

Trempealeau National Wildlife Refuge, established in 1936, contains over 6,226 acres of rolling prairies, rich wetlands and bottomland forests which support a variety of wildlife. A link in the chain of refuges along the Mississippi Flyway extending from Canada to the Gulf of Mexico, Trempealeau was set aside as a resting and breeding ground for migratory birds and other wildlife.

The isolated backwaters of the refuge provide critical habitat for migrating waterfowl and other birds during peak spring and fall migrations. Large rafts of dabblers and divers such as ruddy ducks, ring-necked ducks, scaup, and blue-winged teal can often be seen during migration from the observation deck spotting scopes adjacent to the refuge office. Also in the fall, the refuge plays host to tundra swans and white pelicans, a birdwatcher’s favorite. Birders may also catch a glimpse of a variety of migrating songbirds, such as yellow-rumped warblers, orchard orioles and Henslow’s sparrows. The refuge offers excellent birding opportunities year round to both the serious and casual birder. Current bird sighting information is available by calling 608/539-2311, then accessing the refuge information line.

This bird list contains 263 species which have been recorded by refuge personnel and visiting ornithologists. Another 21 birds, listed under “Accidental” birds have been reported but are not normally expected to be present.

This bird list is in accordance with the Sixth American Ornithologist’s Union Checklist of North American birds as amended.
