to measure the magnitude of this effect using data from the survey.

To represent the eligible occupied decentralized CATI/CAPI noninterviews, the Census Bureau used CATI and decentralized CATI/CAPI interviews with similar income and geography. If these interviews did not adequately represent the noninterviews, some nonsampling error was introduced into the estimates.

For non-interviewed people within interviewed households an assumption was made that the person's trip would have been reported if they took the trip with another household member. As a result, the Census Bureau only adjusted single-person household trips, and the corresponding person trips, to account for these non-interviewed people. If this assumption is incorrect, the ATS will underestimate the number of household and person trips. Finally, some interviewer notes indicated the household traveled but not detailed trip data was collected. In this case, trips from all other traveling households represented trips taken by these households.

*Item Nonresponse Error* - The main reason this type of error happens is because the respondents either do not know or do not want to give the answer to a question. Any item is subject to this error. Sensitive items, such as income, typically have the highest incidence of item nonresponse. We imputed all items for missing values.

The ATS imputed income for about 18 percent of the cases. Education was imputed for about 2.5 percent of the cases. Age was imputed for about 1 percent of the cases. All other demographic items (e.g., race, sex, etc.) had values imputed less than .5 percent of the time.

In some cases, the imputed data will not be the correct data. However, it is assumed that on average, the imputed data will adequately represent items for which no data were collected. Nonsampling error introduced by the imputation procedures will remain in the data.

Trip destinations (zip codes) were imputed for about 7.5 percent of trips (based on place names and state of origin provided by the respondent). The algorithm used the most populous city in the destination state as the destination. Depending on where this city is located relative to the state of origin, mileages could be consistently overestimated or underestimated. The number of trips to this metropolitan area may also be overstated.

In addition, the Census Bureau imputed return dates if there were 5 or more identical trips (i.e., trips with the same trip characteristics—destination, purpose, family travelers, etc.—as a trip already reported). This may distort trip

estimates by month; however trips by travel quarter should be accurate since there were up to three months between dates of interview when household members could report travel.

A number of edits designed to improve the data and eliminate inconsistencies were also included during the ATS processing. For example, the edits made demographic items such as race and ethnicity of children consistent with that of one or more of the parents. Also, the age of children had to be less than the parents age. The edits made sure trip data such as the leave and return dates were consistent with the number of nights the respondent spent traveling. These edits were done to try to improve the data. If the assumptions used to perform the edits are not correct some nonsampling error will be introduced into the data.

### E. MISREPORTING OF TRIPS

We know that respondents misreported trips for a number of reasons. This section describes the different reasons trips may have been misreported.

*Too Many Trips*—Respondents may have reported too many trips in some cases because the total number of nights they spent traveling during the year was greater than 365. Rather than drop trips, the Census Bureau adjusted the number of nights they spent on some trips. Too many trips may also have been reported because more than one family member reported the same trip.

*Recall*—Respondents have a more difficult time accurately reporting trips the farther the trip takes place from the date of interview. For example, they are more likely to correctly report a trip they took a month ago rather than one they took three months ago. The data verified this fact; there were consistently more trips reported for a month when the recall length was shorter. For example, there were more May trips reported in June interviews than in July interviews. An adjustment for trips lost due to recall error was made to the ATS data assuming the shortest recall trips were the most accurate. Estimates based on one month recall could also be missing trips. In addition, trips with one month recall are more likely to be affected by telescoping (see explanation below on *telescoping*) which would overestimate trips in the most current month. However, the Census Bureau believes making this adjustment made the trips estimates more accurate than not using this adjustment. The effect of this adjustment varied by mode of travel.

*Telescoping*—Telescoping is the reporting of a trip closer to the time of interview than when the trip actually took place. There are two types of telescoping: (a) internal and (b) external. Internal telescoping occurs when trips that

took place during the reference period are reported later than they actually occurred. For example, if the respondent is asked in April about trips they took between January and March, they may report February trips in March.

External telescoping occurs when trips that took place outside the reference period are reported to have taken place during the reference period. For example, if the reference period is January through March, the respondent may report some December trips. In the first interview, respondents were asked about trips completed after January 1, 1995. The Census Bureau hoped that the new year would have a bounding effect on the respondents and minimize the effect of external telescoping. During later interviews, the Census Bureau made the last 10 trips reported during the previous interview available to the interviewers. They used this information to make sure trips reported during the previous interview were not telescoped into the current reference period.

Telescoping impacts the data in three ways. First, it will artificially increase the estimate of trips because trips completed the previous year could be telescoped into the reference period for the first interview. In addition, a trip reported during a previous interview could be reported again. These would tend to overestimate trips. Second, the distribution of trips by month could be distorted by internal telescoping. Since the 1995 ATS sample was split into three parts with each part interviewed in a different month, this effect should even out over the year for all months except January - April. Finally, trips that took place in November and December of 1995 could have been telescoped into 1996 and would not have been reported. This would tend to underestimate trips in these months.

*Respondent Fatigue*—Our estimates showed that fewer trips took place during the summer months (i.e., June, July, and August) than during March, April, and May. The estimates also showed less trips took place in November and December than in September and October. These two trends seemed illogical. The Census Bureau believes this occurred because, after the first interview, respondents knew that if they reported less trips the interview would be shorter. This is known as respondent fatigue. The Census Bureau made an adjustment for trips lost due to respondent fatigue. The fatigue factor was not applied to trips in January–May. The Census Bureau assumed there was no respondent fatigue for the January–April trips since it was the first interview for the entire sample. The Census Bureau assumed any respondent fatigue in the May trips was accounted for in the recall adjustment.

These assumptions are probably not entirely accurate. Trips early in the year (e.g., January and February) may be overstated because of external telescoping from November

and December 1994. In addition, November and December trips for 1995 may be understated because of telescoping into the next year. This would distort trip distributions causing fatigue factors that are too low and underestimating trips. The adjustment assumes all trips were affected the same by respondent fatigue. This may not be true. Respondents may have reported trips with no stops but omitted trips with stops since they're more cumbersome to report. There is a chance that the Census Bureau underestimated certain types of trips such as these. As a result, some nonsampling error probably remains in the trip estimates.

Also, trips during November and December may be understated because of the Federal government shutdown that occurred during December 1995 and January 1996. The fatigue factor will be adjusting for some of this recall error. Since the recall adjustment was done by mode of travel but the fatigue factor was not, estimates of trips by mode of travel for these months may be distorted.

*Proxy Trip Reporting*—Proxy trip reporting means a trip was reported by someone who was not on the trip. This occurred because the Census Bureau only interviewed one respondent per household if the person was able to give information on travel for all the people in the household. The reinterview results showed that proxy trips were missed at a higher rate than trips reported by someone who took the trip (self-reported trips). The Census Bureau made an adjustment to account for trips missed due to proxy trip reporting. The impact of the adjustment depends on how well trips reported by proxy represent the missed proxy trips.

## F. MILEAGE ESTIMATION

The ATS interviewer asked about all trips over 75 miles one-way even though published reports include trips of 100 miles or more. Trips between 75 and 100 miles were included to make sure all trips over 100 miles were included since many people may not know the exact trip mileage. Respondents may have failed to report trips over 100 miles despite this buffer.

There are really two types of mileage estimation - one for trips taken by highway and one for other types of trips (e.g., trips by rail or air). Distances calculated for trips by rail and air are accurate because the number of different routes are limited and the origin and destination points are very specific. For trips taken by highway (e.g., car, truck, RV, etc.) the estimates are somewhat less accurate because the ATS did not ask each respondent to report the exact route driven for each trip reported.

Highway trip mileage was estimated using the zip code of the origin and the zip code of the destination and knowledge of frequently used highway routes. This was neither

the longest nor the shortest route and it usually favored rural roads and interstate and U. S. highways over more congested roads in urban areas.

#### **G. OTHER NONSAMPLING ERRORS**

In January 1995 the Census Bureau sent a letter to, and tried to call, sample units. About 25 percent of the sample was selected too late to call and did not receive a letter until March. This part of the sample may report fewer trips in January and February since they were not aware they would

be asked about 1995 trips until their first contact about the ATS was in March.

The ATS interviewing instrument could only pick up a certain number of trips due to space limitations. However, this number was quite large (99 trips per interview) and probably did not have a big impact on the data.

Finally, as in most surveys, the respondents may not give the correct answer because they do not know the answer or they misinterpret the question. Also, the field representative may record the answer incorrectly.

TECHNICAL DOCUMENTATION

APPENDIX D.

## 1995 American Travel Survey Data Collection and Processing Procedures

### SURVEY DESIGN AND METHODOLOGY

#### A. INTRODUCTION

The Intermodal Surface of Transportation Efficiency Act of 1991 (ISTEA) established the Bureau of Transportation Statistics in the Department of Transportation. In December of 1992, congress formally established the BTS to compile, analyze and publish statistics; to develop a long-term data collection program; to develop guidelines to improve the credibility and effectiveness of DOT's statistics; to represent transportation interests in the statistical community; and to make statistics accessible and understandable. At about the same time, the Transportation Research Board of the National Academy of Science in their report, Data for Decisions: Requirements for National Transportation Policy Making concluded that the biggest gap in DOT's intermodal data program was in "flow data." Prior to the 1995 ATS, the most recent source of data on passenger flows is the 1977 National Travel Survey, conducted by the Bureau of the Census as a component of the Census of Transportation. To meet the need for passenger flow data, the BTS conducted the 1995 American Travel Survey (ATS). The Census Bureau implemented the ATS under its authority to conduct a Census of Transportation as stated in Title 13 of the US Code.

#### B. SURVEY PURPOSE

The purpose of the American Travel Survey is to obtain information about travel of persons living in the United States. Economic activity generated from people traveling represents one of the largest and most rapidly growing industrial sectors in the United States. In many areas of the country, travel-related services form the primary industries for providing income and jobs for many of the residents. In view of the importance of travel to the US economy, comprehensive information is essential to government, private industry, and others. The data will be used for policy formation and promotional activities in the general field of travel and tourism.

The main objective of the ATS was to provide policy makers with more accurate and comprehensive information than had previously been available. The ATS provides key data about characteristics of travel and travelers to assist in the formulation and evaluation of initiatives in intermodal transportation. Because policy makers have a particular interest in understanding the differences in travel patterns by state, one objective was to provide detailed information on state-to-state travel and metro-to-metro travel.

To achieve survey objectives, both cross-sectional and longitudinal estimates were needed. Key cross-sectional estimates include the proportions of people traveling on various types of

transportation, intermodal connections, (e.g., taxi from home to the airport) reasons for trips, trip duration, trip distance, and the person and household characteristics that may influence a person’s travel over a period of time. Longitudinal estimates require the collection of information about a person over time. For example, one may measure the cumulative effect of travel on the transportation system or the patterns of change in travel by season.

The ATS was designed to produce reliable estimates at the national and state level for all persons and households in the United States. It also provides data on flows of travel between the states and metropolitan areas for all states and selected metropolitan areas. Data also are available for subgroups defined in terms of characteristics related to travel, such as business, vacation or combined business/pleasure, travel by age, family type, labor force status and income. Subgroups of special interest include, for example, frequent travelers, non-travelers, trips taken by children traveling without a parent, and trips taken by the elderly. The ability to produce reliable estimates at the state level for small subgroups is limited by the sample size.

**C. SURVEY PLANNING AND DESIGN**

**1. Pretest**

The Census Bureau conducted a pretest of the American Travel Survey in August 1994. The primary purpose of the pretest was to test the survey’s computer-based data collection instrument, survey content, telephone number locating ability and data collection procedures. The pretest was designed to detect only major feasibility problems with questionnaire wording and procedures. It was not designed to produce a reading on data accuracy.

The pretest sample consisted of about 400 households in six Primary Sampling Units (PSUs) in two Census Regional Offices — Philadelphia and Kansas City. The Census Bureau collected data for one three-month travel period (June, July and August of 1994). The Census Bureau selected the pretest sample from expired rotations of National Crime Victimization Survey conducted by the Census Bureau. The mode of interview was Computer Assisted Telephone Interviewing (CATI) and paper and pencil interviews by telephone and by personal visit. Because of time constraints, paper and pencil interviews were substituted for the survey’s Computer Assisted Personal Interviewing (CAPI) instrument.

The pretest included mailing out a travel diary in advance of the recall period for use by respondents to record their travel information. They also included a test of the post mail initial call screen telephone research (PMICSTRO) and the post mail initial call screen (PMICS) telephone

operations. The PMICSTRO was instrumental in testing and developing mechanisms to locate current telephone numbers for the sample addresses. The PMICS determined the feasibility of contacting households by telephone at the beginning of the reference period to answer any questions and to encourage participation. In addition, pretest respondents were asked questions about their use of the diary in a cognitive research module.

**2. Survey Design**

**(a) Data Collection Schedule**

Plans call for the ATS to be conducted every five years, in calendar years ending in zero and five. The sample of households was selected at the beginning of calendar year 1995 for interviewing in 1995 which began in April 1995 and continued through March 1996. The sample contained about 80,000 eligible addresses. Sample households were interviewed three to four times during this period, at approximately 3-month intervals. The survey sample was divided into three sub-samples to spread out the interview and processing workloads. These sub-samples are referred to as “waves.” One wave was interviewed each month over a 3-month period. This 3-month period was called a “cycle.” There were four cycles of interviewing throughout the data collection period. The travel reference months for the initial interview ranged from three to six months depending upon the date of the first month of interview. The approximate recall periods for subsequent interviews was between three and four months for the second interviews, three and five months for the third interview, and two to four months for the fourth interview. Figure 1. shows the trip months, the months the trip data were collected, the schedule of interviews by cycle and wave, and, in parenthesis, the approximate number of months of recall.

**Figure 1. Trip Months, Months Data were collected Recall period**

Trip Month	Data Collection Periods (Recall in Months)		
	Wave 1	Wave 2	Wave 3
January	Cycle 1, May (4)	Cycle 1, June (5)	Cycle 1, July (6)
February	Cycle 1, May (3)	Cycle 1, June (4)	Cycle 1, July (5)
March	Cycle 1, May (2)	Cycle 1, June (3)	Cycle 1, July (3)
April	Cycle 1, May (1)	Cycle 1, June (2)	Cycle 1, July (3)
May	Cycle 1 and 2 May (<1)/Aug. (3)	Cycle 1, June (1)	Cycle 1, July (2)
June	Cycle 2 August (2)	Cycle 1 and 2 June (<1)/Sept. (3)	Cycle 1, July (1)
July	Cycle 2 August (1)	Cycle 2 Sept. (2)	Cycles 1 and 2 July (<1)/Oct. (3)
August	Cycles 2 and 3 Aug. (<1)/Nov. (3)	Cycle 2 September (1)	Cycle 2 October (2)
September	Cycle 3 November (2)	Cycles 2 and 3 Sept.<1)/Dec. (3)	Cycle 2 October (1)

October	Cycle 3 November (1)	Cycle 3 Dec. (2)/Jan. (3)	Cycles 2 and 3 Oct. (<1)/Jan. (3)
November	Cycles 3 and 4 Nov. (<1)/Jan. (2)	Cycle 3 December (1)	Cycle 3 January (2)
December	Cycle 4 Jan. (1)/Feb. (2)	Cycles 3 and 4 Dec. (<1), Jan. (1), Feb. (2)/Mar. (3)	Cycle 3 January (1)

**(b) Association of persons with sample addresses**

The survey population for the ATS consists of persons in households and persons in group quarters, such as dormitories, rooming houses, religious groups dwellings, and family-type housing on military bases. Persons living in military barracks and in institutions, such as prisons and nursing homes, were excluded. Persons in the sample at the time of the initial interview were interviewed as long as they remained at the sample address. When a sample person moved to a new address, he or she was not followed. However, persons who moved into a sample address after the initial interview were interviewed and information about any trips taken during the entire reference year was collected. Interviewers collected information from respondents throughout the 1995 survey, as long as respondents remained at the sample address. Persons who left the survey population through death, moving abroad, or going into a prison or other institution were considered out of scope. However, trips taken until the time they became out of scope were collected from a proxy respondent. Persons who moved into the original sample address after the initial interview are interviewed.

College dormitories and fraternity and sorority houses were part of the sample of households. Students living in these units and other types of campus housing are counted as separate households, not as members of their parents' households. Due to the high mobility of the college population, the addresses of college units remained in the sample throughout the survey. As with the sample addresses that were houses, students living in college units during the survey period were interviewed; students moving from these quarters were not followed.

Data were obtained for persons who left the eligible population between interviews. For example, data were obtained for the part of the reference period during which the person was still a part of the survey population. The procedure used for persons who moved out of households occupied by sample persons was to find out how long the person remained in the survey population (from any remaining household members) and to impute data for that period based on demographic information collected previously. In other words, people who became ineligible by moving out of the sample address were represented by

those who moved in. Entire households not interviewed during the first cycle were contacted again during the second cycle to obtain detailed second cycle data and retrospective first cycle data. Retrospective data about travel behavior of persons who were not interviewed for some other reason were collected for use in weighting estimation procedures. Retrospective data from persons who moved into a household during the travel period also were collected for use in weighting estimation procedures. Households not interviewed for any reason during a particular cycle were contacted and interviewed at a subsequent time and asked about travel taken during the missed travel quarter.

**(c) Reinterview program**

The reinterview program consisted of two components; response error reinterview and quality control reinterview.

The response error component allowed Census to assess data quality by measuring the accuracy of the number of trips reported, response variance for the number of trips reported and response variance for the estimates covering trip details. Census conducted response error reinterviews of original CAPI cases using CATI. The quality control component was limited to CAPI interviewers. It served as a quality control check on the interviewers to deter and detect falsification.

**D. DATA COLLECTION**

**1. Procedures**

**(a) The Post Mail Initial Call Screener (PMICS) and Telephone Research Operation**

(PMICSTRO) The PMICS operation was first tested during the ATS pretest in June 1994. The purpose of PMICS was to verify that the telephone number for the sample address was correct and to encourage respondents to complete their travel diary. PMICS call took place in January 1995. In January 1995, the Census Bureau added an operation to verify telephone numbers for sample households for which telephone numbers were listed or to obtain new telephone numbers for sample addresses without listed telephone numbers. This operation, the PMICSTRO, utilized the telephone centers' research tools. These tools included commercially prepared telephone databases for the entire United States as well as a library of phone directories for different locales. The telephone researchers entered the telephone information into the data collection instruments.

During PMICS each household received a phone call to describe the importance of the survey, encourage partici-

pation, explain what the respondents needed to do to record their travel, and to answer questions. Reminder post cards were sent about half way through the three month travel period to remind respondents to fill in the diary when they traveled. About four weeks prior to each cycle of interviewing, reminder letters were sent to each household to remind the respondents to expect a phone call from an interviewer.

#### **(b) Organization and Coordination**

Interviews were conducted by Census Bureau field staff under the supervision of the Census Bureau's 12 decentralized regional offices and by interviewers working under the supervision of the Census Bureau's three centralized CATI facilities. About 35,000 CAPI/CAPI designated household interviews were conducted by field representatives using laptop computers. The CAPI/CAPI interviews were conducted primarily by telephone. Personal visit interviews were used to conduct interviews for CATI/CAPI designated households which could not be contacted by telephone. The remaining 45,000 CATI designated household interviews were conducted by interviewers working with personal computers from Census' three centralized telephone facilities located in Tucson Arizona, Jeffersonville Indiana, and Hagerstown Maryland.

#### **(c) Household Respondent**

Any person 18 or over who was present at the time of the interview was allowed to report for themselves and other household members unless this person was not physically or mentally able to do so. Proxy responses were accepted for persons as long as the respondent was knowledgeable about the other household members' travels. Persons aged 16 or 17 were allowed to report for themselves and other household members if no other knowledgeable person aged 18 and over was present at the time of the interview. Information for all persons aged 15 and under was collected from a knowledgeable adult.

#### **(d) Interview Length**

The length of a household interview depended in part on the number of trips taken by the household members. The 1994 pretest length of interview was, on average, 28 minutes. The average length of interview for the 1995 ATS survey was approximately 25 minutes.

## **2. Materials**

Sample households received a series of advance letters prior to each interview. These included a prenotice letter, survey package (letter, calendar/diary, and map), introductory telephone call, post cards to remind household

members to continue to keep track of their travel information, and reminder letters about one month prior to each subsequent interview. The prenotice letter served as a notice to the respondent that the household had been selected for the survey. It also provided information about the survey. The letters were signed by the Secretary of Commerce and the Secretary of Transportation. The survey package included a second letter containing more detail about the ATS and answers to some frequently asked questions. A travel calendar was included in the survey package. The calendar contained instructions on how to use it to record travel information and space to record the details of travel taken during the travel period. The calendar was used as a recall aid during the interview only. It was not collected from the respondent to fill in responses to survey questions.

The use of records, such as the calendar provided in the survey package, a personal calendar, receipts from airlines, trains, buses, hotels, etc., during the interview may have helped respondents to provide more accurate information. Interviewers were instructed (as part of the instrument) to encourage respondents to take time to get their records for reference during the interview. In addition, interviewers were provided with a United States atlas for their own reference during the interview. In a debriefing of the 1994 ATS pretest sample of 409 respondents, 41 percent said they had referred to their diaries. An additional 25 percent said they used their own records to help in remembering travel information. Because diary usage was lower than expected and based on comments from both the pretest respondents and interviewers, the diary for the actual survey was redesigned to look and function like a wall calendar with large spaces provided to record travel details.

## **3. Data collection instruments**

The primary data collection instrument for the ATS was the questionnaire programmed for the computer in the CASES software language. The instrument was divided into three sections. The first section collected basic demographic information. The second section of the questionnaire obtained travel-related data. The third section obtained general information on the household income, availability of transportation to members of the household and information needed to contact the household for the next cycle interviews. The instrument sections are described in detail below:

#### **(a) Demographic Characteristics**

Demographic information was collected at cycle one

interviews and updated at each subsequent cycle. Questions included relationship to respondent, sex, age, education, marital status, Hispanic origin and race. At the start of the first interview, the interviewer recorded these characteristics for each person residing at the sample address. In subsequent interviews, the interviewer updated the demographic characteristics of persons, e.g., a change in marital status. These data items were carried from cycle to cycle to help the interviewer determine which questions needed to be verified. Persons under the age of 17 were not asked questions about educational attainment. Persons under the age of 15 were not asked about their activity or their marital status. The household telephone number and address were verified and recorded in case callbacks were needed to obtain information from a sample person not present at the time of the interview.

#### **(b) Trip Questions**

Questions included the number of trips away from home, the dates of the trip, and whether or not household members or other persons traveled with the respondent. The questions also included trip origin and main destination, the number of nights stayed, type of lodging, all types of transportation used to get to the destination, the reasons for the trip, and information on stops along the way and side trips taken after reaching the destination. There were no questions about trip related expenditures. A trip, as defined for the respondent, was any trip taken by any member of the household that is 75 miles or more one way. The trip origin was the sample address for household members that lived at the sample address during the entire reference period. For households or persons who moved into the sample address and had taken trips from their previous residence, the previous residence was considered the trip origin. Travel excluded from the survey was: 1) travel by the Armed Forces while on active duty; 2) travel by members of airplane, train, bus or ship crews; and 3) travel by long haul truck drivers.

Trip information was collected in the order in which the respondent reported the trips. Trip questions were sequenced in roughly chronological order. For example, after the main destination and dates of a trip were obtained, the respondent was asked to report the mode of transportation, reason for the trip, travel partners, stops along the way to the main destination, type of lodging at the main destination, overnight side trips away from and returning to the main destination, and stops on the way home. Since some trips were taken by more than one member of the household, information was collected from the respondent first, then information about other household members' trips was collected (excluding trips already reported).

Questions concerning identical trips—trips taken on a regular basis with the same destination, mode, reason for travel and travel party were only asked about once during each interview. A subset of questions that established the dates of the repeated travel were asked for up to 4 of the identical trips. The data collection instrument limited the follow up questions to 4 identical trips. Trip data were imputed during data processing when more than 4 identical trips were reported.

The interview proceeded on a trip by trip and person by person basis until the questionnaire was completed for all trips taken by each household member. If there was one knowledgeable respondent who was familiar with travel taken by some or all members of the household, he or she served as a proxy respondent for other household member's trips by providing trip screener and trip detail information for those household members. If the first adult respondent was not knowledgeable about other household members' trips, another knowledgeable respondent was asked about all person's trips or each household member was asked about their own trips.

In all interviews after the first interview, household members were asked to report about trips taken since the last interview. A data bounding procedure was used to reduce the possibility of reporting trips more than once. In all interviews after the first one, households were asked to report the trips taken since the last interview. Trip data for up to 10 trips reported in the previous interview were included in the data collection instrument for each subsequent interview. Interviewers used the destination and date data from these trips to prevent the respondent from reporting a trip more than once; the respondents did not have access to the bounding data. The interviewers referred to the data when it was apparent that the respondent may have been reporting trip information that had been reported in the previous interview. This procedure defined the reference period in question and reduced the reporting of duplicate trips. Duplicate trips reported in more than one cycle were deleted during the edit process.

In addition to information about the core trip, questions were asked about any stops on the way to the main destination or on the way home from the main destination, as well as side trips from the main destination. Question about stops included a place name of each stop or side trip, duration of stop, the reason for the stop or side trip, modes of transportation, and type of lodging.

#### **c. General Household Information**

The general household information section included questions about employment status, number and type of

vehicles in the household, family or individual income, and best time to call information. If the household composition remained intact over the 4 interview cycles, the household income questions were asked at the time of the first cycle interview only. The best date and time to call information was updated at each interview.

#### 4. Interviewers

##### a. Characteristics and Training

The ATS interviewers were trained in April 1995. A large majority of the interviewers were women. Interviewers were paid on an hourly basis, receiving between \$8.00 and \$12.00 per hour. Training for ATS interviewers included a home study, classroom training, on-the-job training and refresher training. Training sessions included lectures, audiovisual presentations, mock-interviews, and classroom discussion. Trainees received detailed information about their role as an interviewer, concepts and definitions used in the survey, and specific interviewing techniques. As part of the initial training, each new interviewer practiced several interviews. Interviewers received training on new information and on special aspects of the survey as needed during the survey period. Interviewers found to be weak in certain aspects of the survey received supplemental training to help them meet response rate and accuracy standards. The interviewers completed most of their assigned cases during the first two weeks of each month of interviewing.

##### b. Supervision and Quality Assurance

The regional office and telephone center supervisors monitored the work of the interviewers. The headquarters-based response error and quality assurance programs also served to monitor the interviewers. The work of each interviewer was observed by a supervisor who checked the interviewer's performance in establishing rapport with the respondents, asking questions in an appropriate manner, probing, and recording answers accurately. The results of the observations were discussed with the interviewers. Interviewers whose performance was below standard in some respect were observed more often.

The quality control reinterview program served the dual purposes of checking a sample of the work of the individual interviewers and identifying aspects of the field procedures which needed improvement. The quality assurance reinterview sample covered about 5 percent of each interviewer's work each month. The reinterviews, which were completed as soon as possible after the original interview, were conducted on the telephone by a supervisor. Reinterviews were used to determine whether the inter-

viewers conducted the interview at the correct address, classified noninterviews correctly and determined household composition correctly. Several questionnaire items were checked to verify that the interviewer asked these items during the original interview. The results of the reinterview were used to take corrective action, such as supplemental training.

#### E. Data Processing

##### 1. Mileage Estimation

The measurement of trip mileage in the ATS is an important factor for at least two reasons: 1) to determine whether the distance traveled was sufficient to meet the 100-mile trip definition, (although ATS asks respondents to provide information on all trips of 75 miles or more, published data includes information only for those trips of 100 miles or more); and 2) to get an estimate of total miles traveled from origin to destination and return. The trip mileage estimates were calculated by the Center for Transportation Analysis at the Oak Ridge National Laboratory (ORNL) located in Oak Ridge, Tennessee. The trip mileage estimation procedure was a two-step process that involved the assignment of zipcodes to the reported origin and destination names and the coding of the trips' distances. In the first step Census assigned zipcodes to the reported origins and destinations by using computer and clerical processes. ORNL assigned zipcodes for those locations that the Census was not able to code. In the second step the ORNL used transportation network databases to calculate trip mileage. The network distance was used to determine if the trip met the survey's minimum 100-mile one-way distance.

##### 2. Consistency Edits and Imputations

The data were edited to create data consistency and to impute for missing data items. The data were first subjected to processing steps to convert the survey data from the CASES generated output to SAS data sets. The data sets were formatted to contain separate household, person and various trip level files. The data sets were then subjected to edits that improved the survey data by reconciling inconsistencies in the trip data, eliminating trips that had been reported more than once, and replicating identical trips. Demographic and income edits were performed to ensure the consistency of the reported data. Data also were imputed for missing race, sex, relationship, age, origin and income data. The imputation sources were based on the demographic data that was reported in the first cycle of the interviews. Missing trip data such as dates, nights of travel, destinations, lodging, mode and reason for travel also were

imputed based on reported responses in the data collection cycle and the ORNL mileage models. Separate computer and clerical operations were used to assign unique person identifiers across each of the survey cycles. The identifiers serve as a key to link the last cycle interview household, person and trip data over the survey cycles. In addition, a clerical procedure was employed to code write in responses

to the existing answer categories. This served to reduce item nonresponse. Census also used computer and clerical checks to review and approve the various processing stages. Additional computer operations prepared the micro data files for this preliminary release of the data in a tabulated form. Disclosure avoidance programs to suppress identifiable data were not used for the tabulated data.

# AMERICAN TRAVEL SURVEY

## QUESTIONNAIRE FACSIMILE

### SECTION A. INTRODUCTION

A1. Hello. This is (interviewer's name) from the U.S. Census Bureau. May I please speak to (respondent's name)?

- 1 This is correct person
- 2 Correct person called to the phone
- 3 Person not home now or not available now  
[END INTERVIEW]
- 4 Person unknown at this number [END INTERVIEW]
- 5 Person no longer lives there (includes deceased) [END INTERVIEW]
- 6 Noninterview [END INTERVIEW]

A2. I'm calling with regard to the American Travel Survey. We are calling households to ask questions about such things as where and when people travel, the kinds of transportation they use and the purposes of their trips. Before I go any further, I would like to verify that I have reached the correct telephone number and address. Have I reached (number)?

- 1 Yes
- 2 No [END INTERVIEW]
- 3 Refused to verify telephone number

A3. I need to verify that the address there is still (address).

- 1 SAME address
- 2 NOT same address [END INTERVIEW]
- 3 Haven't moved, but address has changed [OBTAIN NEW ADDRESS]
- R Refused to verify address [END INTERVIEW]

### SECTION B. HOUSEHOLD ROSTER

B1. I'm ready to begin the interview with questions about who lives at this address, their ages, how they're related to each other, and other information of that sort. Then, I will ask questions about household travel. First, I will ask you about YOU. Then I will ask questions about other members of your household.

What are the names of all persons living or staying at this address? Start with the name of the person, or one of the persons, who owns or rents this home.

[LIST FIRST AND LAST NAME OF ALL HOUSEHOLD MEMBERS]

B2. (Do you/Does name) usually live at this address?

- 1 Yes
- 2 No

B3. [ASK IF NOT APPARENT] (Are you/is name) male or female?

- 1 Male
- 2 Female

B4. What is (name)'s relationship to (first person listed)?

- 2 Husband/wife
- 3 Child of reference person (include adopted and step children)
- 4 Brother/sister
- 5 Father/mother
- 6 Other relative of reference person
- 7 Non-relative of reference person

B5. I have listed (name/s). I need to be certain that I have listed everyone who usually lives at this address, so just to double check, let me ask you, have I missed...

- any babies or small children?
- any lodgers, boarders or persons you employ who live at this address?
- anyone who usually lives at this address but is away now, traveling for work or business, on vacation, or at school or in a hospital?
- anyone else who usually lives at this address?

- 1 Yes [repeat B1-B4]
- 2 No

---

### SECTION C. DEMOGRAPHIC INFORMATION

---

(REPEAT FOR EACH PERSON LISTED IN PREVIOUS SECTION)

C1. What is (your/name's) date of birth?

Month \_\_\_\_\_, day \_\_\_\_\_, year \_\_\_\_\_

C2. That would make (you/him/her) (age). Is that correct?

- 1 Yes, age is correct
- 2 No, age is not correct [ENTER CORRECT AGE]

C3. (Are you/is (name)) now married, widowed, divorced, separated or single/never married?

- 1 Married
- 2 Widowed
- 3 Divorced
- 4 Separated
- 5 Never married

C4. (Are you/is name) of Spanish or Hispanic origin?

- 1 Yes
- 2 No

C5. What is (your/(name's)) race?

- 1 White
- 2 Black
- 3 American Indian, Eskimo, or Aleut
- 4 Asian or Pacific Islander

5 Other race

C6. What is the highest level of school (you/name) completed or the highest degree (you/name) received?

- 11 Less than high school graduate
- 12 High school graduate (including equivalent, such as GED)
- 21 Some college, but not a college graduate
- 22 Associate degree in college
- 24 Bachelor's degree (For example BA, AB, BS)
- 25 Some graduate or professional school, but no degree
- 26 Graduate or professional school degree (for example, MA, MS, MBA, or MD, DDS, PhD, EdD, JD)

C7. What type of structure do you live in, a house, apartment, mobile home, or some other type?

- 1 House, townhouse, duplex, modular home
- 2 Apartment, flat
- 3 Mobile home
- 4 Nontransient hotel, motel, etc.
- 5 Permanent in transient hotel, motel, etc.
- 6 Rooming house
- 7 Other

C8. Are your living quarters ...

- 1 Owned or being bought by you or someone in your household?
- 2 Rented for cash rent?
- 3 Occupied without payment of cash rent?

---

### SECTION D. TRIP SCREENING QUESTIONS

---

D1. I will ask you a series of questions about ALL TRIPS taken by the people in your household that ENDED between January 1, 1995 and today.

Did you or members of your household take any trips of 75 miles or more from home that ended between January 1 and today?

- 1 Yes
- 2 No
- 3 Don't know/not sure

D2. Did you or any member of your household regularly commute 75 miles or more one way to work or school between January 1 and today?

- 1 Yes [GO TO COMMUTE QUESTIONS]
- 2 No

D3. If you or members of your household completed the travel diary calendar that we sent you early this year or if you have kept track of your trips on some other form, please take time now to get your diary calendar or that information.

D4. How many trips of 75 miles or more from home did (you/name) take that ended between January 1, 1995 and today?

\_\_\_\_\_ [IF 0 SKIP TO E1]

D5. What was the main destination or the farthest place you reached?

City, town, or place \_\_\_\_\_

State or foreign country \_\_\_\_\_

D6. On what date did (you/name) leave home on (your/his/her) trip to (destination)?

Month \_\_\_\_\_, day \_\_\_\_\_, year \_\_\_\_\_

D7. On what date did (you/name) arrive back home from (your/his/her) trip to (destination)?

Month \_\_\_\_\_, day \_\_\_\_\_, year \_\_\_\_\_

D8. How many people went with (you/name) on the trip?

\_\_\_\_\_

D9. Were any of those people living with (you/name) at the time (you/he/she) took the trip?

- 1 Yes
- 2 No [SKIP TO D11]

D10. Which people who were living with (you/name) went with (you/name) on this trip?

First name \_\_\_\_\_

Last name \_\_\_\_\_

[LIST ALL HOUSEHOLD MEMBERS  
WHO WENT ON TRIP]

D11. Did (you/name) make the same trip to (destination) any other time between January 1 and today?

[IF RESPONDENT ASKS, READ: We consider two or more trips that a household member took to be the same if the lodging, mode of transportation, and main reason for the trip are the same. ]

- 1 Yes
- 2 No [SKIP TO D14]

D12. Not counting the trip for which you just reported the dates, how many trips did you take to (destination)?

\_\_\_\_\_

D13. On what dates did (you/name) take (that trip/the first trip/the next trip)?

Begin date: Month \_\_\_\_\_, day \_\_\_\_\_, year \_\_\_\_\_

End date: Month \_\_\_\_\_, day \_\_\_\_\_, year \_\_\_\_\_

D14. Do you have detailed knowledge of (name) travels or do you have a completed diary listing information about (name's) travels?

- 1 Yes
- 2 No [SKIP TO NEXT PERSON]
- 3 Did not travel

D15. The next few questions are about (name's) travels.

NOT COUNTING the trip(s) already reported for other household members, how many trips of 75 miles or more from home did (name) take that ended between

January 1, 1995 and today?

\_\_\_\_\_

[REPEAT QUESTION D5 THROUGH D15 FOR EACH TRIP THAT THE RESPONDENT HAS KNOWLEDGE OF]

---

## SECTION E. COMMUTING TRIPS

---

E1. Did (you/name) regularly commute 75 miles or more one way to work or school since January 1, 1995?

- 1 Yes
- 2 No

E2. What was the destination of (your/his/her) commuting trip?

City, town, or place \_\_\_\_\_  
State or foreign country \_\_\_\_\_

E3. During which months did (you/name) take this commuting trip?

\_\_\_\_\_ January \_\_\_\_\_ February  
\_\_\_\_\_ March

E4. How many days per month did (you/name) usually take this regular commuting trip...

in January? \_\_\_\_\_  
in February? \_\_\_\_\_ etc.

E5. What was the MAIN type of transportation that (you/name) used for the commute?

- 1 Car, pickup truck, or van
- 2 Other truck
- 3 Rental car, truck, or van
- 4 Commercial airplane
- 5 Corporate/personal airplane
- 6 City to city bus
- 7 Charter bus or tour bus
- 8 School bus
- 9 Train
- 10 Taxi
- 11 Ship or boat
- 12 Cruise ship
- 13 Passenger line or ferry
- 14 Recreational boat, sailboat, pleasure boat or yacht
- 15 Recreational vehicle or motor home
- 16 Bicycle
- 17 Motorcycle, moped, or motor bicycle
- 18 Other type of transportation

---

#### SECTION F. TRIP DETAIL

---

F1. The next few questions are about the trip to (destination) that (you/name) took from (leave date) to (return date).

We have the trip to (destination) beginning on (leave date) and ending on (return date) for a total of (number) nights away from home. Is that correct?

- 1 Yes
- 2 No, change leave date
- 3 No, change return date

F2. How many of those nights did you stay in (destination)?

\_\_\_\_\_ nights

F3. While in (destination), in what types of lodging did (you/name) stay?

[ENTER ALL TYPES OF LODGING REPORTED]

- 1 Friend's or relative's home
- 2 Hotel, motel, bed & breakfast, resort
- 3 Rented cabin, condominium, or vacation home
- 4 Owned cabin, condominium, vacation home, or timeshare
- 5 Camper, trailer, recreational vehicle, etc.
- 6 Corporate owned housing
- 7 Conference center (where only participants may stay)
- 8 Military housing
- 9 Dormitory
- 10 Passenger in car, plane, cruise ship, train, etc.
- 11 Slept in parked automobile, van, station wagon, etc.
- 12 Health spa, health resort
- 13 Work or holiday camp, tent, etc.
- 14 Youth hostel
- 15 YMCA, shelter
- 16 Other

F4. Tell me ALL the types of transportation that (you/name) used for a distance of 75 miles or more during the entire trip to (destination) and the return trip home?

[ENTER ALL TYPES OF TRANSPORTATION REPORTED]

- 1 Car, pickup truck, or van
- 2 Other truck
- 3 Rental car, truck, or van
- 4 Commercial airplane [ASK 4A AND 4B]

4A. Did you use regularly scheduled airline service or a charter flight?

- 1 regularly scheduled
- 2 charter flight
- 3 both

4B. Was the airline a U.S. or a foreign carrier?

- 1 U.S.
- 2 foreign
- 3 both

- 5 Corporate/personal airplane
- 6 City to city bus
- 7 Charter bus or tour bus
- 8 School bus
- 9 Train
- 10 Taxi
- 11 Ship or boat
- 12 Cruise ship
- 13 Passenger line or ferry
- 14 Recreational boat, sailboat, pleasure boat or yacht
- 15 Recreational vehicle or motor home
- 16 Bicycle
- 17 Motorcycle, moped, or motor bicycle
- 18 Other type of transportation

F5. [IF MORE THAN ONE TYPE OF TRANSPORTATION REPORTED IN F4] What type of transportation did you use for most of the distance to travel from home to (destination)?

[REPEAT LIST OF TRANSPORTATION MODES]

F6. [IF AIRPLANE, TRAIN, BUS, SHIP/CRUISE SHIP]

Please tell me the name of the (airport/station/pier/terminal) that (you/name) departed from.

Airport, etc. \_\_\_\_\_  
City \_\_\_\_\_  
State \_\_\_\_\_

F7. [IF AIRPLANE, TRAIN, BUS, SHIP, CRUISE SHIP TRIP]

What type of transportation did (you/name) use to get to the (airport/bus station/train station/pier or ferry terminal) to begin (your/his/her) trip?

- 1 Own car, truck, or van—parked at the (airport/station/pier or terminal)
- 2 Car, truck, or van—dropped off by another person
- 3 Motorcycle, moped, or motorbicycle
- 4 Taxi
- 5 Limousine or shuttle bus

- 6 Public bus
- 7 Subway/elevated rail or commuter rail
- 8 Walked
- 9 Other type of transportation
- 10 None

F8. [IF AIRPLANE, TRAIN, BUS, SHIP/CRUISE SHIP]

Once (you/name) arrived at your destination, what was the main type of transportation (you/name) used to from the (airport/bus station/train station/pier/ferry terminal) to your lodging/work place or stopping point?

- 1 Picked up in privately owned car, truck, or van
- 2 Rented car, truck, or van
- 3 Taxi
- 4 Limousine or shuttle bus
- 5 Public bus
- 6 Subway/elevated rail or commuter rail
- 7 Walked
- 8 Other type of transportation
- 9 None

F9. Was this a vacation trip?

- 1 Yes
- 2 No

F10. What was the main reason that (name/you/you and other household members) took the trip TO (destination)?

- 1 Business
- 2 Combined business/pleasure
- 3 Convention, conference, or seminar
- 4 School-related activity
- 5 Visit relatives or friends
- 6 Rest or relaxation
- 7 Sightseeing, or to visit an historic or scenic attraction
- 8 Outdoor recreation (sports, hunting, fishing, boating, camping, etc.)
- 9 Entertainment (attend the theater, concert, sports event, gambling, etc.)
- 10 Shopping
- 11 Personal, family affairs, medical (wedding, funeral, health treatment etc.)
- 12 Other reason

F11. Did (you/name) go to any other places or stop to change transportation on your way TO (destination)?

- 1 Yes [GO TO STOP QUESTIONS]
- 2 No

F12. During (your/his/her) stay in (destination) did (you/name) take any overnight trips and then return to (destination)?

- 1 Yes [GO TO SIDE-TRIP QUESTION]
- 2 No

F13. On what date did (you/name) leave (main destination) to RETURN HOME?

Month \_\_\_\_\_  
Day \_\_\_\_\_

F14. What type of transportation did (you/name) use for most of the distance to RETURN HOME from (destination)?

- 1 Car, pickup truck, or van
- 2 Other truck
- 3 Rental car, truck or van
- 4 Commercial airplane [ASK 4A AND 4B]

4A. Did you use regularly scheduled airline service or a charter flight?

- 1 regularly scheduled
- 2 charter flight
- 3 both

4B. Was the airline a U.S. or a foreign carrier?

- 1 U.S.
- 2 foreign
- 3 both

- 5 Corporate/personal airplane
- 6 City to city bus
- 7 Charter bus or tour bus
- 8 School bus
- 9 Train
- 10 Taxi
- 11 Ship or boat
- 12 Cruise ship

- 13 Passenger line or ferry
- 14 Recreational boat, sailboat, etc.
- 15 Recreational vehicle or motor home
- 16 Bicycle
- 17 Motorcycle, moped, or motor bicycle
- 18 Other type of transportation

F15. Did (you/name) go to any other places or stop to change transportation on (your/his/her) RETURN TRIP home from (destination)?

- 1 Yes [GO TO STOP QUESTIONS]
- 2 No

---

### SECTION G. SIDE TRIPS AND STOPS

---

G1. Please tell me the name of each place where (you/name) went or stopped on (your/his/her) (way TO/ way home FROM) (destination). Please give me the places in their order of occurrence.

PROBE: Any other places or stops on (name's/ your) way (to/from) (destination)?

City, town or place \_\_\_\_\_  
State \_\_\_\_\_

G2. Please tell me the name of each place where (you/name) took an overnight trip during (your/his/her) stay in (destination).

PROBE: Any other overnight trips during (name's/your) stay in (destination)?

City, town or place \_\_\_\_\_  
State or foreign country \_\_\_\_\_

G3. How many nights did (you/name) stay at (stop/sidetrip destination)?

\_\_\_\_\_

G4. While in (stop/sidetrip destination), in what types of lodging did (you/name) stay?

- 1 Friend's or relative's home
- 2 Hotel, motel, bed & breakfast, resort
- 3 Rented cabin, condominium, or vacation home
- 4 Owned cabin, condominium, vacation home, or timeshare
- 5 Camper, trailer, recreational vehicle, tent, etc.
- 6 Corporate owned housing

- 7 Conference center (where only participants may stay)
- 8 Military housing
- 9 Dormitory
- 11 Slept in parked automobile, van, station wagon, etc.
- 10 Passenger in car, plane, cruise ship, train, etc.
- 12 Health spa, health resort
- 13 Work or holiday camp, tent, etc.
- 14 Youth hostel
- 15 YMCA, shelter
- 16 Other

G5. How many nights did (you/he/she) spend in each type of lodging?

G6. What were (your/name's) reasons for stopping at (stop/side-trip)?

- 1 Business
- 2 Combined business/pleasure
- 3 Convention, conference, or seminar
- 4 School-related activity
- 5 Visit relatives or friends
- 6 Rest or relaxation
- 7 Sightseeing, or to visit an historic or scenic attraction
- 8 Outdoor recreation (sports, hunting, fishing, boating, camping, etc.)
- 9 Entertainment (attend the theater, concert, sports event, gambling, etc.)
- 10 Shopping
- 11 Personal, family affairs, medical (wedding, funeral, health treatment etc.)
- 12 Spend the night
- 13 Transfer from one plane to another, from one train to another, etc.
- 14 Change to a different type of transportation [ASK G7]
- 15 Drop off or pick up passenger
- 16 Other reason

G7. What type of transportation did you (change to/use for most of the distance) (at the stop/on the trip to side-trip destination)?

- 1 Car, pickup truck, or van
- 2 Other truck
- 3 Rental car, truck, or van

- 4 Commercial airplane
- 5 Corporate/personal airplane
- 6 City to city bus
- 7 Charter bus or tour bus
- 8 School bus
- 9 Train
- 10 Taxi
- 11 Ship or boat
- 12 Cruise ship
- 13 Passenger line or ferry
- 14 Recreational boat, sailboat,
- 15 Recreational vehicle or motor home
- 16 Bicycle
- 17 Motorcycle, moped, or motor bicycle
- 18 Other type of transportation

---

## SECTION H. EMPLOYMENT, VEHICLES AND INCOME

---

H1. To complete the interview, I would like to ask a few more general questions about (you/name) and (your/his/her) household.

During most of the time between January 1, 1995 and today (were/was) (you/name)...

- 1 Working at a full-time job?
- 2 Working at a part-time job?
- 3 Looking for work?
- 4 In the Armed Forces?
- 5 A homemaker?
- 6 Going to school?
- 7 Retired?
- 8 Doing something else?

H2. How many vehicles of the following types were owned, or available for regular use by members of this household between January 1 and today?

- Van (mini, cargo, passenger)
- Utility vehicle (Bronco, Blazer, 4Runner, Jeep, etc.)
- Pickup truck
- Automobile
- Other truck
- RV (recreational vehicle)
- Motorcycle
- Other

H3. What was the TOTAL COMBINED (FAMILY/PERSONAL) income received from jobs, businesses,

and all other sources for 1994 for (you/reference person's name)?/(you/reference person's name) and their household members?)

- 1 Less than \$10,000
- 2 \$10,000–\$14,999
- 3 \$15,000–\$24,999
- 4 \$25,000–\$29,999
- 5 \$30,000–\$39,999
- 6 \$40,000–\$49,999
- 7 \$50,000–\$59,999
- 8 \$60,000–\$74,999
- 9 \$75,000–\$99,999
- 10 \$100,000–\$124,999
- 11 \$125,000–\$149,999
- 12 \$150,000 or more

H4. Thank you for your cooperation. This concludes our call. If you have any questions or later find you need another travel diary, call us on the toll free number found in the travel diary that we will send you. You've been very helpful.

# **American Travel Survey**

Please use this diary calendar to help remember information about the trips you and other members of your household take during 1995. When our field representative calls to interview your household, the calendar will help you answer questions about trip dates, places you visited, side trips from your destination, and who went with you.

We are interested in collecting information on all trips that are more than 75 miles one-way away from your home. We will ask about trips for each member of your family or household.

Your help is needed to identify how, where, and when people in the United States travel for pleasure or business. For each household, we expect filling out the travel diary to take from 5 to 60 minutes during the year, depending on the number of persons in the household and the number of trips they take, with an average of 25 minutes per household. We can improve our nation's transportation systems by understanding the travel patterns of the American public.

The Census Bureau is conducting the American Travel Survey for the Department of Transportation. Information on your travel patterns can help to:

- evaluate existing transportation facilities and services,
- estimate future needs for highway, high-speed rail systems, and air service,
- plan improvements for travel facilities and accommodations,
- develop transportation safety programs, and
- encourage economic development where travelers need services.

**Thank you for your cooperation!**

# INSTRUCTIONS

Please record information about your trips on the monthly calendars that follow.  
Answer these questions for each trip.

## 1. When did you travel?

Indicate each day that you or any member of your household is on a trip that is more than 75 miles from home.

## 2. Where did you travel?

Write the name of the place or places you traveled to and through from the date you left your home to the date you returned home from your trip.

Include your main destination and the names of places you stopped on the way there and on your return trip.

Also, include side trips that you took away from your destination if they were 75 miles or more from the destination or if they involved an overnight stay.

Answer these questions:  
1. When did you travel?  
2. Where did you travel?

# **TRAVEL TRIVIA**

Americans take about 1 billion person trips each year.

About 3/4 of American travelers drove their own vehicles.

About 1/4 of all trips are for business purposes.

Travelers spent nearly \$400 billion in 1993.

On average, each traveler is away from home 4 nights.

The travel and tourism industry generated 6 million jobs in the United States.

More than \$52 billion was generated from Federal, state and local tax revenues.

**THANK YOU FOR YOUR COOPERATION!**
