

Tips for a Healthy Life

Eat Healthy

"An apple a day keeps the doctor away." There's more truth to this saying than we once thought. What you eat and drink and what you don't eat and drink can definitely make a difference to your health. Eating five or more servings of fruits and vegetables a day and less saturated fat can help improve your health and may reduce the risk of cancer and other chronic diseases. Have a balanced diet, and watch how much you eat.

Maintain a Healthy Weight

Obesity is at an all time high in the United States, and the epidemic may be getting worse. Those who are overweight or obese have increased risks for diseases and conditions such as diabetes, high blood pressure, heart disease, and stroke. Eat better, get regular exercise, and see your health care provider about any health concerns to make sure you are on the right track to staying healthy.

Get Moving

More than 50 percent of American men and women do not get enough physical activity to provide health benefits. For adults, thirty minutes of moderate physical activity on most, preferably all, days of the week is recommended. It doesn't take a lot of time or money, but it does take commitment. Start slowly, work up to a satisfactory level, and don't overdo it. You can develop one routine, or you can do something different every day. Find fun ways to stay in shape and feel good, such as dancing, gardening, cutting the grass, swimming, walking, or jogging.

Be Smoke-Free

Health concerns associated with smoking include cancer, lung disease, early menopause, infertility, and pregnancy complications. Smoking triples the risk of dying from heart disease among those who are middle-aged. Second-hand smoke - smoke that you inhale when others smoke - also affects your health. If you smoke, quit today! Helplines, counseling, medications, and other forms of support are available to help you quit.

Get Routine Exams and Screenings

Sometimes they're once a year. Other times they're more or less often. Based on your age, health history, lifestyle, and other important issues, you and your health care provider can determine how often you need to be examined and screened for certain diseases and conditions. These include high blood pressure, high cholesterol, diabetes, sexually transmitted diseases, and cancers of the skin, cervix, breast, prostate, and colon. When problems are found early, your chances for treatment and cure are better. Routine exams and screenings can help save lives.

Get Appropriate Vaccinations

They're not just for kids. Adults need them too. Some vaccinations are for everyone. Others are recommended if you work in certain jobs, have certain lifestyles, travel to certain places, or have certain health conditions. Protect yourself from illness and disease by keeping up with your vaccinations.

Manage Stress

Perhaps now more than ever before, job stress poses a threat to the health of workers and, in turn, to the health of organizations. Balancing obligations to your employer and your family can be challenging. What's your stress level today? Protect your mental and physical health by engaging in activities that help you manage your stress at work and at home.

Know Yourself and Your Risks

Your parents and ancestors help determine some of who you are. Your habits, work and home environments, and lifestyle also help to define your health and your risks. You may be at an increased risk for certain diseases or conditions because of what you do, where you work, and how you play. Being healthy means doing some homework, knowing yourself, and knowing what's best for you... because you are one of a kind.

Be Safe - Protect Yourself

What comes to mind when you think about safety and protecting yourself? Is it fastening seat belts, applying sunscreen, wearing helmets, or having smoke detectors? It's all of these and more. It's everything from washing your hands to watching your relationships. Did you know that people at work die most frequently from homicides, motor vehicle incidents, falls, and machine-related injuries? Take steps to protect yourself and others wherever you are.

Be Good to Yourself

Health is not merely the absence of disease; it's a lifestyle. Whether it's getting enough sleep, relaxing after a stressful day, or enjoying a hobby, it's important to take time to be good to yourself. Take steps to balance work, home, and play. Pay attention to your health, and make healthy living a part of your life.
