

If you are operating a MAC desktop and your OS version is NOT Leopard this viewer from grants.gov has provided success to EIE users. Please read the information below carefully before installing it on your Macintosh PC. This link is provided for your information only. NRC DOES NOT PROVIDE SUPPORT FOR THIS INSTALLATION NOR ITS EFFECT.

Download the IBM Workplace Forms (PureEdge) Viewer for Macintosh

IBM has provided Special Edition Mac Viewers for PPC and Intel that are now available for download. You may wish to use this software if you do not have access to a Windows machine, Windows emulation software, or the Citrix server.

Please note that limitations of this early release software may include:

- Occasional crashes and subsequent loss of any unsaved data
- Inability to run on Mac OS version prior to 10.4.6
- No current support for screen readers for visually impaired users
- The viewer is installed at the root level of the user account home directory. (e.g. /Users/jsmith/). Do not move the application folder to any other location as it will not work.

Please consider these limitations and warnings and also read the release notes carefully before using this software. The Intel and PPC-based viewers below were developed by IBM as a permanent solution to the Mac Security Upgrade and this replaces the temporary fix that IBM had previously provided.
