

November 19, 2001

LICENSEE: FirstEnergy Nuclear Operating Company

FACILITY: Davis-Besse Nuclear Power Station, Unit 1

SUBJECT: MEETING SUMMARY OF NOVEMBER 14, 2001, TO DISCUSS THE
LICENSEE'S RESPONSE TO BULLETIN 2001-01

On November 14, 2001, Nuclear Regulatory Commission (NRC) management and staff met in Rockville, Maryland, with representatives of FirstEnergy Nuclear Operating Company and their contractors. The meeting was requested by the licensee in order to supplement their response to NRC Bulletin 2001-01, "Circumferential Cracking of Reactor Pressure Vessel Head Penetration Nozzles." The licensee has proposed deferring inspections recommended by the bulletin to their 13th refueling outage which is scheduled to begin in March 2002. The bulletin recommends that inspections be performed prior to December 31, 2001. A list of the meeting participants is included as Enclosure 1. The meeting handouts are included as Enclosure 2.

As described in the licensee's handouts, the purpose of the meeting was to (1) discuss the licensee's revised probabilistic safety assessment based upon comments received from the staff during the meeting of November 9, 2001, (2) discuss comparisons between plant-specific allowable flaw size and flaw size as calculated by NRC (EMC2) and Electric Power Research Institute MRP-44, and (3) answer NRC questions concerning the licensee's responses to the staff's requests for additional information and other submittals.

At the conclusion of the meeting, the licensee offered to docket any additional information that the staff considered necessary to complete their review. In addition, the licensee requested their desire to obtain a copy of the staff's proprietary technical assessment report and suggested that a confidentiality agreement be prepared to expedite its release.
